## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Dismissal of Quebec Coal Combine Appeal

THE Judicial Committee of the Privy Council on June 6 dismissed the application of the Canadian Import Company and other Quebec coal companies for leave to appeal to the Privy Council from their conviction under the Combines Investigation Act and section 498 of the Criminal Code. The hearing of the application was commenced on March 18 and concluded the middle of April. Lord Sankey in delivering the judgment of the Privy Council on June 6 stated:

"Such appeals (criminal) must be essentially matters of Canadian concern, and the regulation and control of such appeals would thus seem to be a prime element of Canadian sovereignty as appertaining to matters of justice. Their Lordships see no valid reason since the Statute of Westminster why the power to regulate or prohibit this type of appeal should not be held to be vested in the Dominion Parliament".

The case was the first test of the constitutional validity of the enactment of the Canadian Parliament in 1933 intended to abolish appeals to the Privy Council from convictions by the Canadian courts in criminal matters.

The last judgment in the court cases concerning the Quebec coal combine was given on June 21, when the Quebec Court of Appeals dismissed the appeal entered by the Hartt and Adair Coal Company, Limited, and four other coal companies against their convictions in connection with offences similar to those of the first group of participants in the combine. The conviction of the five firms tried in the second group, including the Hartt and Adair company and Scotch Anthracite Coal Company, was reported in the *LABOUR GAZETTE*, February, 1935, p. 145.

Mr. Justice Walsh on June 21 delivered the unanimous judgment of the Appeal Court confirming the convictions. The members of the Court who heard the case, in addition to Mr. Justice Walsh, were Sir Matthias Tellier, Chief Justice; Mr. Justice Bernier, Mr. Justice Le-tourneau, and Mr. Justice Galipeault. The final judgment stated in part:

"The crime intended and charged was continuous, though its phases and incidents changed; the intent was always to reap benefits unduly from the consumer.

"...The monopolists needed the distributors, and vice versa, to reach the consumer. The original parties and subsequent adherents, adopting the principle of the former, joined

to create a monopoly in a commodity, in order to maintain their profits. Their success is immaterial.

"Had these machinations of subsequent adherents not been for the furtherance of the common design of the basic contracts, these manipulations if independently undertaken would have been the overt acts of another conspiracy. It would then have been proper for this appellant [Hartt and Adair Coal Company] to complain that the provisions of law were not directed against the same crime. The submission cannot be entertained in the present instance, though it was strongly urged.

"...The various motives of the companies, their unequal shares, their different participation, did not imply a different end, which finally was to effect injury to the public.

"...All of the accused companies of the first as well as of the second group conspired to commit the offences for which they were condemned. I would confirm all the convictions. This is the unanimous judgment of the Court."

The Quebec coal combine case, which related to Canadian importers and distributors of British anthracite coal, was the first case under the Combines Investigation Act attempted to be carried to the Privy Council, other than that in 1931 when the Privy Council upheld the constitutional validity of the statute. In the course of the coal combine prosecutions fines totalling \$43,500 were imposed. Ten firms were convicted as members of the combine and one company was acquitted.

### Subcontractors' Right Under Woodmen's Lien Act

A subcontractor brought action under the Woodmen's Lien Act, R.S., N.S. 1923, c. 251, claiming a lien upon a lumber company for \$186.63. The company denied the indebtedness and submitted that the plaintiff was not entitled to a lien as he did not work as an independent contractor.

The Nova Scotia County Court Judge in reviewing the case found that a contractor had made an agreement with a subcontractor (the plaintiff) whereby the latter was to saw logs at \$3 per thousand. The plaintiff employed eleven men in the operation and from time to time personally engaged in the work. The plaintiff's name did not appear on the pay-roll but he personally laboured as indicated for at least 75 days.

In giving his decision the County Court Judge referred to legislation somewhat similar to the Nova Scotia Woodmen's Lien Act, which exists in British Columbia, Alberta, Ontario, New Brunswick, and the United States. In conclusion the judge states:—

"In my opinion I cannot do better than quote from the judgment of Emery, J., in giving the unanimous judgment of a Court consisting of six Judges in *Littlefield v. Morrill* (1903), 97 Me. 505. The Maine statute is similar in this respect to the Nova Scotia Act. He says:—

"It is true, these plaintiffs performed some physical labour... but they did not so do under the direction of an employer and for mere wages. They had not merely hired out their personal labour. They had taken a contract... and were independent in their method of doing it, and were carrying out their contract largely through the labour of others employed by them... They were not mere labourers working for fixed wages, the rate of which would not be varied by circumstances. When they laboured themselves it was not for wages, but to increase profits by saving wages.

"Let us suppose that the plaintiff takes a contract for \$1,000. The wages due to his men for which they take liens amount to \$1,500 and he himself at a reasonable rate of pay on a quantum meruit has earned \$200. Is it conceivable that in breach of this contract he could compel the person who made the contract with him to stand by while the plaintiff abandons his contract and \$1,700 is recovered of which he received \$200 when he had entered into a contract to do the whole work for \$1,000. With deference I adopt the words of Emery, J., above quoted".

The plaintiff's claim for a lien was dismissed.

*Blade vs Nelson et al, Dominion Law Reports, 1935, Vol. 2, page 655.*

#### **Employer Cannot Withhold Part of Employees' Wages as Loan to the Company**

The appellant firm, a candy and biscuit manufactory, required its employees to sign

an agreement whereby, in order to help the latter financially and at the same time provide a savings fund for themselves, they agreed to loan the company a given percentage of their hourly rate of wages, such loans bearing interest at the current savings bank's rate. As the business of the company improved, the deduction from the hourly rate would be lowered. The employee could not claim for a period of ten years the amounts thus loaned the company, so long as he or she was paid the interest provided on such loans. No dividends were to be paid executives of the company until all loans were repaid.

The Quebec Minimum Wage Commission, considered such an agreement as a violation of sections 11, 11a and 11b of the provincial minimum wage legislation, and instituted legal proceedings against the company concerned.

The case was tried by Justice Marin, of the Court of Sessions of the Peace, who found the defendant company guilty. On appeal by the company, the Court of King's Bench (Criminal side) upheld the lower court's decision and found as follows:—

"Any company summoned for violation of the Women's Minimum Wage Act can not advance as a defence plea an agreement signed by an employee by which said employee gives to the company by way of a loan the difference between the actual wages paid and the minimum rate of wages provided, the loan to be repayable when the financial condition of the firm would allow, but at any rate within a period of ten years. Furthermore, such an agreement between an employer and an employee whose wages are under \$20 per week is null and void for the reason that such an employee thereby becomes an associate member of the firm."

The Court set aside the appeal with costs.

*Stuart Biscuits Co. vs. Rex and Justice Marin, mis-en-cause, 1935, Rapports judiciaires de Québec (Cour supérieure), vol. 73, p. 133.*

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of July showed further improvement, according to the Dominion Bureau of Statistics, which tabulated returns from 9,323 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 934,262 workers, or 18,516 more than they employed on June 1. The index (based upon the average for the calendar year 1926 as 100), stood at 99·5, compared with 97·6 in the preceding month and 101·0 on July 1 of last year. On the date in the thirteen preceding years, the index was as follows: 1933, 84·5; 1932, 88·7; 1931, 103·8; 1930, 118·9; 1929, 124·7; 1928, 117·7; 1927, 109·7; 1926, 105·0; 1925, 98·0; 1924, 97·1; 1923, 100·7; 1922, 92·2 and 1921, 88·6. The increase on July 1, 1935, was smaller than that recorded on July 1, 1934, and was also less than the average gain between June and July in the experience of the last fourteen years.

At the beginning of July, 1935, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 15·4, as contrasted with percentages of 15·9 at the beginning of June, 1935, and with 18·0 at the beginning of July, 1934. The percentage for July was based on the reports tabulated from 1,684 labour organizations, including a membership of 161,789 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada during June, 1935, showed a decline in the total placements effected when compared both with the previous month and also with the corresponding month a year ago, the service group being mainly responsible for the loss under the former comparison and construction and maintenance, wherein less relief work had been provided, under the latter. Vacancies in June, 1935, numbered 27,721, applications 51,129 and placements in regular and casual employment 25,889.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was little changed from the level of the

previous month, the figures being \$15.94 for July and \$15.95 for June. Comparative figures for certain previous dates are \$15.84 for July, 1934; \$15.41 for June, 1933 (the low point in recent years); \$21.26 for July, 1930; \$21.53 for July, 1921; \$26.92 for July, 1920 (the post-war peak); and \$14.17 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was unchanged in July from the level of the previous month at 71·5 as compared with 72·5 for July, 1934; 63·5 for February, 1933 (the low point in recent years); 97·2 for July, 1929; 100·1 for July, 1926; 104·8 for July, 1921; 164·3 for May, 1920 (the post-war peak); and 64·4 for July, 1914.

The latest information available reflecting industrial conditions in Canada is given in a table on page 712. The index of the physical volume of business was nearly four per cent lower in June than in May when the highest level since 1930 was recorded. Of the principal factors in the index, construction and trade employment were higher than in the previous month while mineral production, manufacturing, electric power output, carloadings, imports and exports declined. The business index was 3½ per cent higher in June than in the same month last year. In this comparison mineral production, construction, electric power output, trade employment and imports were higher while manufacturing, carloadings and exports declined. Information available for July shows employment at a higher level than in June but lower than in July, 1934, while carloadings numbered less than in June but more than in July, 1934. Gross earnings of the Canadian National Railways, contracts awarded and sugar manufactured showed gain both as compared with the previous month and with July last year.

During July there were on record twenty-five strikes and lockouts involving 7,355 workers, causing a time loss of 67,888 man working days. Three of the disputes accounted for over one-half of the workers involved and for most of the time loss, namely a strike of longshoremen at Vancouver, a sympathetic strike of water transport workers at Vancou-

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending July 27, 1935 and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending July 13, June 15, and May 18, 1935; July 14, June 16, and May 19, 1934.

(7) MacLean's Building Review.

ver and other ports, and a strike of loggers in northern Ontario. In June the figures were somewhat lower, fourteen disputes, involving 4,997 workers, causing 57,081 days' time loss, also due chiefly to the three disputes above mentioned. In July, 1934, there were thirty-two disputes, involving 11,463 workers with a time loss of 71,763 working days, the most important strike being that of men's clothing factory workers at Montreal. Of the twenty-five disputes in July, sixteen were recorded as terminated, two resulting in favour of the workers involved, seven in favour of the employers concerned, compromise settlements being reached in five cases, while the results of two were recorded as indefinite. The disputes untermated at the end of the month numbered nine and involved some 2,250 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off or definitely declared terminated by the unions involved.

**"Labour Legislation in Canada in 1934"** The sixth annual supplement to the volume "Labour Legislation in Canada as existing December 31, 1928" has been published by the Department of Labour under the title: "Labour Legislation in Canada, 1934." This supplement follows the lines of former reports, containing the text of the various Dominion and Provincial labour laws, together with certain Orders in Council and a number of regulations made under statutory authority, notes being added to the text to interpret new amendments. The legislation of 1934 covers a wide range of subjects, including the protection of wages, hours of labour, the employment of women and children, workmen's compensation, unemployment relief and land settlement, safety and health of workers, licensing of workmen, pensions, insurance, etc. New legislation in Canada is outlined in the LABOUR GAZETTE on the conclusion of each session.

The main volume in this series may be obtained from the Department of Labour for one dollar, the charge for each of the six annual supplements being 25 cents.

#### **Personnel of Commission administering Social Insurance Act**

sion to administer this enactment. On July 20, the personnel of this Commission was announced to be as follows: Hon. Gordon S. Harrington, former Prime Minister of Nova

According to the terms of the Employment and Social Insurance Act (LABOUR GAZETTE, February, 1935, page 135; July, 1935, page 617) provision was made for the appointment of a commis-

Scotia, chairman; Mr. Tom Moore, president of the Trades and Labour Congress of Canada, workers' representative; and Mr. N. Roméo Beaudet, an executive of the Confederation Life Assurance Company, employers' representative. The commissioners will hold office for ten years, and must devote their whole time to the duties of their office.

They are to undertake investigations for the purpose of making proposals to the Governor in Council for the extension of insurance to employments at present excepted from the Act, for assisting during unemployment persons who are ordinarily employed in excepted employments and those who, while ordinarily employed in insurable employment, are not for the time being entitled to benefit, and for providing, in co-operation with educational authorities or otherwise, physical and industrial training and instruction for the unemployed with a view to their rehabilitation. The Commission is to organize and maintain an employment service for the Dominion with regional divisions and employment offices within each division.

#### **Dividends of co-operatives exempt from Criminal Code Amendment**

In the amendment made to the Criminal Code at the recent session of Parliament whereby it is made an offence for any person engaged in commerce or industry to discriminate in any sale against competitors of the purchaser by granting rebates or discounts not available to such competitors, it was stipulated that the provision should not prevent a co-operative society of producers or consumers, or a co-operative wholesale society, returning to its members dividends on their purchases from the society or on their sales to it. The section was added to the Criminal Code on the recommendation of the Royal Commission on Price Spreads.

#### **Bulletin of Industrial Law Research Council**

The first bulletin of the Industrial Law Research Council of the Workers' Educational Association of Ontario has recently been published in mimeograph form. The author (Professor N. A. MacKenzie) describes briefly the machinery of the Organization, the composition of the Governing Body and of the International Labour Conference, pointing out the part taken by Canada in both. In view of the position taken by the Government of Canada at the recent session of Parliament as to the legislative powers of the Dominion Parliament with respect to the draft conventions of the International Labour Conference, Professor MacKenzie sets out extracts from the judgments

of the Judicial Committee of the Privy Council in 1931 in the aerial navigation and radio cases on which the opinion of the Government is based. In both these cases, the Privy Council found that the Dominion had exclusive jurisdiction to give effect to the two international treaties concerned. An outline is given, also, of the constitutional aspect of the draft conventions as it formerly was considered to be and the action taken by the Dominion in regard to those deemed to be within federal jurisdiction.

### Unemployment among young people in Toronto

A survey of unemployment among young people in Toronto was recently undertaken at the request of the Mayor's Youth Committee with the co-operation of the Employment Service of Canada. Registration centres were set up in the Y.M.C.A.'s and in some of the churches and it is estimated that 75 per cent of young men, between 16 and 22 years of age, looking for jobs in the city of Toronto, presented themselves at the centres and outlined their training and experience.

Of the 3,293 thus registered, 1,331 sought positions as workers in factories, 402 in offices, 326 as improvers, 275 auto-mechanic chauffeurs, 266 in industrial plants, 163 as sales clerks, 160 as messengers, 128 technical positions, 51 labourers, 41 stenographers, 17 building trades, 10 typists, 10 professional, and 113 miscellaneous.

Eight of the 3,293 were university graduates, 1,183 had technical school training and 629 had completed senior fourth.

### Employment on two-day shift system in Great Britain

A report has recently been issued by the Home Office Departmental Committee of Great Britain which enquired into the employment of women and young persons on the two-shift system. The committee recommend that the temporary provisions of the Act of 1920 should be made permanent, but with certain modifications of law and procedure. The temporary provisions allow employment of women and young persons of the age of sixteen years and upwards in factories and workshops on a system of two day-shifts between the hours of 6 a.m. and 10 p.m.

In the opinion of the Committee the value of the system to industry for a variety of purposes has been clearly established. In particular, it has enabled many branches of industry to meet changing conditions of trade and employment and has facilitated important new developments. More especially in the highly mechanized industries it helps manufacturers to reduce costs of production and to

meet foreign competition. As a method of meeting seasonal rushes of work, short notice orders demanding quick delivery, break-downs, and other forms of pressure, it is more elastic than overtime and, from the point of view of fatigue, preferable for the worker.

### Federal Housing Administration in the United States

Reference has been made in previous issues of the LABOUR GAZETTE (September, 1934, page 826, and November, 1934, page 989) to the purpose of the National Housing Act of the United States, 1934, and its program. After a year's activity the results of the Act are summarized in the first report of the Federal Housing Administration, as follows: Number of financial institutions now making loans of this type and operating on this plan, 3,997, representing 71 per cent of the total commercial banking resources of the country; amount of loans insured, \$30,450,583; loans reported during month of December at rate of \$398,000 per day; number of loans insured, 72,658; average amount of loan, \$419; average duration of loans, 28 months; number of chairmen appointed for campaign for repair and modernization, 4,931; number of communities organized, 3,822; number of house-to-house canvass calls made, 3,070,274; number of canvasses completed, 257; number of daily newspapers carrying better housing sections, 1,071; number of lines of newspaper advertising developed as a result of the better-housing campaign, 19,770,073; estimated total modernization and repair work developed, \$210,833,974; estimated weekly average of repair and modernization work developed during the month of December, \$17,760,000; estimated employment being currently finished due to Federal Housing Administration modernization and repair, 750,000; expenditures of Federal Housing Administration to date, \$1,739,770.36; estimated cost of furnishing employment, assuming all expenditures devoted to modernization program \$2.32 per person.

It was explained that at the time the National Housing Act was passed, there were, on the one hand, home owners who were allowing properties to fall into disrepair, and were failing to keep them up-to-date in convenience, livability, and attractiveness. On the other hand, stood unemployed workers in the building trades, lumbering, brickmaking, transportation, and allied occupations; plants were idle or running only part time in virtually all of the heavy industries. The normal channels of credit needed reopening to assist in bringing about a revival of repair work and new building after several years of lowered activity.

Indicating the problem of home financing, the report stated: "Many financial institutions, responsible for the safe investment of funds of their depositors, accumulating in increasing amounts, were receptive to a plan providing productive outlet for such funds. Other institutions with good home mortgages in their portfolios were temporarily out of the mortgage market because the traditional home mortgage is not a readily liquid asset. A large proportion of the institutions, representing millions of small savings depositors, were not able because of law or tradition, or both, to make mortgage loans of more than 50 or 60 per cent of the appraised value, whereas the most urgent demand is for first mortgages from 60 to 80 per cent of the appraised value of the property.

"Representatives of all groups concerned—the general public, business, labour, and finance—joined with the Government in devising a program for releasing credit and establishing the home financing of the country on a sounder basis. They proposed to participate in a country-wide movement for the improvement of housing standards and conditions.

"Following the passage of the National Housing Act, and as a result of the activities of the Federal Housing Administration, a national-better-housing movement has been inaugurated and is in full swing."

**International  
Labour Con-  
ference at  
Santiago**

The Governing Body of the International Labour Office in a special session at Geneva accepted an invitation given by Mr. Garcia Oldini, government delegate of

Chile, who proposed that a regional international labour conference should be held at Santiago de Chile, and that all the States of America should participate in it.

Accordingly the Director of the International Labour Office was authorized to invite, in agreement with the Chilean Government, all the States of America, Members of the Organization to take part in the proposed regional Conference. They would be asked to send tripartite delegations composed of two Government delegates, one employers' delegate and one workers' delegate, together with the necessary technical advisers.

This Conference at Santiago de Chile which will open on December 30, 1935, will have the following questions on its agenda:

(a) Examination of the situation of existing International Labour Conventions as concerns ratification and application with special reference to Conventions and Recommendations dealing with social insurance and Conventions and Recommendations dealing with the conditions of work of women and children;

(b) Examination of questions which might form the subject of future discussions at the International Labour Conference.

There were 5,480 accidents reported to the Workmen's Compensation Board during the month of July, this being the largest number during any month this year, and compares with 4,325 during June, and 5,489 during July a year ago.

The fatal accidents numbered 29, as compared with 23 in June, and 27 in July of 1934. The total benefits awarded amounted to \$420,427.47, of which \$340,768.07 was for compensation and \$79,659.40 for medical aid.

Mr. P. M. Draper, secretary-treasurer of the Trades and Labour Congress of Canada has been chosen president of the Congress by the Executive Council, succeeding Mr. Tom Moore, who retired on his appointment as a member of the Unemployment Insurance Commission of Canada. Mr. Draper will continue to act in the position of president and secretary-treasurer until the election of officers takes place at the Halifax convention which convenes September 16, 1935.

The Board of Directors of the Hollinger Consolidated Gold Mines Limited have decided to offer to all employees of the Hollinger mine a group life insurance policy and also the opportunity of joining in the establishment of a savings fund plan for the benefit of employees.

The first part of the plan involves a group life insurance policy which will be paid for entirely by the mine. The second part of the plan is for the purpose of assisting employees to build up a fund from which they will receive benefits when they leave the company. Employees joining this savings fund plan will make a contribution from each pay which will accumulate at interest. The company will supplement these contributions by an additional 20 per cent. An employee leaving before completing five years' service will receive a refund of his own contributions and the contributions made by the mine on his behalf together with interest in excess of three per cent per year.

Each employee contributing to the savings fund plan will receive in addition a group life insurance policy of \$250, the cost of which will be paid by the mine. In the event of death, at any time, the beneficiary of an employee, contributing to the savings fund plan, will receive the full amount of life insurance then in force together with the employee's contributions with interest and the mine's contributions to the fund with interest.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**F**IVE applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

(1) From certain employees of the corporation of the city of Winnipeg being linemen, cablemen, linemen's helpers, troublemen and groundmen, members of the Civic Linemen's Association. These men, thirty-five in number, are employed in connection with the Hydro Electric, Police, Fire Alarm and Street Lighting Departments of Winnipeg. They request certain changes in working conditions, including full compensation in case of accident, the Civic administration to pay one-third of the wages in addition to the two-thirds now paid by the Provincial Compensation Board; payment of a weekly wage to include holidays, instead of payment on an hourly basis with no payment for holidays as at present; and that, in connection with the 40-hour week which they are now working, the 40 hours shall be in the first five days of the week, after which time and one-half shall be paid. The men also desire a signed agreement. A representative of the Department of Labour interviewed the parties concerned in Winnipeg and it was arranged that the employees' complaints would be referred to the legislative committee of the City Council for consideration at an early date, the Board application to be held in abeyance in the meantime.

(2) From employees of the Sandwich, Windsor and Amherstburg Railway Company being members of Division No. 616 (Windsor) of the Amalgamated Association of Street and Electric Railway Employees of America. Approximately 182 persons are stated to be affected by the dispute. Two points are submitted in the application for determination, first, whether or not 171 union men should be compelled to work with 11 non-union men, and, second, if the Board of Management has the right to refuse a request to meet the accredited representatives of the men as provided in an agreement between the company and the union. The members of the union had gone on strike on July 13 for a period of twenty-four hours when their demand that the 11 employees should be required to join the union was refused; it was also alleged that the request of the employees' committee for a conference between the railway commission and the union and non-union men had been denied. The proposal of the City Council

that the men return to work and submit the dispute to arbitration was adopted by the men, who thereupon applied to the Department of Labour for a Board of Conciliation and Investigation. Upon receipt of the application a departmental representative was instructed to visit Windsor and confer with the interested parties.

(3) From seventy-five employees in the Gas Production and Distribution Service of the Winnipeg Electric Company, being members of the Gas Workers Unit, One Big Union. The cause of the dispute was stated to be the dismissal of three employees, who, according to the claims of the applicants, were senior to others in the service of the company and should therefore be given preference of employment. An officer of the Department of Labour conferred with the parties concerned in Winnipeg, and as a result of his mediation a basis of settlement was reached whereby preference of re-employment will be given to the three men involved as soon as the gas rehabilitation service is resumed, or, if this service is not commenced within a short period, when a vacancy occurs in the Gas Distribution Department, provided the men are competent to fill the vacant positions. The question of their efficiency is to be determined by the company. Procedure under the Industrial Disputes Investigation Act will accordingly be unnecessary.

(4) From certain employees of the London and Port Stanley Railway being clerks, shopmen, sectionmen, agents, despatchers, motor-men, conductors, brakemen, baggagemen, etc., members of the Canadian Brotherhood of Railway Employees. The dispute covered by the application relates to the employees' request for improved wage rates, an agreement having been already reached between the London and Port Stanley Railway Commission and the employees regarding working conditions. The Railway Commissioners claimed, however, that in making application for a Conciliation Board the employees violated an understanding reached with the Commission in regard to further negotiations concerning wage rates, and as a consequence the Commission instructed the manager of the railway not to sign or put into effect the agreement regarding working conditions. After the application was received in the Department of Labour a departmental officer visited London in connection with this dispute, and, as a result of a conference which he arranged between the parties concerned, the Commission agreed that at its next meeting a motion would be passed instructing the

manager to sign the agreement regarding working conditions to take effect as from August 1, 1935. The Commission further agreed that the question of wages would be open for further negotiations and that these negotiations would start immediately.

(5) From certain employees of the Winnipeg Electric Company, Manitoba Power Company, Limited, Northwestern Power Company, Limited, and Winnipeg, Selkirk and Lake Winnipeg Railway Company. Ninety-six employees, members of the Association of Sub-Station and Hydro Plant Employees, are stated to be directly affected by the dispute, which relates to the men's request for increased wages and certain changes in working conditions. A representative of the Department has been instructed to confer with the parties concerned in Winnipeg regarding this application.

A Board of Conciliation and Investigation was established by the Minister of Labour on July 16 to deal with a dispute between the Canadian National Telegraphs and certain of its employees throughout Canada being repeater attendants, radio attendants, manager-operators and operators, members of Canadian National System Division No. 43, Commercial Telegraphers' Union of North America. The membership of the Board is as follows: Mr. L. B. Spencer, K.C., Welland, Ontario, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members, Messrs. Geoffrey S. O'Brian and H. P. Green, both of Toronto, nominated by the employer and employees respectively. The application in this matter was received from the employees on May 27 (LABOUR GAZETTE, June, 1935, page 512).

The personnel of the Board of Conciliation and Investigation established on July 12 to deal with a dispute between various metal mines in the Bridge River District in British Columbia and certain of their employees, being underground and surface workers (LABOUR GAZETTE, July, 1935, page 607) was completed on July 25 by the appointment of His Honour, Judge J. C. McIntosh of Victoria, B.C.,

as Chairman of the Board, the appointment being made by the Minister of Labour in the absence of a joint recommendation from the other Board members, Messrs. T. W. Bingay and W. A. Pritchard, both of Vancouver, B.C., nominees of the companies and employees respectively.

It was reported in the July issue of the LABOUR GAZETTE, page 607, that the findings of the Board of Conciliation and Investigation which dealt with a wages dispute between the Western Stevedore Company, Limited, and the Canadian National Railways, on the one hand, and certain of their employees at Fort William and Port Arthur, on the other hand, being truckers, stowers, loaders, sealers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, had been rejected by the employing companies, and that subsequent mediation by an officer of the Department of Labour had failed to solve the issue. While the result of a secret ballot taken about July 21 amongst the employees showed 98 per cent in favour of a strike, the employees were not called out, arrangements having been made by the Honourable W. A. Gordon, Minister of Labour, and the Honourable Dr. R. J. Manion, Minister of Railways and Canals, to meet the committee representing the employees in Ottawa on July 31. These Ministers also conferred with representatives of the employing companies, and arranged a joint conference between the representatives of the employees and employers which was held later in the same day. While an agreement was not reached at this conference, certain concession were offered by the employers which are now receiving consideration by the men. Owing to a misunderstanding a cessation of work for one-half hour by the employees of the Canadian National Railways at Port Arthur occurred on July 25. These employees had been informed erroneously that the employees of the Western Stevedore Company at Fort William had gone on strike. Upon learning that this was not the case, they immediately returned to work.

## Prosecution under Section 61 of the Industrial Disputes Investigation Act

On June 17, while the ss. *Southolm*, owned and operated by Frank Waterhouse and Company of Canada, Limited, was lying at the Empire Canal wharf, Esquimalt, British Columbia, ten of the crew refused duty in sympathy with the longshoremen who were on strike in Vancouver. Charges were laid by the Master of the ship, Captain R. B. Bennett, against the crew under Section 288 (G) of the Canada Shipping Act, and against Patrick Driscoll, organizer of the Waterfront Workers'

Union, under Section 61 of the Industrial Disputes Investigation Act for inciting the crew of the vessel to go on strike. The case against the ten sailors under the Canada Shipping Act was dismissed by the magistrate. On July 5 Patrick Driscoll appeared before Stipendiary Magistrate George Jay in the Provincial Police Court, Victoria, British Columbia. He was found guilty and was sentenced to a fine of \$500 or three months in prison. Section 61 of the Industrial Disputes Investigation Act,

under which this sentence was passed, reads as follows:—

"61. Any person who incites, encourages or aids in any manner any employer to declare or continue a lockout, or any employee to go or continue on strike, contrary to the provisions of this Act, shall be guilty of an offence

and liable to a fine of not less than fifty dollars, nor more than one thousand dollars. 1907, c. 20, s. 60."

The Act applies to mines and industries connected with public utilities, including railways, steamships, telegraph and telephone lines, etc.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM APRIL 1, 1935, TO JULY 31, 1935

**C**ONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act, which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The following statement covers the more important conciliation matters dealt with during the period from April 1, 1935, to July 31, 1935. (An article covering the period December 1, 1934, to March 31, 1935, appeared in the *LABOUR GAZETTE*, April, 1935, page 317.)

*Coal Miners, Drumheller, Alta.*—On March 5, 1935, negotiations were opened between representatives of the coal miners employed in the Drumheller field, members of the United Mine Workers of America, District 18, and representatives of the mine operators relating to a new wage agreement which involved, on the part of the miners, an increased wage

scale. This conference was adjourned until March 20 and, as no basis of agreement could be found at this latter conference, it was unanimously decided that the services of the western representative of the Federal Department of Labour be requested. Following this request the departmental officer proceeded to Drumheller and upon his arrival there held several joint conferences with the interested parties but was unsuccessful in bringing the disputants into agreement. Finally he proposed in writing a compromise settlement which, in the main, was acceptable to the miners but was refused by the operators. As a direct settlement could not be made the miners applied for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. It is stated that 1,350 miners are directly affected.

*Booming Ground Employees, Vancouver, B.C.*—Approximately 100 men employed on the booming grounds, Port of Vancouver, members of the Vancouver Export Log Workers' Association, went on strike on April 5, 1935, demanding a signed agreement with the British Columbia Log Exporters' Association, which would embody increased wages and improved working conditions, the negotiations which had taken place having proved unsuccessful. Following this action, longshoremen, members of the Vancouver, New Westminster and District Waterfront Workers' Association, in sympathy with the strikers, refused to load logs on certain ships, thereby tying up operations. A conciliation officer of the department, who at that time was in Alberta, was instructed to proceed to Vancouver to offer his assistance to the interested parties. Following his arrival conferences were held and a signed agreement was subsequently brought about. Work was resumed on April 25.

*Longshoremen, Montreal, P.Q.*—Longshoremen in the Port of Montreal, members of the Association of Syndicated Longshoremen, ceased work on the afternoon of May 1, 1935, demanding improvements in their working conditions, particularly in respect to the weight of sling loads. There are approximately 3,500 members of this association, of whom it

is said 2,000 were actually employed at the time of the cessation of work. The strike immediately tied up operations on a large number of ships in port at that time. The Montreal representative of the Department of Labour, in the capacity of mediator, at once interviewed representatives of the strikers as well as of the Shipping Federation, and arranged joint conferences. On the morning of May 2 an agreement was reached with representatives of the longshoremen with the understanding that the men would return to work the following afternoon. It developed, however, that this agreement did not meet with the approval of the membership. Additional demands were made and the strike continued. Negotiations followed and on the morning of May 4 the Harbour Commissioners of Montreal intervened, calling a conference of officials of the Shipping Federation and of the Association of Syndicated Longshoremen. A settlement of the issue was brought about, the men securing their full demands and returning to work the same afternoon.

*Coal Miners, Edmonton, Alta.*—On May 7, 1935, an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour from officials of District No. 18, United Mine Workers of America, on behalf of coal miners, members of that organization. The application, which covered miners employed by twelve coal mining companies operating in the Edmonton field, stated that the employers had refused to grant their demand for an increase in wages of 25 per cent and to adjust certain inequalities. It was stated that 700 men were directly affected. Representatives of the mine operators and officials of the union intimated that the services of the western representative of the Federal Department of Labour might be helpful in finding a solution of the dispute and this officer was instructed accordingly. On May 14 the departmental officer conferred with the interested parties in Calgary, and it was verbally agreed that no action would be taken toward the establishment of a board at that particular time. The latter part of July a further understanding was reached that the matter would be allowed to remain in abeyance pending the report of a Board of Conciliation and Investigation dealing with a similar dispute in the Drumheller field, it being anticipated that such report would be forthcoming shortly.

*Longshoremen, Vancouver and New Westminster, B.C.*—Early in 1935 members of the Vancouver, New Westminster and District Waterfront Workers' Association gave notice to the Shipping Federation at the Port of Vancouver that they desired to reopen their

agreement, requesting wage increases and changed conditions of employment. During the latter part of April and in May correspondence was exchanged between representatives of both groups for the purpose of establishing a basis of negotiations. It became evident to this department that the dispute might lead to a strike being called without proper negotiations having taken place, and the western representative brought to the attention of both parties the requirements of the Industrial Disputes Investigation Act in this respect, at the same time stating that the conciliation service of the Department of Labour was available upon request. Friction developed over several matters, including the notification on May 23 of the Waterfront Workers' Association that after May 26 despatching of gangs of longshoremen would be done by the union, notwithstanding the fact that the agreement in effect provided that such despatching be done by the Shipping Federation. As a result, in the latter part of May, the Shipping Federation made application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with the various matters in dispute. A board was established promptly and both parties notified accordingly. Shortly thereafter a telegram was received from the Shipping Federation withdrawing their application. The longshoremen had refused to load certain cargo which had been received from Powell River, where a longshoremen's dispute was in progress, and the Shipping Federation thereupon notified the Waterfront Workers' Association that the agreement was cancelled. Following this the longshoremen ceased work on other ships as well, and a sympathetic strike of various classes of water transport workers occurred. The request of the Shipping Federation was not granted, and both parties were requested by telegram to nominate persons to act as board members, and were further urged to permit the dispute to be dealt with through board procedure. No reply was received from the employees' association, they having previously protested against a board being established. The Shipping Federation advised that they were not agreeable to board procedure inasmuch as they had entered into an agreement with another union recently organized. In recent weeks a conciliation officer of the Federal Department of Labour has on a number of occasions conferred with the interested parties and also brought about joint conferences with the object of finding a basis of settlement of the whole matter, but unfortunately these efforts have been without success. It was stated that 927 workers were directly affected by this dispute.

*Track Department Employees, Winnipeg, Man.*—On April 27, 1935, the Department of Labour received an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act from employees of the Track Department, Winnipeg Electric Company, members of Winnipeg Electric Trackmen's Unit, One Big Union, to deal with a dispute which had arisen between this group of employees and the company officials. It was alleged that one of their members had been laid off in violation of the seniority clause of the existing agreement, and that direct negotiations had failed to settle the issue. The applicants were advised by the Department of Labour that inasmuch as negotiations were to shortly take place between representatives of various classes of employees and officials of the Winnipeg Electric Company on matters respecting wages and working conditions this particular question should also be dealt with at that time; further that if it should be necessary to establish a board to deal with these other matters then this particular case could be referred to the same Board for adjustment. Under date of May 23, the applicants advised the department that all matters in dispute had been adjusted, and requested that the board application be withdrawn.

*Textile Workers, Valleyfield, P.Q.*—On May 13, 1935, a delegation representing employees in the plant of the Dominion Textile Company at Valleyfield, P.Q., interviewed in Montreal, the representative of the Federal Department of Labour in that city, complaining of low wages and certain conditions of employment. They also alleged discrimination against a number of employees on account of their affiliation with the National Catholic Syndicate, and stated that there was danger of a strike occurring. Approximately 1,700 employees were involved. The departmental representative, in the capacity of conciliator, took this matter up with the managing director of the company and arranged for a conference between the delegation and officials of the company, which took place that afternoon. At the meetings at which the conciliator was present, all points raised by the delegation were discussed in a very frank and friendly manner and the misunderstandings which had heretofore existed were apparently cleared up. The Department of Labour has not received any further reports on the subject.

*Steamship Clerks, Checkers, Stowers, Loaders, etc., Fort William and Port Arthur, Ont.*—In the December, 1934, issue of the LABOUR GAZETTE reference was made to a dispute involving truckers, stowers, loaders, sealers, checkers, assistant foremen and clerks, mem-

bers of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, employed by the Western Stevedore Company, Limited, and the Canadian National Railways at Fort William and Port Arthur, Ontario, and to the establishment, in November, of a Board of Conciliation and Investigation to deal with the matter. The report (majority) of this Board was received in the department on April 27, 1935, and, while it did not meet the requests of the employees in respect to wages, substantial increases were recommended. The report was accepted by the employees' representatives but the employing companies refused to make the recommendations effective. A wage deduction of 20 per cent had been reduced to 10 per cent by May 1, as for certain classes of railway employees. On or about June 19, the employees, by a show of hands, authorized the taking of a strike ballot. Following this a conciliation officer of the Department of Labour visited the Head of the Lakes and Winnipeg and conferred with officials of the employing companies and with committees of the employees with the object of finding, if possible, an acceptable basis of settlement. The employers, however, would not agree to make effective the board's recommendations in respect to wages, nor would they agree to any further concessions in that direction. A strike ballot was taken which resulted in an overwhelming majority for strike action. Following this vote the vice-president of the union brought the matter to the attention of the Prime Minister by telegraph and requested that a committee of the employees be given an opportunity to discuss the situation with him. In the absence of the Prime Minister, the Honourable W. A. Gordon, Minister of Labour, and the Honourable Dr. R. J. Manion, Minister of Railways and Canals, conferred, in Ottawa, with a committee of the men on July 31, and on the same day also held a conference with representatives of the Canadian National Railways, the Canadian Pacific Railway Company and the Western Stevedore Company, Limited. As a result of these discussions a joint conference between these groups was arranged for the same afternoon. It is understood that certain concessions in respect to wages were offered by the employers and, while a definite settlement was not reached at the time, there was reason to believe that an adjustment of the difficulty might be anticipated.

*Railway Shopmen, Winnipeg, Man.*—In January, 1935, an application was received in the Department of Labour from shopmen employed in the Fort Rouge Shops, Canadian National Railways, Winnipeg, Manitoba, members

of the Fort Rouge Railroad Workers' Unit, One Big Union, for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute arising out of alleged discrimination against two of their members. Following receipt of this application interviews took place between officials of the Canadian National Railways and officers of the Department of Labour, and correspondence was carried on over a period of several months. In June word was received in the department that this dispute had been satisfactorily disposed of, and the board application was withdrawn.

*Metal Miners, Bridge River District, B.C.*—On May 5, 1935, and following days, approximately 800 metal miners employed at five mines in the Bridge River area, B.C., went on strike, demanding increased wages. The matter was investigated by officials of the provincial Government, who urged the men to resume work and refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. On the suggestion of the provincial Minister of Labour and Mines, the employers offered a substantial increase in wage rates and on May 22nd approximately 700 miners employed at the Pioneer, Bralorne and Bradian mines returned to work pending the establishment and report of a Board of Conciliation and Investigation. A conciliation officer of the Federal Department of Labour assisted in this matter and urged the remaining strikers to follow the same course. Early in June work was resumed in the Wayside mine, and on June 25 the Department of Labour received applications for the establishment of Boards of Conciliation and Investigation on behalf of the miners employed by the Congress Gold Mines, Limited; the Wayside Consolidated Gold Mines, Limited; the Bralorne Mines, Limited; the Bradian Mines, Limited; and the Pioneer Mines, Limited. One board was promptly established to deal with the several disputes. The employees of the Congress Mines, a very few in number, were still on strike at the time the application for a board was made but resumed work before the board was fully constituted.

*Street Railway Employees, Winnipeg, Man.*—In the latter part of June, 1935, officials of the Street Railway Employees' Unit, One Big Union, Winnipeg, Manitoba, discussed with a conciliation officer of the Department of Labour, then in Winnipeg, the matter of the dismissal by the Winnipeg Electric Company of two of their members, one being a motorman, the other a busman, and requested that these cases be taken up with the em-

ploying company. Following this discussion the conciliator interviewed the vice-president in charge of operations, Winnipeg Electric Company, and found that the company would not agree to reinstate these men in their former positions. Another position had been accepted by one of the men, but in regard to the other man there was no opening available although it was intimated that in due course it might be possible to find a position which he would be qualified to fill. The vice-president further stated that employment as ticket collector would be found for this man provided the union would agree to grant him seniority in this capacity. At the end of July the dispute was still receiving departmental attention.

*Structural Steel Workers, Winnipeg, Man.*—Approximately 40 steel workers, members of the Structural Steel and Ornamental Iron Workers' Unit, One Big Union, employed by the Dominion Bridge Company, Winnipeg, Manitoba, ceased work on June 20, 1935, demanding an increase in the hourly wage rate from 75 cents to 90 cents. A conciliator of the federal Department of Labour, with the approval of the business agent of the union, visited Winnipeg and held conferences with the interested parties over a period of several days, which resulted in a settlement being effected on June 26 on the basis of an hourly rate of 80 cents. The steel workers resumed work the following morning.

*Cigar Makers, Montreal, P.Q.*—Approximately 150 cigar makers, members of Local No. 58, Cigar Makers' International Union of America, Montreal, P.Q., employed by Benson & Hedges, Limited, ceased work on July 3, 1935, demanding increases in piece work rates. Upon a request for mediation being made by the employees' representative to the Honourable Mr. Gordon, Minister of Labour, the minister instructed the departmental representative in Montreal to urge the employers to confer with a committee of the strikers and the international representative of the union for the purpose of finding a solution of the dispute. The employers agreed to meet this committee and the conferences which followed resulted in an understanding being reached which was acceptable to both parties. The strikers resumed work on July 10.

*Pilchard Fishermen, West Coast of Vancouver Island, B.C.*—Early in June, 1935, a dispute developed between Federal Union No. 44, United Fishermen of British Columbia, and the Meal, Oil and Salt Fish Section of the Canadian Manufacturers' Association in regard to the price per ton to be paid for pilchard fish during the 1935 season. On

July 2 a conference of the interested parties was held in the offices of the federal Department of Labour, at Vancouver, and it was ascertained that the fishermen were insisting upon a rate of \$2.50 per ton. The operators had offered \$2.25 per ton. The departmental mediator suggested that the matter be decided by arbitration but this was not acceptable to the fishermen, and it was finally agreed that a vote of the men would be taken in regard to the acceptance of the offer of \$2.25 per ton. At a meeting of the fishermen held on July 6, the offer of the operators was refused. A joint conference of representatives of the union and the operators was held on July 8 but neither side would recede from its position. On July 9 the mediator held separate conferences with the executive boards of both parties to the dispute and finally submitted a compromise proposal on the basis of \$2.35 per ton. This was accepted by the fishermen at a meeting held on the 10th and was also agreed to by the operators. The settlement was covered by signed agreement, and the fishermen and operators proceeded to the fishing grounds on the afternoon of July 11.

*Operating Engineers, Hamilton, Ont.*—On July 3, 1935, an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour from locomotive, hoisting and stationary engineers and firemen, members of Local Union No. 700, International Brotherhood of Operating Engineers, employed by the Hamilton By-Product Coke Ovens, Limited, Hamilton, to deal with a dispute involving the demand of the men for an increase in wages of 20 per cent, shorter working hours and certain other changes in conditions of employment. The application stated that 44 men were directly affected by this dispute and 55 indirectly affected. A conciliation officer of the Department of Labour visited Hamilton on July 10 and held separate and joint conferences with the parties directly concerned. Finally an understanding was reached which appeared to be acceptable to the employees' representatives and it was agreed that the board application would be withdrawn. Some misunderstanding arose later, however, over the wording of the agreement to be signed, and at the end of July the matter was still receiving departmental consideration.

*Street Railway Employees, Edmonton, Alta.*—In the latter part of May, 1935, the Mayor of the City of Edmonton requested the services of a conciliation officer of the federal Department of Labour to deal with a dispute

relating to a division of night and day runs between senior and junior men in the service of the Edmonton Street Railway (municipally owned). A conciliator visited Edmonton in July and discussed the situation with the interested parties. It was ascertained that the dispute related to the principle of seniority in the choice of runs which for years past has governed, and involved two groups of employees in the same service but members of rival unions. In the circumstances the parties were advised that this question was not one for departmental mediation. It is understood that approximately 130 workers were directly involved in this dispute.

*Street Railway Employees, Windsor, Ont.*—On July 19, 1935, a request was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act from employees of the Sandwich, Windsor and Amherstburg Railway Company, being members of Division No. 616 (Windsor), Amalgamated Association of Street and Electric Railway Employees of America, a dispute having arisen over the refusal of certain of the employees of the railway company to join the union and the refusal of the company to co-operate with the association to compel them to do so. A conciliator of the department was immediately assigned to the case and conferences with the interested parties were held in Windsor on July 25 and 26. At the end of the month the matter was still receiving departmental attention.

*Electric Railway Employees, London, Ont.*—On July 23, 1935, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute involving increased wages and improved working conditions which had arisen between the London and Port Stanley Railway Commission and their clerical employees, shopmen, sectionmen, agents, despatchers, motormen, conductors, brakemen, baggagemen, etc., members of Local No. 262, Canadian Brotherhood of Railway Employees. A conciliation officer of the department visited London a few days later and conferred with representatives of the employees and with the London and Port Stanley Railway Commission. At the end of the month it appeared that a settlement of the issue could be reached without board procedure.

*Linemen, Cablemen, etc., Winnipeg, Man.*—On July 19, 1935, there was filed in the Department of Labour, on behalf of employees of the City of Winnipeg, being linemen, cable-

men, linemen's helpers, troublemen and groundmen, members of Civic Linemen's Association, Winnipeg, Manitoba, an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute which had arisen over the refusal of the civic authorities to discuss a new agreement respecting wages, hours, and other conditions of employment. The application stated that 35 employees were directly affected by the dispute, and 8 indirectly. Following receipt of this application an officer of the Department of Labour was instructed to proceed to Winnipeg and interview the parties concerned with the object of having the matter settled by direct negotiation and without recourse to board procedure. On July 28 and following days this officer conferred with members of the City Council and with representatives of the employees, and at the end of the month there was some indication that a direct settlement of the matter would be reached within a short period.

*Gas Production Department Employees, Winnipeg, Man.*—An application was received

in the Department of Labour on July 20, 1935, for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute which had arisen between the Winnipeg Electric Company and certain of its employees in the gas production and distribution service of the company, being members of the Gas Workers' Unit, One Big Union. The employees alleged that three members of the union had been dismissed although they were senior to others still in the employ of the company. The company contended that on account of curtailment of work the services of the men in question were no longer required, and they would not agree with the committee of the One Big Union that they were senior to other employees. The application stated that 75 employees were directly concerned in the matter. A conciliation officer of the Department of Labour was assigned to the case and on July 29 and following days interviewed officials of the employing company and representatives of the men. At the end of the month some progress had been made toward a direct settlement of the dispute.

### The I. L. O. Year Book, 1934

The *I. L. O. Year Book 1934*, just published, is a compendium of facts and figures relating to economic, industrial and social life in 1934. In two respects changes have been introduced in the usual arrangement of this publication, which is now issued for the fifth time. In the first place, it has no longer been found possible to keep the material for this publication strictly within the limits of a calendar year. The present edition is therefore entitled *The I. L. O. Year Book 1934-35*. Secondly, the statistical tables which have always accompanied the *Year Book*, and which in the issue for 1933 were grouped in a special appendix, have year by year increased in number and detail. This was so marked in the case of the present issue that it was decided to publish them in the form of a separate volume. Volume II of the *I. L. O. Year Book 1934-35* is entitled "Labour Statistics" and includes, in addition to a special introduction, statistical tables grouped under six principal heads, and detailed notes on the sources of the statistics.

The *Year Book* proper, Volume I, includes an account of the principal events of the year in all branches of social policy. To mention only the most salient, there is first the unbroken series of measures taken nearly everywhere to diminish unemployment and over-

come the economic depression: direct relief for the unemployed, comprehensive public works policies, spreading of available employment by a reduction of hours of work. Next, in the field of social insurance, there have been, in addition to proposals for new legislation, a number of measures to consolidate existing systems and adapt them to present conditions. Finally, in several countries new ideas have sprung up for the organization of modern society, and attempts are being made to establish the economic, the social, and even the political structure of the State on a new foundation.

W. F. Dunn, K.C., has been appointed chairman of the Workmen's Compensation Board of Saskatchewan, it was announced recently. He replaces N. R. Craig, K.C., chairman of the board for some four years. Mr. Dunn was formerly counsel to the Saskatchewan Debt Adjustment Board and has been an acting member of the Compensation Board.

Two other members of the board R. S. Banbury and Alfred Higgin, have been retired from office. They have been replaced by Ralph Heseltine, former alderman of Regina, and A. W. Heise, Saskatoon, building contractor and member of the public school board.

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1935

THE following table shows the number of disputes, workers involved and time loss for July, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*July, 1935.....	25	7,355	67,888
*June, 1935.....	14	4,997	57,081
July, 1934.....	32	11,463	71,763

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of strikes and lockouts during July showed increases over the figures for June owing to the occurrence of a number of disputes involving small numbers of workers. The figures for numbers of employees involved and time loss incurred, however, were greater as a result of three disputes which caused nearly ninety per cent of the time loss for the month and involved over one-half of the workers affected by disputes. These strikes were those of longshoremen at Vancouver, B.C., various classes of water transport workers at Vancouver and other British Columbia ports (sympathetic), and that of loggers in the Nipigon district of northern Ontario. These three strikes began in June and caused most of the time loss for that month also. A strike of coal miners in two collieries at New Waterford, N.S., involved nearly two thousand men for a few days in July. In July, 1934, a strike of men's clothing factory workers in Montreal was the most important dispute but there were several causing considerable time loss as well as many involving small numbers of workers.

Ten disputes, involving 4,324 workers, were carried over from June and fifteen disputes commenced during July. Of these twenty-five disputes, sixteen were terminated during the

month, two resulting in favour of the workers involved, seven in favour of the employers concerned, compromise settlements being reached in five cases, while the results of two were recorded as indefinite. At the end of July, therefore, there were nine disputes in progress recorded as strikes or lockouts, namely: compositors, Calgary, Alta.; compositors, Winnipeg, Man.; furniture factory workers, Toronto, Ont.; longshoremen, Powell River, B.C.; longshoremen, Vancouver, B.C.; water transport workers, Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.; dairy drivers, Hamilton, Ont.; quarry and limekiln workers, Guelph, Ont.; and women's clothing factory workers, Montreal, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to three such disputes, namely: photo engravers, Toronto, and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer. The dispute involving hat factory workers employed by one firm in Montreal, P.Q., commencing March 5, 1935, and carried in the above list since April, is recorded as lapsed by the end of June and has accordingly been removed from the list.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A dispute involving pilchard fishermen on the west coast of Vancouver Island in British Columbia delayed the commencement of operations for ten days after the commencement of the season on July 1. The dispute was settled through conciliation of the representative of the Department as outlined elsewhere in this issue.

A dispute as to the employment of local union men in the decoration of a church in Hamilton, Ont., led to picketing for a short time on July 11, it being finally arranged that some of the work would be given to local union members.

A strike of tie cutters at Canal Flats, B.C., for a short time about July 12 has been reported but particulars have not been received.

It appears that an increase in piece rates was secured with improvements in camp conditions.

A dispute involving printing compositors employed in one newspaper establishment of Calgary, Alta., has been reported as a lockout. On the expiration of the agreement between the management and the International Typographical Union on May 15, 1935, a dispute as to a provision for the forty hour week in accordance with a new rule of the union arose and a number of the employees formed an independent union, which reached an agreement with the management for the continuation of the same wages and working conditions, hours of labour being forty-five per week. As employment under this agreement was restricted to members of this union, it is reported that twenty employees who refused to join it were notified on July 8 that they must become parties to the new agreement if they wished to continue in their employment. Reports from the parties to the dispute have not yet been secured.

A strike of clay workers early in July at Crow's Nest, B.C., has been reported but particulars have not been received. It was stated that after two or three days a settlement was reached, wages being increased three cents per hour and hours of work reduced from ten per day to nine.

A dispute involving six employees of a waste material dealer at Toronto, Ont., about the middle of the month, has been reported in the press but particulars have not been received. It is stated that the strikers demanded an increase in wages from 13 cents per hour to 25 cents, a nine hour day and union recognition.

A cessation of work for one-half hour by stevedores at Port Arthur, Ont., occurred on July 25, owing to a misunderstanding. As related elsewhere in this issue, a dispute as to wages had been referred to a Board under the Industrial Disputes Investigation Act, and while negotiations were in progress as to accepting the award of the Board the men at Port Arthur were informed that the men at Fort William had gone on strike. Learning that this was not so, they returned to work.

A cessation of work by certain drivers in a coal mine at Caledonia, N.S., for two night shifts, July 25 and July 26, has been reported in the press, this preventing the operation of the mine. Particulars as to the dispute have not been received but it was reported that there was a complaint as to the horses available.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

LOGGERS, NIPIGON DISTRICT, ONT.—Early in

July some of the workers involved in the strike, to secure wage increases and improved camp conditions, which commenced about June 19, began to resume work, and by July 12 there were reported to be only about one thousand still on strike. On July 18 an agreement was reached between representatives of the timber operators and the workers, and those still on strike returned to the camps. The settlement provided for the rate of \$3.25 per cord, previously in effect, for cutting and peeling logs for the balance of the season, higher rates to be paid for work in poor timber. The minimum monthly rate was raised from \$35.00 per month and board to \$40.00, with \$45.00 for teamsters. Provisions were also made as to sanitary conditions, prices of goods furnished in camps and for recognition of camp committees, freedom of choice as to union membership, right of union representatives to see men in camp but not to interfere during working hours, the check-off for union dues at each employee's request, and no discrimination for union activity. The agreement is outlined elsewhere in this issue. Three of the strikers were reported to have been arrested on charges of obstruction, etc., in connection with picketing. One was convicted of theft for taking employment tickets from two men, being fined \$50.00 and costs or three months in jail, and two were sentenced to one month in jail.

GOLD MINERS, BRIDGE RIVER, ETC. (CARIBOO DISTRICT), B.C.—The employees in one mine still involved in the strike, commencing May 5, resumed work about July 26, the dispute having been referred to a Board under the Industrial Disputes Investigation Act. The conciliation proceedings leading to this result are outlined elsewhere in this issue.

LEATHER GARMENT FACTORY WORKERS, TORONTO, ONT.—This dispute, commencing May 7, involving one employer, is recorded as lapsed. It is reported that the strikers were replaced some time ago.

LONGSHOREMEN, VANCOUVER, B.C.—Early in July the Shipping Federation had replaced about 700 of the men on strike since June 5, and by the middle of the month about one hundred of the strikers had returned to work so that work in the port was being handled with very little delay. Representatives of the strikers through the Mayor of Vancouver requested the employers to enter into negotiations but the latter refused as the union had repeatedly violated its agreement. A number of pickets have been arrested for assault of individual workers from time to time, and at the preliminary hearings for those arrested in connection with the riot on June 19, several were committed for trial.

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1935\*

Industry, occupation and locality	Number of workers involved	Time lost in working days	Remarks
<b>(a) Strikes and Lockouts in progress prior to July, 1935</b>			
LOGGING— Loggers, Nipigon District, Ont...	2,100	20,000	Commenced June 19, 1935; for increase in piece rates and improved camp conditions; terminated July 17, 1935; compromise.
MINING, ETC.— Gold miners, Bridge River, etc. (Cariboo District), B.C.....	10	200	Commenced May 5, 1935; for increase in wages; terminated July 25, 1935; indefinite.
MANUFACTURING— <i>Fur, Leather, Etc.</i> — Leather garment factory worker, Toronto, Ont.....	6	50	Commenced May 7, 1935; for recognition of union and changes in working conditions; lapsed during July, 1935; in favour of employer.
<i>Printing and Publishing</i> — Compositors, Calgary, Alta...	30	650	Commenced Jan. 10, 1935; against decrease in wages; unterminated.
Compositors, Winnipeg, Man...	50	1,300	Alleged lockout; April 7, 1935; re employment of members of one union only; unterminated.
<i>Other Wood Products</i> — Furniture factory workers, To- ronto, Ont.....	25	650	Commenced May 16, 1935; alleged violation of agreement; unterminated.
TRANSPORTATION— <i>Water</i> — Longshoremen, Powell River, B.C.....	65	1,000	Commenced May 17, 1935; for union recognition and union wage scale; unterminated.
Longshoremen, Vancouver, B.C.....	927	15,000	Commenced June 5, 1935; against cancellation of agreement; unterminated.
Coastal longshoremen, ships' crews, ship liners, boom log workers, etc., Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.....	1,100	20,000	Commenced June 15, 1935; in sympathy with longshoremen on strike at Vancouver from June 5; unterminated.
TRADE— Dairy drivers, Hamilton, Ont...	11	250	Commenced June 27, 1935; for "closed shop" union agreement; unterminated.
<b>(b) Strikes and Lockouts commencing during July, 1935</b>			
AGRICULTURE— Cherry pickers, Jordan, Ont....	15	15	Commenced July 10, 1935; for increased wages; terminated July 10, 1935; in favour of employer.
Cherry pickers, Collingwood, Ont.....	82	15	Commenced July 30, 1935; for increased piece rates; terminated July 30, 1935; in favour of employer.
MINING, ETC.— Quarry and limekiln workers, Guelph, Ont.....	13	156	Commenced July 17, 1935; for increased wages and union agreement; unterminated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1935—*Concluded*

Industry occupation and locality	Number of workers involved	Time loss in working days	Remarks
MINING, ETC.— <i>Concluded</i> Coal miners, New Waterford, N.S.....	1,950	6,100	Commenced July 23, 1935; for employment of members of one union only; terminated July 27, 1935; in favour of employer.
MANUFACTURING— <i>Vegetable Foods—</i> Canning factory workers, Tecumseh, Ont.....	230	460	Commenced July 11, 1935; for increased wages; terminated July 12, 1935; compromise.
Cigar factory workers, Mont- real, P.Q.....	150	900	Commenced July 3, 1935; for increase in wages; terminated July 9, 1935; compromise.
<i>Boots and Shoes—</i> Shoe factory workers (cutters), Kitchener, Ont.....	32	96	Commenced July 23, 1935; for increased wages and changes in conditions; terminated July 25, 1935; compromise.
<i>Textiles, Clothing, etc.—</i> Women's clothing factory workers (cloaks and suits), Montreal, P.Q.....	40	120	Commenced July 29, 1935; for union wages and working conditions; untermiated.
<i>Other Wood Products—</i> Box factory workers, New Westminster, B.C.....	34	136	Commenced July 10, 1935; for increased wages; terminated July 13, 1935; in favour of employer.
<i>Metal Products—</i> Steelfoundry workers, Selkirk, Man.....	36	18	Commenced July 16, 1935; for increased wages; recognition of union shop committee and changes in working conditions; terminated July 16, 1935; in favour of workers.
CONSTRUCTION— <i>Highway—</i> Truck drivers, Amherst- Springhill District, N.S.....	17	17	Commenced July 8, 1935; for increase in wages; terminated July 8, 1935; in favour of workers.
TRANSPORTATION— <i>Electric Railways—</i> Street railway employees, Windsor, Ont.....	182	182	Commenced July 13, 1935; for employment of union members only; terminated July 13, 1935; indefinite.
<i>Water—</i> Stevedores, Windsor, Ont.....	200	500	Commenced July 22, 1935; for increased wages; terminated July 25, 1935; compromise.
TRADE— Dairy employees, Sudbury, Ont.	5	50	Commenced July 2, 1935; against discharge of worker; terminated July 12, 1935; in favour of employer.
SERVICE— <i>Public Administration—</i> Teamsters and garbage collec- tors, Ottawa, Ont.....	45	23	Commenced July 15, 1935; against suspension of workers; terminated July 15, 1935; in favour of employer.

**COASTAL LONGSHOREMEN, SHIPS' CREWS, SHIP LINER, BOOM LOG WORKERS, ETC.—VANCOUVER, VICTORIA, NEW WESTMINSTER, CHEMAINUS, ETC., B.C.**—This dispute, in sympathy with the strike of longshoremen at Vancouver was untermated at the end of the month. At Victoria, on July 13, longshoremen refused to handle Vancouver cargoes and the employers entered into an agreement with a new union. One hundred men ceased work and picketed the docks. At New Westminster a number of pickets were arrested on charges of assault, obstruction, etc., several being fined or imprisoned.

**DAIRY DRIVERS, HAMILTON, ONT.**—A strike of several milk drivers, teamsters and chauffeurs employed by one company, on June 27, was reported too late for inclusion in the July issue of the *LABOUR GAZETTE*. The International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers had negotiated with the management for an agreement but the latter refused to agree to clauses providing for employment of union members only and restricting the right to discharge employees. The employer adjusted the wage scale to provide for \$21.00 per week plus three and one-half per cent in rates, as compared with the union scale of \$21.00 plus three per cent, and replaced the strikers. Negotiations were carried on from time to time during the month with the assistance of provincial conciliation officers but no settlement was reported. The employer is reported to have secured a court order that the strikers must not canvass on their former routes.

**CHERRY PICKERS, JORDAN, ONT.**—A number of the employees of one fruit grower ceased work on July 10 demanding an increase in piece rates. The employer replaced them next day, paying slightly higher rates. As the strikers interfered with the workers police were called and the strikers departed.

**CHERRY PICKERS, COLLINGWOOD, ONT.**—Employees of two fruit growers ceased work on July 30 demanding increases in piece rates. One employer increased the rate slightly and work was resumed. The other refused and most of the strikers are reported to have resumed work within a short time while the others, having been replaced, picketed the premises for the balance of the day.

**QUARRY AND LIME KILN WORKERS, GUELPH, ONT.**—A number of the employees of one firm ceased work on July 17, their demand for an agreement with the Mine Workers' Union of Canada having been refused. The management discussed the proposal for an increase in wages, from 35 cents per hour to 50 cents, and in piece rates from 20 cents per ton to 30

cents, with the employees and offered to increase hourly rates five cents per hour and piece rates five cents per ton pending further investigation. This was refused by the union members who then ceased work. The plant was then closed, twenty-two other employees being indirectly affected. At the end of July the dispute was untermated but early in August a settlement was reported.

**COAL MINERS, NEW WATERFORD, N.S.**—Employees in two collieries ceased work, on July 23 in one case and on July 25 in the other. They demanded that all employees should be members of the United Mine Workers of America, the union which had the agreement with the management. The latter refused to take any action and work was resumed in both mines on July 29.

**CANNING FACTORY WORKERS, TECUMSEH, ONT.**—A number of employees in one factory ceased work from July 11 to July 13, the remainder being indirectly involved. The strikers' demand for increases in wages of 10 cents per hour for men and five cents for boys had been refused. Work was resumed when an increase of  $7\frac{1}{2}$  cents per hour was offered, making minimum rates of 20 cents per hour for boys and 25 cents to 35 cents for men according to class of work. Wages for girls were increased  $2\frac{1}{2}$  cents per hour, the new rates being 20 cents to  $22\frac{1}{2}$  cents per hour. The settlement was brought about through conciliation of the provincial Department of Labour at the request of the municipal authorities.

**CIGAR MAKERS, MONTREAL, P.Q.**—Employees in one factory ceased work on July 3 when their request for an increase in wages was refused. The representative of the Department of Labour arranged a conference between the management and union representative and, a compromise being reached, work was resumed on July 10.

**SHOE FACTORY WORKERS, KITCHENER, ONT.**—Cutters in one factory ceased work on July 23, demanding an increase in wages. A settlement was arranged between the management and the factory council providing for a change in method of wage payment and for the avoidance of excessive overtime. Work was resumed on July 26.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), MONTREAL, P.Q.**—Employees in one factory ceased work, demanding wages and working conditions in accordance with the union agreement with other employers about the end of July. In connection with picketing a number of strikers were

arrested on charges of assault. A settlement had not been reached at the end of the month.

**BOX FACTORY WORKERS, NEW WESTMINSTER, B.C.**—A number of boys in two establishments of one employer ceased work on July 10, demanding an increase in wages to a minimum of 25 cents per hour from a scale of 17 cents to 43 cents per hour. The management stated that they were paying not less than the provincial minimum rate and would increase the rates when business conditions improved. The sawmill and box factory continued to be operated with the other employees and the strikers were replaced.

**STEEL FOUNDRY WORKERS, SELKIRK, MAN.**—Employees in one establishment ceased work for three hours on July 16, demanding an increase in wages of five cents per hour and recognition of the union shop committee. Negotiations resulted in a compromise on the wage increases, and recognition of the shop committee but not of the union, with adjustments in hours and other working conditions.

**TRUCK DRIVERS, AMHERST-SPRINGHILL DISTRICT, N.S.**—Drivers operating their own trucks ceased work on July 8, demanding an increase in the rates of pay. Work was resumed next day when, as a result of discussion with the provincial engineer, increases in rates were agreed upon, namely \$1.12½ per hour for two yard trucks instead of \$1 and \$1.31 per hour for three yard trucks instead of \$1.25.

**STREET RAILWAY EMPLOYEES, WINDSOR, ONT.**—Motormen, conductors, shop men, etc., ceased work on July 13, their demand that eleven employees should be required to join the union having been refused, also alleging that

the management had refused to negotiate the dispute as required in the agreement. Twenty-four hours later work was resumed, the men having decided to refer the dispute to a Board under the Industrial Disputes Investigation Act. A conciliation officer of the Department of Labour then discussed the matter with the parties as outlined elsewhere in this issue. During the strike one of the pickets was arrested on a charge of stoning a bus.

**STEVEDORES, WINDSOR, ONT.**—Men employed to load and unload boats for certain steamship companies ceased work on July 22, demanding an increase in wages from 30 cents per hour to 50 cents. The employers reported they were paying 35 cents to 40 cents per hour. Work was resumed, as a result of conciliation by a committee of business men, when a minimum rate of 40 cents per hour was agreed upon.

**DAIRY EMPLOYEES, SUDBURY, ONT.**—A number of the drivers and one plant employee of one dairy company ceased work on July 2, demanding the reinstatement of a dismissed driver. The strikers were replaced and some of them secured work elsewhere. This dispute is, therefore, recorded as terminated.

**TEAMSTERS AND GARBAGE COLLECTORS, OTTAWA, ONT.**—The employees ceased work on July 15 in protest against the suspension of three men who refused to work overtime in order to complete the work. Work was resumed after one-half day. The men alleged that the overtime was required because the staff had been reduced. The officials agreed to investigate and adjust the arrangements, stating that the suspension was for only one week, and work was resumed.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, in the review of Strikes and Lockouts in Canada and Other Countries, 1934. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far

as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in June was 29, and 13 were still in progress from the previous month, making a total of 42 disputes in progress during the month, involving 18,000 workers with a time loss of 78,000 working days for the month. Of the 29 disputes beginning in June, 4 were over demands for increases in wages, 2 over proposed wage reductions, 8 over other wage questions, 12 over questions respecting the employment of par-

ticular classes or persons and 3 over other questions of working arrangements. Settlements were reached in 26 disputes, of which 5 were in favour of workers, 11 in favour of employers and 10 ended in a compromise; in 4 disputes, work was resumed pending negotiations.

The strike involving 2,000 coal miners at Blaenavon, Monmouthshire, which began March 25, over certain changes in working conditions involving the dismissal of some older workers, terminated June 22 when revised working conditions offered by the employer were accepted by the workers. These miners were again out on strike for one day, June 28 to June 29, over a dispute over the payment of the minimum wage, but work was resumed pending negotiations.

A strike of 2,000 public utilities workers in gas, electricity, highway and other public services on the Isle of Man began June 3 and terminated the next day when strikers were successful in obtaining increased wages, reductions in working hours and other concessions.

Nearly 5,000 omnibus drivers and conductors in the London area were on strike on July 2,

against disciplinary action against two workers. Work was resumed the next day when the employer agreed to review the decision.

### United States

The number of disputes beginning in April was 170 and 132 were still in effect from the previous month, making a total of 302 disputes in progress during the month, involving 125,000 workers with a time loss of 1,283,000 working days.

A strike of 4,600 shipyard workers at Camden, New Jersey, which began early in May was still in effect at the end of July. Up to this time, efforts of the federal government to effect a settlement had been unsuccessful.

A general strike involving about 23,000 workers at Terre Haute, Indiana, was in effect for 48 hours from July 21 to July 23, in sympathy with enamel plant workers who were on strike for union recognition. The general strike followed the employment of strike-breakers in the enamel plant, but although the general strike was called off July 23, no report of a settlement of the original dispute has been noted.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the same industry or business and the same district, by Orders in Council, of five agreements which are summarized below and amendments to nine other Orders in Council also noted below. Notices of application for changes in agreements already in force under Orders in Council have appeared in the *Quebec Official Gazette*, as follows: employees of glove manufacturers, throughout the province, in the issue of July 6 with correction in issue of July 20; barbers at Montreal in issue of July 27 and bricklayers at Three Rivers in issue of July 27. A statement of a correction to an application for change in the agreement already in force under an Order in Council affecting clothing workers throughout the province appeared in the *Quebec Official Gazette*, July 6. Notices of application for the extension of agreements to all employees and employers in the same trade, industry or business and in the same district, have appeared in the *Quebec Official Gazette*, as follows: tinsmiths and roofers at Quebec in the issue of July 6, building trades at Quebec in the issue of July 20, ornamental iron workers at Montreal in the

issue of July 20 and hairdressers at Montreal in the issue of July 27.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all

employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**BAKERS, MONTREAL.**—An Order in Council, approved June 28, and published in the *Quebec Official Gazette*, July 6, makes obligatory the terms of an agreement (as amended following objections) between certain master bakers and bakery owners and Le Syndicat des Ouvriers de la Boulangerie de Montréal (the Bakery Workers' Union of Montreal).

The territorial jurisdiction comprises the Island of Montreal, Ile Jésus, and the municipalities within ten miles of them.

The agreement is in effect from July 6, 1935, to December 31, 1935, and for another year if neither party gives notice of change.

Hours: 60 per week.

Overtime: time and one-half.

Wages per week: men in charge of oven, in charge of dough or in charge of the pastry, \$22; journeymen bakers, helpers and labourers, \$18; salesmen, \$15. Where higher rates are paid they are not to be reduced for the same or equivalent work while this agreement is in effect.

One apprentice allowed for each five employees or fraction thereof who are employed inside the bakery.

Wages per week for apprentices: first year \$10, second year \$12. After two years, journeyman's rate to be paid.

**BARBERS AND HAIRDRESSERS, HULL.**—An Order in Council, approved July 11, and published in the *Quebec Official Gazette*, July 13, makes obligatory the terms of an agreement between L'Association des Maîtres-Barbiers de la Cité de Hull (the Master Barbers' Association of the City of Hull) and Le Syndicat Interprofessionnel (the Interprofessional Union) representing employed barbers.

The territorial jurisdiction comprises the city of Hull and a radius of 10 miles of its limits.

Agreement to be in effect from July 13, 1935, to July 13, 1938, and until a new agreement is made. With the consent of both parties, the joint committee may modify the agreement in the interest of the trade.

Hours: 56 per week.

Minimum wages for barbers: \$20 per week plus 50 per cent of all receipts in excess of \$31 made by the employee in a week, but the wages of any employee receiving higher than these rates at the time the agreement was signed are not to be reduced. For barbers and hairdressers (men or women) who work by the job, rates are set for different pieces of work. An employed barber to receive from his employer, as a minimum wage, 65 per cent of all work done by himself. No object of any value is to be given to a customer with a view to reducing the minimum prices set. Wages for women must be at least the rates established by the Minimum Wage Board. Journeymen, who due to advanced age or infirmity are unable to give the regular service, may arrange through the joint committee to work for lower rates of wages.

Not more than one apprentice in any one establishment. Apprenticeship lasts two and one-half years.

Weekly wages for apprentices: after six months at the school \$7.50, after 12 months \$10, after 18 months \$12, after two years \$15, after two years and one-half, the journeymen's rate.

**BARBERS AND HAIRDRESSERS, JOLIETTE.**—An Order in Council, approved July 11, and published in the *Quebec Official Gazette* July 13, makes obligatory the terms of an agreement between Les Maîtres-Barbiers et Coiffeurs de Joliette (the Master Barbers and Hairdressers of Joliette) and L'Association des Barbiers et Coiffeurs de Joliette (the Barbers' and Hairdressers' Association of Joliette).

The territorial jurisdiction comprises the town of Joliette and within a radius of 10 miles of its limits.

The agreement is in effect from July 13, 1935, to July 13, 1938, and until a new agreement is made. With the consent of both parties, the joint committee may modify the agreement in the interest of the trade.

The hours between which shops are open are specified, totalling 79 per week. All barbers and men's hairdressers are entitled to 6 consecutive hours off each week except weeks with a holiday.

Overtime to be paid at the regular rate plus 40 cents per hour.

Minimum wages: barbers and men's and ladies' hairdressers (male employees) \$12 per week plus 50 per cent of all receipts in excess of \$20 made by the employee in a week; female hairdressers \$10 per week; extra employees 40 cents per hour; no employer may reduce the wages of an employee receiving more than these minimum rates. For barbers and hairdressers (male and female employees) working by the job, minimum rates are set for each job. No agreement may be made to reduce the wage rates either per hour or job. Journeymen who due to advanced age or infirmity cannot give the regular service may arrange to work for lower wage rates through the joint committee. Wages for women must be at least the rates established by the Minimum Wage Board.

Not more than one apprentice allowed in any establishment. Apprenticeship consists of 6 months at a barbers' school and a year and a half as apprentice in a shop, and apprentices must follow a course of study throughout.

Wages per week for apprentices: after six months at the school \$7.50, after 12 months \$10, after 18 months \$12.

**BARBERS AND HAIRDRESSERS, SHAWINIGAN FALLS.**—An Order in Council, approved July 20, and published in the *Quebec Official Gazette* July 27, makes obligatory the terms of an agreement between L'Union Nationale Catholique des Maîtres-Barbiers et Coiffeurs des Chutes Shawinigan (the National Catholic Union of Master Barbers and Hairdressers of Shawinigan Falls) and L'Union Nationale Catholique des Employés—Barbiers et Coiffeurs des Chutes Shawinigan (the National Catholic Union of Employed Barbers and Hairdressers of Shawinigan Falls).

The territorial jurisdiction comprises the towns of Shawinigan and Grand'Mère.

The agreement is in effect from July 27, 1935, to July 27, 1938, and until a new agreement is reached. With the consent of both parties, the agreement may be modified by the joint committee.

Hours: 57 per week.

Minimum wages for regular time: barbers and hairdressers (male employees) \$15 per week plus 50 per cent of all receipts over \$25 made by the employee in a week, or a minimum of \$18 per week without a percentage of receipts; for female hairdressers a minimum of \$12.50 per week but in no case lower than the rate established by the Minimum Wage Board. No employer may reduce the wages of an employee receiving more than these minimum rates at the time of the signing of the agreement.

For employees working by the job, minimum rates are specified for each piece of work and no object of any value may be given a customer with a view to reducing these rates. Journeymen who due to advanced age or infirmity are unable to give ordinary service may arrange through the joint committee to work for lower wage rates.

Not more than one apprentice in any one establishment. Apprenticeship includes a six months' course in hygiene.

Wages of apprentices: after six months' practice in a shop \$5 per week, after 12 months' practice \$7.50, after 18 months practice \$10.

**\*MILLINERY WORKERS, MONTREAL.**—An Order in Council, approved July 25, and published in the *Quebec Official Gazette*, July 27, makes obligatory the terms of an agreement (as amended following objections) between The Association of Manufacturers of Millinery and Women's and Children's Headwear and the United Hatters, Cap and Millinery Workers' International Union and Local No. 49 of the Union.

The industrial jurisdiction comprises only the industry of manufacturing and making of millinery, women's and children's headwear and does not include the manufacture of men's hats.

The territorial jurisdiction comprises the City and Island of Montreal and a radius of 50 miles of its limits.

The agreement is in effect from July 27, 1935, to March 30, 1936.

\*A similar agreement in the Province of Ontario is summarized on page 736.

Hours: 8 per day, for 5 days with no work on Saturdays, a 40 hour week.

Overtime: no overtime except for a period of 4 to 6 weeks in the spring and 4 weeks in the fall, the period of overtime to be fixed by the joint committee. The maximum amount of overtime is 2 hours per day, 10 hours per week. Overtime to be paid at one and a half times the regular rate.

Wages: the system of work for straw operators, fabric operators, blockers, cutters, drapers and trimmers is that of employment by the week. Wages per week: hand blockers \$31; straw operators, fabric operators, blockers and cutters \$28, drapers \$19, trimmers \$14. No employee is entitled to be paid for the time when he or she is not working even if in the establishment, but this clause is not to contravene any regulation of the Minimum Wage Board. "Workers who have not acquired the necessary qualifications in a particular branch of work and cannot be considered as qualified workers (workers whose productivity is below the established standard or handicapped) may be paid less than the minimum wage; in such cases, the salary to be paid will be fixed by agreement between the employer and the employee subject to ratification by the Joint Committee. However, the number of employees paid less than the minimum wages shall not exceed 25 per cent of the total number of employees in a certain class of work and in a given establishment. If, later, the productivity of such employees is increased, the salary of the workers will be increased accordingly. Revision in connection with possible increased or decreased productivity of the employees in the various classifications, shall take place every three months in accordance with the terms of the collective labour agreement."

Any strike or lockout having for its object a change in the conditions of the agreement relative to wages and hours as approved under the Collective Labour Agreements Extension Act, is prohibited; and no strike or lockout is to be called for any other reason without first submitting the dispute to arbitration in accordance with the provisions of the agreement.

**PLUMBERS AND ELECTRICIANS, QUEBEC.**—An Order in Council approved July 5, 1935, and published in the *Quebec Official Gazette* July 13, changes the wording of the clause in the Order in Council for this trade (LABOUR GAZETTE, July, page 630) affecting maintenance employees, to provide that plumber-electricians engaged in the maintenance of public buildings or of the buildings of a manufacturing establishment, if they are permanent employees and paid monthly or weekly, shall receive a minimum of \$19 per week.

**BUILDING TRADES, THREE RIVERS.**—An Order in Council, approved July 11, and published in the *Quebec Official Gazette*, July 13, adds after clause 2 a new clause to the Order in Council affecting these trades (LABOUR GAZETTE, May, page 421) as follows:

"2-A.—No employer executing works within the territorial jurisdiction determined in the said agreement may employ more than one apprentice carpenter-joiner per five journeymen of the said trade.

"The employer cannot employ an apprentice if there be less than five journeymen of the trade, in his employ."

**PLUMBERS, THREE RIVERS.**—An Order in Council, approved July 11, and published in the *Quebec Official Gazette* July 13, adds a new clause to the Order in Council for this trade (LABOUR GAZETTE, December 1934, page 1143 and amendment in LABOUR GAZETTE, July, 1935, page 632) providing that the minimum wages per hour for foremen pipe-mechanics shall be 10 cents per hour over regular journeymen's rate and the minimum rate for pipe-mechanics contractors hiring their personal services shall be 20 cents per hour over the regular journeymen's rate.

**PAINTERS, THREE RIVERS.**—An Order in Council, approved July 11, and published in the *Quebec Official Gazette*, July 13, adds the following clause after clause 2 of the Order in Council for this trade (LABOUR GAZETTE, January, page 26):

"2-A.—No employer may employ more than one apprentice per five journeymen; it is prohibited for an employer to employ an apprentice if he has not at least five journeymen in his service."

**LONGSHOREMEN (INLAND NAVIGATION WORK), MONTREAL.**—An Order in Council, approved July 5, and published in the *Quebec Official Gazette*, July 13, corrects the Order in Council for this work (summarized in the LABOUR GAZETTE July, page 632) by including a clause providing that the agreement be in effect from the date of the publishing in the *Quebec Official Gazette* of the Order in Council approving it and shall remain in force during the whole navigation season of 1935 or until renewed.

**CLOTHING WORKERS, PROVINCE OF QUEBEC.**—An Order in Council approved July 20, and published in the *Quebec Official Gazette*, July 27, amends the Order in Council for this industry (LABOUR GAZETTE, March, page 238 and April, page 323) as follows:

The following is added after Article I:

"The present agreement does not apply to employers who manufacture the following garments: work shirts, overalls, combination overalls, windbreakers, mackinaw coats, rubberized and leather goods, coarse pants manufactured from pure cotton fabrics or mackinaw cloths and tweeds above 20 oz. in weight.

"All other materials, such as cross-bred serges, flannels of all kinds, worsted and cotton-wool mixtures, come under the jurisdiction of the present agreement."

In zones 2 and 3 (that is throughout the province except for the Island of Montreal and within a radius of 10 miles of it) after a request from any firm, supplemented by a request from the employees, a permit may be granted by the chairman of the Joint Committee of Men's and Boys' Clothing Industry to allow the 48 hours per week to be dis-

tributed so that 10 hours per day are worked the first four days of the week, 8 hours on Friday and no work on Saturdays in that establishment.

Employees engaged in the manufacturing of infants' and children's clothing comprising the ages from birth to 3 years and from 3 to 6 years, not exceeding size 24 are now included. The hours fixed are the same as for men's and boys' clothing workers, that is 44 per week in zone 1 (Island of Montreal and within a radius of 10 miles of its limits) and 48 in the rest of the province. The following weekly wage rates are adopted for zone I: Class A—skilled markers \$30; Class B—trimmers \$27; Class D—tape sewers, off-pressers, sleeve hangers \$22; Class E—pocket makers, shape makers \$18.04; Class F—steam machine pressers, choppers, machine edge basters, buttonhole makers, pocket tackers, joiners, second operators, lining makers, shapers \$14.52; Class G—sleeve makers, lapel makers, armhole basters, coat finishers, button sewers, general hand, canvas makers, canvas basters, underpressers \$12.54; Class H—sleeve lining tackers, sleeve lining sewers, under-collar makers, pocket closer, basting puller, button-hole tacker, cleaners, size ticket sewers, brushers apprentices: \$7.04, \$7.92, \$9.46, \$11.00 and \$12.54. For Zone 2, wage rates are 10 per cent less and in Zone 3, 15 per cent less than the above rates for Zone 1.

Article 10-d of the agreement is modified to read as follows:

"10-d.—The subcommittees shall have the right, subject to ratification by the Joint Provincial Committee, to establish for each class of workmen a minimum production.

"A workman not habitually attaining his minimum production may be entered into a lower class with a special rate fixed for him."

**BRICKLAYERS, PLASTERERS AND MASONS, THREE RIVERS.**—An Order in Council approved July 20, and published in the *Quebec Official Gazette* July 27, adds the following clause after 2-A in the Order in Council for this trade (LABOUR GAZETTE, October 1934, page 912 and March 1935, page 241):

"2-B.—No employer may employ more than one apprentice per ten journeymen; every employer is prohibited to employ an apprentice if he has not in his service at least ten journeymen."

**BUILDING TRADES, VICTORIAVILLE.**—An Order in Council approved July 20 and published in the *Quebec Official Gazette* July 27, amends the previous Order in Council for these trades (LABOUR GAZETTE, July, page 629) by cancelling an exception which was made in the case of one employer to the terms of the agreement in the original Order in Council.

**BUILDING TRADES, THREE RIVERS.**—An Order in Council, approved July 20, and published in the *Quebec Official Gazette*, July 27, modifies the previous Order in Council for these trades (LABOUR GAZETTE, May, page 421) by the following changes in section 3 (b): the wage rate for joint finishers and cement finishers is now 35 cents per hour; the last para-

graph of this same section 3 (b) is replaced by the following:

"If in such municipalities of less than eight thousand souls, the total cost of a building contract exceeds \$10,000.00, workers living in

the said municipality and within a radius of 5 miles from its limits, shall be paid according to the schedule of the present subsection "b".

"However workers coming from other centres shall benefit from the schedule of wages mentioned in subsection "a" of the present section."

## INDUSTRIAL STANDARDS ACT OF ONTARIO

### Agreements Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the *LABOUR GAZETTE*, June, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July issue of the *LABOUR GAZETTE*, summaries are given in this article of the schedules which have thus been approved.

**ELECTRICIANS, TORONTO.**—An Order in Council, dated July 3 and published in *The Ontario Gazette*, July 6, makes binding on all employers and employees in the trade in Toronto and the surrounding specified district, a schedule of wages and hours governing the electrical repair and construction industry.

The schedule applies to all electricians engaged in the trade but does not apply to those working on the assembling, testing, inspecting, rebuilding and repairing of any electrical motors or household appliances when done in licensed electrical repair shops.

The schedule is in effect from July 16, 1935, to June 24, 1936.

Hours: 8 per day, 5 days per week; a 40-hour week with no work on Saturdays. When two or three shifts are worked and when overtime

shifts equal at least 66½ per cent of the regular shift, 8 hours pay for 7 hours work. When work cannot be done during the day, such work may be done as a night shift of not more than 8 hours, at straight time. No employee permitted to work on more than one shift in 24 hours unless overtime rates are paid.

Except for employees required for emergencies on Saturdays, who may work Saturday morning at straight time and Saturday afternoon and evening at double time, all overtime and all work on Saturdays, Sundays, and on eight specified holidays, double time.

Wages for journeymen electricians: \$1.00 per hour; but all work contracted for and accepted prior to June 24, 1935, of which due notice has been given to the board on or before July 25, 1935, may be completed at a rate to be approved by the Board.

Apprentices to be governed by the Ontario Apprenticeship Act, and one apprentice permitted to every three journeymen in a shop.

**BUILDING LABOURERS, TORONTO.**—An Order in Council dated July 3, and published in *The Ontario Gazette*, July 6, makes binding on all employers and employees in the trade in Toronto and the surrounding specified district, a schedule of wages and hours governing common labourers in the building industry.

The schedule is in effect from July 16, 1935 to July 1, 1936.

Hours: 48 per week. When work cannot be done during the day, such work may be done as a night shift of not more than 8 hours. No employee to be permitted to work on more than one shift in 24 hours.

All work done on Sundays and eight specified holidays, double time.

Wages for common labourers engaged on building construction work: 50 cents per hour, but all work contracted for and accepted prior to June 25, 1935, of which due notice has been given to the Board on or before July 25, 1935, may be completed at a rate approved by the Board.

**BRICKLAYERS AND STONEMASONS, TORONTO.**—An Order in Council, dated July 3, 1935 and published in *The Ontario Gazette* July 6, makes binding on all employers and employees in the trade in Toronto and the surrounding specified district the terms of a schedule governing the bricklaying and stonemasonry industry.

The schedule is in effect from July 16, 1935, to July 1, 1936.

The terms of this schedule are similar to those of the schedule for electricians at Toronto summarized above, with the following exceptions:

Overtime to be paid at time and one half; Sundays and eight specified holidays, double time. Employees who may be required for emergencies or in connection with the pouring of concrete on Saturdays to be permitted to work, being paid straight time for the morning and time and one half for Saturday afternoon and evening.

Wages for bricklayers and stonemasons: 90 cents per hour, but all work contracted for and accepted prior to June 25, 1935, of which due notice has been given to the Board on or before July 25, 1935, may be completed at a rate approved by the board.

There is no clause limiting the number of apprentices to be employed.

**PAINTERS, DECORATORS, PAPERHANGERS AND GLAZIERS, TORONTO.**—An Order in Council dated July 4 and published in *The Ontario Gazette*, July 6, makes binding on all employers and employees in the trade in Toronto and the surrounding specified district a schedule of wages and hours governing the painting, decorating and paperhanging industry.

The schedule applies to all those engaged in the painting, decorating, paperhanging and glazing trade.

The schedule is in effect from July 16, 1935, to July 10, 1936.

Hours: 8 per day, 5 days per week, a 40-hour week. Where two or three shifts worked per day, and when the overtime shifts equal at least 66⅔ per cent of the regular shift, 8 hours pay for 7 hours work; however when work cannot be done during the day, such work may be done as a night shift of not more than 8 hours, straight time.

Overtime: time and one half. Not more than four hours overtime to be worked in any one working day. No employee to be permitted to work on more than one shift in 24 hours except at overtime rates. Work on Sundays and holidays, double time.

Wages per hour: spray painters 80 cents until September 1, 1935, after which date it will be 85 cents; painters, paperhangers, decorators and glaziers, 70 cents until September 1, 1935, thereafter 75 cents; painters' labourers, whose work shall be defined by the Board, 50 cents. The board may set a rate less than these for aged or handicapped workers. All work contracted for and accepted prior to July 2, 1935, of which due notice has been given to the board on or before July 25, 1935, may be completed at a rate approved by the board.

Apprentices to be governed by the Ontario Apprenticeship Act.

**LATHERS, TORONTO.**—An Order in Council, dated July 4, 1935, and published in *The Ontario Gazette* July 6, makes binding the terms of a schedule on all employers and employees in the lathing industry in Toronto and the surrounding specified district.

The schedule is in effect from July 16, 1935, to July 10, 1936.

The terms of this schedule are similar to those summarized above for painters and paperhangers at Toronto, with the following exceptions:

"Employees who may be required to set hangers in connection with the pouring of concrete on Saturdays shall be permitted to work, being paid straight time for the morning and time and a half for Saturday afternoon and evening."

"In the case of emergency, consent may be given to work Saturday or nights, by arrangement with the board, at time and one half."

Wages per hour for lathers: 90 cents for all metal furring and tied on lath work and attached ceilings; 70 cents for all classes of work which is nailed on wood furring, such as wood lath, all plaster and insulating boards, metal lath corner beads, corner strippings, etc., or if done on a yardage basis, not less than 7 cents per square yard. All work contracted for and accepted prior to June 28, 1935, of which due notice has been given to the board on or before July 25, 1935, may be completed at a rate approved by the Board.

**PLASTERERS' LABOURERS, TORONTO.**—An Order in Council, dated July 4, 1935, and printed in *The Ontario Gazette* July 6, makes binding on all employers and employees in the trade in Toronto and the surrounding specified district, the terms of a schedule applying to all those engaged as plasterers' labourers in the plastering industry.

The schedule is in effect from July 16, 1935 to July 10, 1936.

Hours: 8 per day, 45 per week. When the hours on one or more days of the week are less than eight, the limit of eight may be exceeded on the remaining days but in no case to more than 9 hours in any one day. Where two or three shifts per day are worked and the overtime shifts equal at least 66⅔ per cent of the regular shift, 8 hours pay for 7 hours' work. When work cannot be done during the day, such work may be done as a night shift of not more than 8 hours, at straight time. No employee to be permitted to work on more than one shift in 24 hours, except at overtime rates.

Overtime rates of time and one half to be paid while plasterers' labourers are actually attending plasterers who are working overtime; any other overtime to be worked at straight time. Work on Sundays and holidays, double time.

Wages for plasterers' labourers: 60 cents per hour. All work contracted for and accepted prior to June 28, 1935, of which due notice has been given to the Board, on or before July 25, 1935, may be completed at the rate to be approved by the Board.

**CARPENTERS AND JOINERS, TORONTO.**—An Order in Council, dated July 4, 1935, and printed in *The Ontario Gazette*, July 6, makes binding on all employers and employees in the trade in Toronto and the surrounding specified district, the terms of a schedule governing all those engaged in the carpentry trade, on building and construction work.

The schedule is in effect from July 16, 1935, to July 10, 1936.

The schedule is similar to the one summarized above for electricians at Toronto, with the following exceptions:

Work on Saturdays in case of emergency and in connection with the pouring of concrete to be permitted, straight time to be paid for the morning and time and one half for Saturday afternoon and evening. Time and one half for all other overtime except for work on Sundays and holidays which is to be paid at double time.

Wages for carpenters and joiners: 80 cents per hour. All work contracted for and accepted prior to June 26, 1935, of which due notice

has been given to the Board on or before July 25, 1935, may be completed at a rate to be approved by the Board.

There is no clause limiting the number of apprentices to be employed.

**SHEET METAL WORKERS, TORONTO.**—An Order in Council, approved July 4, 1935, and printed in *The Ontario Gazette* July 6, makes binding on all employers and employees in the trade in Toronto and the surrounding specified district, the terms of a schedule applying "to the manufacture, fabrication, assembling, erection and/or installation, dismantling, reconditioning, adjustment, alteration, repairing and servicing of all sheet metal work of No. 10 U. S. or its equivalent or light gauge and all other work in connection with the sheet metal construction industry," but which does not apply to "the manufacture of standardized and/or quantity production goods" (the Board to determine the nature of standardized and quantity production goods and to have authority to exempt same from this schedule).

Hours: 8 per day, a 5 day week; 40 hours per week. When two or three shifts are worked, and the overtime shifts equal at least 66⅔ per cent of the regular shift, 8 hours pay for 7 hours work. When work cannot be done during the day, it may be done as a night shift of not more than 8 hours, at straight time. No employee may work on more than one shift in 24 hours except at overtime rates. In finishing up a repair job on regular working days, if to finish will not take more than one hour's time, straight time to be paid.

Overtime: from 5 p.m. to 10 p.m. time and one half; after 10 p.m. on other days and after 5 p.m. on Saturdays, double time. Employees required for emergencies on Saturdays may work, being paid straight time for the morning and time and one half from noon to 5 p.m. All work on Sundays and eight specified holidays, double time.

Wages for journeymen sheet metal workers: 75 cents per hour. All work contracted for and accepted prior to June 27, 1935, of which due notice has been given to the Board on or before July 25, 1935, may be completed at a rate approved by the Board.

Apprentices to be governed by the Ontario Apprenticeship Act.

**MILLINERY WORKERS, PROVINCE OF ONTARIO.**—An Order in Council, dated July 9, 1935, and printed in *The Ontario Gazette* July 13, makes binding on all employers and employees in the industry throughout the province of Ontario, a schedule governing all those engaged in the manufacture or the making of millinery.

The schedule is in effect from July 23, 1935, to February 29, 1936.

Hours: 8 per day, 5 days per week; a 40 hour week, with no work on Saturdays. This clause is only effective after the millinery manufacturers of the province of Quebec have reached a similar agreement as to working hours with their employees and have extended it to the millinery industry for the City of Montreal and an area of approximately 50 miles surrounding the city under the Collective Labour Agreements Extension Act.\* The Board may permit sample makers to work on Saturdays.

Overtime: no overtime permitted except for a period of 4 to 6 weeks in the spring and 4 weeks in the fall, the dates to be decided by the Board, and during this period not more than 2 hours in any day or 10 hours in any week to be permitted. All overtime after the regular closing time to be paid at one and one-half times the regular rate of wages.

All workers to receive two legal holidays a year with pay, namely, Good Friday and Labour Day.

All work to be on a time work basis; no piece work allowed.

Wages per week: all-round blockers \$32, straw operators, fabric operators, blockers and cutters \$29, drapers, \$19, trimmers \$15. (Definitions of these classes of workers are included in the schedule). The Board may set a rate less than the above for aged or handicapped workers, but in no case may there be more than 25 per cent of aged or handicapped workers in any category. The wage schedule does not apply to any aged or handicapped workers whose rate of wages have been set prior to July 1, 1935 between the Millinery Workers' Union and the Millinery Manufacturers' Association. The wages of all workers below the minimum wage schedule may be revised by the Board every three months, and when workers are found to have acquired the necessary qualifications, their wages may be raised to the minimum wage scale.

**FURNITURE WORKERS, PROVINCE OF ONTARIO (EXCEPT TORONTO).**—An Order in Council, dated July 24, 1935, and published in *The Ontario Gazette*, July 27, makes binding a schedule of wages and working conditions on all employers and employees engaged in the manufacture of all wood products of the furniture industry commonly known as household, office and school furniture throughout the Province of Ontario except the city of Toronto and an area of 15 miles surrounding the city.

Hours: 8½ per day, 4½ on Saturday, a 47 hour week.

Overtime to be paid at time and one half and to begin after the first half hour of overtime.

The Board set up under the Industrial Standards Act to define the terms "skilled" and "semi-skilled" workers.

Hourly wage rates in the province exclusive of the city of Toronto and an area of 15 miles surrounding it and exclusive of the district bounded by the cities of Hamilton, Kitchener and Stratford: common or unskilled male labour over the age of 21 years, 28 cents from September 1, 1935, to March 1, 1936, and 30 cents from March 1, 1936, to July 1, 1936; semi-skilled employees a minimum of 35 cents; skilled employees a minimum of 45 cents; boys a minimum of 17 cents.

Hourly wage rates in the area bounded by the cities of Hamilton, Kitchener and Stratford; 2 cents per hour higher than the above rates, except for boys whose minimum is the same, 17 cents.

The employment of minors not to exceed 20 per cent of the total employment in any factory.

Present wages paid to employees higher than the above schedules not to be changed during the period of the agreement.

The Board may set a rate less than the above schedule for aged or handicapped workers.

\*See page 732 of this issue.

## ANNUAL REPORT OF THE DEPARTMENT OF RAILWAYS, LABOUR AND INDUSTRIES OF SASKATCHEWAN

THE sixth annual report of the Department of Railways, Labour and Industries of the Province of Saskatchewan reviews the work of the department during the year ending April 30, 1934.

Subsequently by an Order-in-Council passed on October 16, 1934, certain functions of the Department were transferred to a Bureau of Labour and Public Welfare under the Minister of Municipal Affairs (LABOUR GAZETTE, November, 1934, p. 986). During the session of the Legislature from November 15, 1934, to February 22, 1935, the Bureau of Labour and Public Welfare Act, 1934, was enacted retroactive to September 1, 1934, establishing this as a permanent bureau under the Minister of Municipal Affairs, to administer the various statutes respecting labour previously administered by the Department of Railways, Labour and Industries, except the Steam Boilers Act, the administration of which was assigned to the Department of Public Works. The Department of Railways, Labour and Industries was abolished, its functions other than those pertaining to labour being assigned to various departments.

The present report of the Department of Railways, Labour and Industries deals with the work of the Minimum Wage Board, the Freight Rates Branch and Railway Development, the Industrial Development Branch and Coal Mine Inspection, the Steam Boiler and Industrial Inspection Branch, the Theatres and Cinematographs Branch, the Employment Service Branch and the Provincial Museum. The report also outlines certain legislation enacted during the session beginning on February 15, 1934. The laws of special interest to labour were described in the LABOUR GAZETTE for June, 1934, p. 515.

With reference to strikes and lockouts the report gives figures showing that during the calendar year 1933 there were no strikes or lockouts in Saskatchewan, while in 1932 there were eight industrial disputes involving 365 employees; in 1931, five disputes involving 744 employees; in 1930, two disputes involving 890 employees, with smaller figures for preceding years.

The reports of the Minimum Wage Board and the labour branches of the department are outlined below:

*Minimum Wages for Women.*—During the year the officers of the board made 1,220 general inspections and 67 special investigations in 433 places of business having a total of 2,375 employees. The sum of \$1,667.65 was collected for underpaid wages and \$185.15 in payment for overtime, to the benefit of 54 women. In

eleven other instances it was necessary to lay charges in court against employers for infractions of the Act and regulations, two cases being dismissed and one withdrawn. Eight of these were on account of wages, and in five cases fines were imposed and back wages were ordered to be paid to the amount of \$250.90. In addition three employers were prosecuted and fined, two for infractions of the regulations as to hours and one for failing to keep a register.

All of the orders of the board, numbers one to five inclusive, were revised during the year and the text of each as amended is given in the report. These were published in the *Saskatchewan Gazette* to be effective from November 1, 1933. In making their revision the board considered it inadvisable to make any reduction in the minimum rates of wages as previously set. As employers were having considerable difficulty in paying these rates owing to the economic depression, the board issued a temporary order (No. 6) which permitted a ten per cent reduction on wage rates of less than \$13.00 per week, and a fifteen per cent reduction on rates of wages fixed at \$13.00 per week or over.

*Steam Boiler and Industrial Inspection.*—There were 2,783 boilers, pressure vessels and refrigerating machinery inspected during the year. The number of designs for boilers, pressure vessels and accessories approved and registered with the Department are as follows: Steam boilers, 5; pressure vessels, 51; accessories, 12; total, 68. This is an increase of sixty over the year 1933. Examinations for engineers' certificates were held in Regina throughout the year, and at district inspectors' headquarters at stated periods. As a result of these examinations certificates of the following classes were issued: First class engineers' certificates, 4; second class engineers' certificates, 9; third class engineers' certificates, 28; final traction engineers' certificates, 24; provisional certificates, 199; firemen's certificates, 123; refrigerating certificates, 8; total, 395. The number of licence plates for traction and portable steam boilers issued during the year was 546.

The Steam Boilers Act was amended in March, 1934, and an Act passed providing for a fourth class certificate.

Another Act passed was one governing the repairing of steam boilers and pressure vessels by the welding process.

*Industrial Development Branch.*—The officer in charge of this Branch reports that:—"While no marked improvement in Saskatchewan's industries is apparent at the present time, yet

there are signs that industry generally is assuming a more healthy tone. A survey of the smaller industries of the province shows that during 1933 there were a number of new industries added to the business life of the province. These new industries included: coal mines, sodium sulphate plants, flour mills, oil refineries, lumber yards, bakeries, repair shops, garages, etc. These, and other signs of general improvement, lead to the belief that the depression is gradually giving place to more prosperous times. As in the previous year, field surveys of raw products were curtailed to a minimum. A study of the use of Saskatchewan clays for filtering and clarifying crank case oil was started by Professor W. G. Worcester of the Ceramic Department of the University of Saskatchewan, on behalf of the department, and the results obtained at the end of the fiscal year were sufficiently encouraging to warrant further investigation. Routine work during the year included the answering of enquiries relating to industry and railways; dissemination of tourist literature and road maps and the compiling of industrial statistics. Some aid was also rendered to other branches of the department in the matter of compiling relief statistics."

From the standpoint of the gross value of production, flour and feed mills lead all other

industries with an output value of \$9,468,912 or 26.2 per cent of the total output of the province. Petroleum products, butter and cheese, central electric stations, slaughtering and meat packing, printing and publishing, and the brewery industry, etc., follow in importance in the order named.

Coal production during 1933 showed an increase of 4.5 per cent over the amount produced during 1932. The value of dehydrated sodium sulphate produced also showed a large increase over the previous year, the gain being approximately 79 per cent. The number of men employed in the mines during the winter months was 1,498.

*Employment Service.*—The work of the Employment Service in the province is dealt with in regular articles appearing in the *LABOUR GAZETTE*. A summary of the operations of the nine offices in Saskatchewan indicates that during the year ended April 30, 1934, a total of 30,663 placements were effected. The average wage for farm work prevailing throughout the year was: winter work, board only; spring work, \$10.00 to \$20.00 per month; harvest work, \$1.00 to \$2.25 per day; fall work, after threshing to freeze-up, board only to \$5.00 per month.

## WORKMEN'S COMPENSATION IN BRITISH COLUMBIA, 1934

THE eighteenth annual report of the Workmen's Compensation Board of British Columbia for the year ending December 31, 1934, affords information as to the accidents and claims dealt with by the Board during the year, compensation paid, etc., with analyses by industry, wage loss, average daily wage at time of accident, sex, conjugal state, periods of disability, nationality, and average age of workmen injured; also as to the accident fund, collections from employers, disbursements, etc.

The report states that there had been a decrease in the numbers of accidents each year from 1929 to 1933 paralleling reductions in payrolls, but that in 1934, with an increase in payrolls, there was an increase in the number of accidents. The total number of accidents in industries under the jurisdiction of the board were reported as 36,750 in 1929; 33,285 in 1930; 25,877 in 1931; 19,011 in 1932; 18,274 in 1933; and 22,354 in 1934. These included fatalities as follows: 253 in 1929; 277 in 1930; 125 in 1931; 106 in 1932; 97 in 1933; and 116 in 1934. The figures for 1934 included 9,427 claims resulting from temporary total disabilities for which the sum of \$588,692.10 was awarded; 451 claims resulting from permanent

partial disabilities, for which \$477,322.01 was awarded; in addition to 116 fatalities for which pension awards totalling \$385,003.84 were made and also burial awards to the amount of \$10,065.23. These figures include amounts for pensions payable in the future for permanent disability and to dependents of victims of fatal accidents. In addition to the accidents compensated, medical aid only was given in 12,360 cases and there were about 1,800 accidents in which first aid only was required.

The claims disposed of during 1934 were distributed among the industries in the following percentages: lumber, 41; general manufacturing and delivery classes, 15; metal mining, 12; railroading groups, 8; coal mining, 5; construction, 4; municipal undertakings, 3; all others, 12. The fatalities were distributed as follows: lumber industry, 42; metal mining, 19; railroading groups, 11; coal mining, 7; general manufacturing and delivery classes, 3; and all others, 18. Of the workmen filing claims 65 per cent gave their nationality as British or Canadian. Fifty-one per cent were married. The number of women injured in industry was 135.

Disbursements during 1934 included \$728,488.42 paid as compensation to workers;

\$410,126.10 expended in connection with medical aid, for physicians, hospitals, drugs, etc. In addition, the total amount paid to beneficiaries as pensions on account of permanent disabilities and fatal accidents was \$1,130,326.21. Collections included: from employers, \$1,951,030.52 as assessments and interest, and \$217,015.76 for medical aid; from workers at 1 cent per day for medical aid, \$195,351.64. The cost of administering the accident fund was 3.31 per cent so that "out of every \$100 collected from employers, \$96.69 was used in compensating injured workmen, and the dependents of workmen who lost their lives in accidents under the Act." In the capitalized reserve fund at December 31, 1934, was \$8,832,118.52.

On accident prevention the Board points out that the statistical data in the report demonstrate the need for employers and workmen giving closer study to this problem, that while machinery accidents have been considerably curtailed by enforcement of regulations, the type of accidents which may be prevented by safety devices is limited, particularly in a number of the major industries in the province. During the year a full time safety inspector was employed for the lumber industry, giving special attention to organizing and instructing accident prevention committees. The accident prevention regulations made in 1920 were also revised, the changes to be put into effect soon after the end of the year.

In order to provide information as to the age distribution of unemployed persons 18 years and over, a special analysis has been made of the numbers in this group registered at Employment Exchanges in Great Britain on May 13, 1935. This analysis showed that in the age group 18 to 20 years were found 5.7 per cent of men and 14.5 per cent of women; in the group 21 to 24 years there were 13.3 per cent of men and 20.7 per cent of women; 25 to 34 years, 25.9 per cent of men and 28.1 per cent of women; 35 to 44 years, 19.5 per cent of men and 17.3 per cent of women; 45 to 54 years, 18.2 per cent of men and 12.1 per cent of women; 55 years and over, 10.4 per cent of men and 7.3 per cent of women.

Of the total number of unemployed women on the registers, 61 per cent were single or widowed and 39 per cent married; of those aged 25 years and over, nearly one-half were

The first-aid requirements of the Act also were revised during the year and the employers affected were notified. It is stated that excellent work had been done by a group of trained first-aid attendants who had organized themselves into an association for improving their knowledge of first-aid methods suited to industrial conditions in the province. One result was that the advantages of first-aid facilities and service had been made more generally known in outlying localities.

On the extent of protection to workmen afforded by the Act the report states:

Claims reported under the Act during the past eighteen years have totalled 437,981, or an average of 24,332 for each year. Of these accidents, 3,641 resulted in death, 10,594 left the injured workman with some permanent, partial, or total, impairment in earning capacity. At the end of 1934 there were, as a result of the fatal accidents, 832 widows, 885 children, 119 dependent mothers, 26 dependent fathers, and 25 other dependents receiving monthly allowances under the Act. Of the workmen who suffered permanent impairment, 1,804 were receiving monthly cheques, bringing the number of current pensioners, resulting from fatal and permanently disabling accidents occurring during the past eighteen years, to 3,691. In addition, there are at any given time about 1,500 temporarily disabled workmen and about 3,000 of their dependents participating in the benefits. During 1934 only 394 workmen, or 4 per cent of those who filed claims under the Act, were shown to carry any other accident insurance or benefits to take care of periods of disability necessitated through accidents at work.

married. Of the single women, 46 per cent were under 25 years of age and 68 per cent were under 35 years of age; whilst among the married women nearly 61 per cent were between 25 and 45 years of age. At the ages 25 to 44 the total numbers of married women on the registers were greater than the numbers of single women and widows.

The total of 1,938,636 persons, of or over 18 years of age, on the registers at May 13, included 1,544,915 persons who were registered as wholly unemployed, 305,363 who were on short time, or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment, and 88,358 who are normally in casual employment.

W. F. Roberts, M.D., was recently appointed Minister of Health and Labour for the Province of New Brunswick.

## EMPLOYEE ELECTIONS CONDUCTED BY NATIONAL LABOUR RELATIONS BOARD (U.S.A.)

REFERENCE has been made in the *LABOUR GAZETTE* (April, 1935, page 343; August, 1934, page 722; July, 1934, page 653; and previous issues) to the functions and activities of the National Labour Relations Board (United States) established under the National Industrial Recovery Act. One of the powers invested in the Board was to hold an election "by a secret ballot of any of the employees of any employer, to determine by what person or persons or organization they desire to be represented in order to insure the right of employees to organize and to select their representatives for the purpose of collective bargaining as defined in section 7a of said Act."

The results of such elections over a six months' period have been analysed by George Shaw Wheeler, of the National Labour Relations Board, in an article appearing in a recent issue of the *Monthly Labour Review*, official publication of the United States Department of Labour. Mr. Wheeler states that the National Labour Relations Board conducted 3 elections, and the 17 regional boards conducted 100 elections to determine employee representatives, in the 6-month period, July 10, 1934, to January 9, 1935. In all of these 103 cases the consent of the employer was obtained prior to the holding of the election. In 6 other cases during this period the Board ordered elections held without the consent of the employer, but in all these 6 cases employers obtained injunctions in the Circuit Court of Appeals restraining the elections. He explains that usually an election involved only one unit, but an election of several units might be involved, in case of a single election to determine employee representation for several companies, or of a vote by different classifications of workers in one company for different sets of representatives.

Employees eligible to vote in these elections numbered 45,397 and 36,433 cast a vote. Of the 35,024 votes which were valid, 20,682 (59 per cent) were for trade unions and 12,207 (34.9 per cent) were for company unions or employee-representation plans. There were 2,135 (6.1 per cent) "other" votes, that is, votes not designating any representation. In comparison with the results of elections conducted by the National Labour Board, these figures show a decline in the percentage of votes for trade unions. In the National Labour Board elections trade unions won 69.4 per cent of the valid votes, company unions 28.5

per cent, and no representation was chosen in 2.1 per cent.

An analysis of the results of elections by industries did not reveal any variations in the per cent of votes received by trade-union or company-union representatives which could be attributed to the general characteristics of an industry. More employees voted in elections in the textile industry than in any other. In this industry 54.7 per cent of the 5,291 valid votes were for trade unions, 42.8 per cent were for company unions, and 2.5 per cent designated no representation.

The writer observed that there did not seem to have been any very marked difference in the success of unions in winning elections in small as compared with large establishments. Trade unions won 55 per cent of the 467 units in establishments of 250 or less employees; 71.4 per cent of the 21 units with 251 to 500 employees, 74.1 per cent of the 27 units with 501 to 1,000 employees; and 69.2 per cent of the 13 units with 1,000 or more employees. In terms of votes won, the corresponding percentages were 61, 67, 62.5, and 53.4.

The statistics indicated that the overwhelming number of unions were affiliated. In only 41 of 528 units were independent unions involved; only 3,939 employees were eligible to vote in these units, as compared with 41,458 employees eligible to vote in units in which an American Federation of Labour union was involved. Of the 41 units in which independent unions were involved they won 33, or 80.5 per cent. The American Federation of Labour won 268, or 55 per cent of the 487 units in which it was involved. Within the American Federation of Labour group, the federal labour unions seemed to be somewhat more successful than international unions, winning 76.7 per cent of the units as compared with 53.6 per cent won by the international unions, and 63.4 as compared with 55.7 per cent of the votes. In terms of votes won, the difference between independent unions and American Federation of Labour unions was still large, although less marked than in terms of units won. Independent unions received 71.9 per cent of the valid votes in elections in which they were involved as compared with 57.9 per cent for American Federation of Labour unions.

Dealing with the results of the elections from another angle, the writer states that the National Labour Relations Board made a study of the results of these elections to determine (a) whether the employer had recognized the

elected representatives, (b) whether the employer had bargained with such representatives, (c) whether a written agreement had resulted, and (d) whether the election had resulted in a harmonious solution of the representation problem.

While the statistics were incomplete on all these specific points, yet out of 528 units, reports were available as to recognition of

elected representatives by the company for 468 units; as to bargaining, for 462 units; as to written agreements, for 454 units; and as to harmonious relations, for 451 units. In 267 units the employer recognized the elected representatives, in 261 units bargaining had taken place, in 208 cases written agreements were in effect, and in 245 cases harmonious solution of the representation problem had resulted.

### Annual Report of the United States Secretary of Labour

The twenty-second annual report of the United States Secretary of Labour emphasizes that in the fiscal year 1934 the efforts of the Department were directed, as the basic act provides, towards safeguarding the rights of wage earners, improving their working conditions, and advancing their opportunities for profitable employment.

According to the report, wages, earnings, and employment have increased during the year, and while employment in the consumers-goods industries has improved to a point where it is not far below the normal, employment in the heavy-durable-goods industries has lagged. Conditions are, however, considerably improved over the previous year. Employment in the last month of the fiscal year was, as a whole, approximately 15 per cent greater in private industries than for the same month of the preceding year, and pay rolls were approximately 24 per cent greater.

Commenting on the National Recovery Act the report states:—

"A full year of experience with the National Industrial Recovery Act and the administration thereof has made it quite evident that the operation of that act has led to improvements in working conditions for labour and that through the administration of that act there have come about equally important improvements in the status of labour. The National Industrial Recovery Act is the most comprehensive attempt to improve working conditions in competitive industry that has ever been undertaken by any nation. Through National Recovery Administration codes the regulation of hours of labour of men and women alike has been undertaken for the first time in our history. Whereas State laws regulated the hours of labour of women only, some State laws permitting hours up to as much as 12 a day, under the National Recovery Administration most of the codes prescribe 40 hours a week as the standard, and about 25 per cent of them re-

quire a limit of 8 hours or less as the number of hours to be worked in any one day. Thus we have come practically to a 5-day, 40-hour week as the standard of working time in the United States of America. This has been accomplished by an accompanying increase, rather than a decrease of hourly wages and weekly earnings. The average hourly earnings in manufacturing have increased from June 1933 to June 1934 by 31 per cent. The downward spiral of hourly earnings has been checked and an upward spiral set in motion. The per capita weekly earnings in manufacturing increased in the same period 14 per cent. The cost of living in the meantime increased less than 7 per cent. It is apparent that the average weekly earnings increased more than did the cost of living, and that during this period of decreasing hours wage rates per hour have shown a steady improvement.

"Child labour is prohibited in practically every code; and night work, except in the continuous industries, has practically disappeared. These are substantial gains. In spite of these improvements of working conditions we must bear in mind that commercialized child labour still exists in agricultural work, in domestic service, in the street trades, and in home work for factories or merchandising."

The report of the Conciliation Service indicates that this branch handled, during the year 1,140 cases, covering trade disputes, jurisdictional disputes, strikes, threatened strikes, and lockouts, involving directly and indirectly 916,720 workers. Of this number 885 cases were adjusted. At the close of the last fiscal year 13 cases were pending, 10 of which have since been adjusted, bringing the total number of cases adjusted during the year to 895. Sixty-seven cases were recorded under "Unable to adjust", 134 cases referred to other agencies, and 41 cases closed before the arrival of Commissioners or disposed of otherwise. At the close of the fiscal year 13 cases were pending, to be carried forward into the next fiscal year.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Ratification by Canada of Draft Conventions of International Labour Conference

ON March 1, 1935, by Orders in Council P.C. 543 and 544, the Government of Canada approved the ratification of two draft conventions of the International Labour Conference, one providing for an eight-hour day and 48-hour week for persons employed in industrial undertakings, which was adopted by the Conference in 1919, and the other providing for a weekly rest day for the same class of persons, which was adopted at the 1921 session of the Conference. On April 12, 1935, the Government approved the ratification of the draft convention of 1928 providing for the establishment of minimum wage-fixing machinery (P.C. 934). Resolutions to approve these three conventions were agreed to by the House of Commons and the Senate, respectively, as follows: eight-hour day and forty-eight-hour week, February 8 and 20; weekly rest day, February 8 and 19; minimum wage fixing machinery, March 15, and April 2.

The ratifications of these conventions were communicated on March 21 and April 25, 1935, respectively, by the Prime Minister, in his capacity as Secretary of State for External Affairs of Canada, to the Secretary-General of the League of Nations through the Dominion of Canada Advisory Officer accredited to the League of Nations at Geneva. The instruments of ratification of the Conventions are as follows:

#### Hours of Work (Industry) Convention, 1919—

WHEREAS on the 15th day of January, 1920, the Secretary-General of the League of Nations communicated to His Majesty's Government in Canada a certified copy of a Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week which had been adopted as a Draft Convention by the General Conference of the International Labour Organization at its First Session in Washington on the 28th day of November, 1919:

His Majesty's Government in Canada having considered the aforesaid Convention, hereby confirm and ratify the same and undertake satisfactorily to perform and carry out the stipulations therein contained. In witness whereof this Instrument of Ratification is signed and sealed by the Secretary of State for External Affairs for Canada.

(Signed) R. B. BENNETT,  
Secretary of State for  
External Affairs.

Ottawa, 1st March, 1935.

#### Weekly Rest (Industry) Convention, 1921—

WHEREAS on the 31st day of January, 1922, the Secretary-General of the League of Nations communicated to His Majesty's Government in Canada a certified copy of a Convention concerning the application of the weekly rest in industrial undertakings which had been adopted as a Draft Convention by the General Conference of the International Labour Organization at its Third Session in Geneva on the 17th day of November, 1921:

His Majesty's Government in Canada having considered the aforesaid Convention, hereby confirm and ratify the same and undertake satisfactorily to perform and carry out the stipulations therein contained. In witness whereof this Instrument of Ratification is signed and sealed by the Secretary of State for External Affairs for Canada.

(Signed) R. B. BENNETT,  
Secretary of State for  
External Affairs.

Ottawa, March 1st, 1935.

#### Minimum Wage-Fixing Machinery Convention, 1928—

WHEREAS on the 23rd day of August, 1928, the Secretary-General of the League of Nations communicated to His Majesty's Government in Canada a certified copy of a Convention concerning the creation of minimum wage-fixing machinery which had been adopted as a Draft Convention by the General Conference of the International Labour Organization at its Eleventh Session in Geneva on the 16th day of June, 1928.

His Majesty's Government in Canada having considered the aforesaid Convention, hereby confirm and ratify the same and undertake satisfactorily to perform and carry out the stipulations therein contained. In witness whereof this Instrument of Ratification is signed and sealed by the Secretary of State for External Affairs for Canada.

(Signed) GEORGE H. PERLEY,  
Acting Secretary of State  
for External Affairs.

Ottawa, April 12th, 1935.

Legislation to give effect to the above three conventions was enacted by Parliament at its last session.

In introducing this legislation, it was pointed out by the Prime Minister in the House of Commons on February 8, 1935, that in the opinion of the Government the Parliament of Canada was the competent authority to give legislative effect to these draft conventions. Reference was made to the opinions expressed by the Department of Justice as to the legislative jurisdiction concerning the subject matter of the draft conventions which had been submitted to it at various times and to

the judgment of the Supreme Court of Canada in 1925 that the legislative power in regard to hours of labour was vested in the provincial legislatures under section 92 of the British North America Act, except in so far as works and undertakings which fall within the Dominion jurisdiction are concerned. (LABOUR GAZETTE, July, 1925, p. 671). Two cases involving the power of the Dominion Parliament to implement an international treaty, by enacting legislation in regard to aviation and radio communication, were decided in favour of the Dominion by the Judicial Committee of the Privy Council in 1931 and 1932 respectively. These decisions were based largely on section 132 of the British North America Act which provides as follows:

The Parliament and Government of Canada shall have all Powers necessary or proper for performing the Obligations of Canada or of any Province thereof, as Part of the British Empire, towards Foreign Countries arising under Treaties between the Empire and such Foreign Countries.

The Prime Minister expressed the opinion that in view of these judgments, the Parliament of Canada is competent to implement draft conventions of the International Labour Conference of which Canada is a member and which was established under the Treaty of Versailles to which Canada is a party. The Prime Minister observed, however, that the Treaty of Versailles provides for a federal government exercising its discretion in regard to draft conventions of the International Labour Conference and referring them merely as recommendations of the Conference to the provincial authorities.

The discretion might be exercised by sending the recommendation down to a province and it might be exercised as we now propose to exercise it, by legislation in this House. That discretion which is vested in the Government of Canada was exercised, it is true, in one way at one time. We now propose to exercise it as indicated in the judgments in the radio and aeronautics cases.

Summaries of the Limitation of Hours of Work Act, Weekly Rest in Industrial Undertakings Act and the Minimum Wages Act were published as part of the article on Labour Legislation enacted by the Parliament of Canada in 1935 in the LABOUR GAZETTE for July, 1935.

In addition to the conventions recently ratified by the Dominion Government, four draft conventions of the International Labour Conference were ratified in March, 1926 (LABOUR GAZETTE, May, 1926, p. 472). These relate to employment at sea and include two conventions of 1920, the minimum age for employment of children at sea and unemployment indemnity for seamen in case of the loss or foundering of a ship, and two conventions of the 1921 Conference on the minimum age for employment as trimmers and stokers and the medical examination of chil-

dren and young persons employed at sea. Legislation implementing these conventions was enacted in 1924 as an amendment to the Canada Shipping Act, and was proclaimed in force from January 1, 1926. In the revised Canada Shipping Act, 1934, were incorporated four more draft conventions, two adopted by the International Labour Conference of 1926 on seamen's articles of agreement and the repatriation of seamen and two adopted by the Conference of 1929 to provide for the safety of workers employed in loading and unloading ships and the marking of weights on heavy packages to be transported by vessels. The Canada Shipping Act, 1934, has not been proclaimed in force. Resolutions were adopted by the House of Commons and the Senate on February 8 and 20, 1935, respectively, approving the draft conventions on seamen's articles of agreement, safety of workers engaged in loading and unloading ships and the marking of weights on heavy packages. These conventions have not been ratified. The texts of all the draft conventions mentioned above were published in the LABOUR GAZETTE following the session of the Conference at which they were adopted.

In a study made early in 1935 the United States National Industrial Conference Board, information was received concerning 274 companies, which now operate, or in the past have operated, plans for vacations with pay for wage earners. Of these companies 136 had operated vacation plans throughout the depression, although one company expected to discontinue the plan in 1935; 28 companies had discontinued the plan but had reinstated it; 87 companies had suspended the plan, 5 of which expected to reinstate it in 1935; 10 companies had definitely discontinued the plan, while there were 13 new plans which had been established since 1932. Altogether, therefore, 177 plans were in operation, these companies employing in the aggregate nearly a million workers.

The date at which the plan was adopted was reported for 143 companies. Four of the plans were put in effect prior to 1900, 45 between 1900 and 1919, 75 from 1920 to 1929, and 19 from 1930 to 1935.

No significant changes in the provisions of the plans which affect the eligibility of employees had been made in 104 of the 151 plans for which full information was furnished. In 12 instances the provisions of the plans had been liberalized, the amendments taking the form of lowering the service requirements, increasing the length of vacations, extension of the vacation privilege to additional classes of employees, elimination of tardiness as a factor in reducing the length of vacation, etc. In 35 companies the provisions of vacation plans had been made less liberal.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JULY, 1935

### Reports of Superintendents of the Employment Service

THE employment situation at the end of July was reported by the Superintendents of the Employment Service to be as follows:

Haying was well under way in the Maritime Provinces and all root crops were favourable. No apparent change was registered in logging. Pulpwood was still being cut and peeled and a limited quantity of dressed lumber was being sent Overseas. Fishing was fair and preparations were in progress for the sword fishing season. Coal mines in the New Glasgow area operated from two to five days per week, while salt mines were taxed to capacity to take care of the business coming their way. The majority of coal mines in Cape Breton and vicinity worked five days per week, though two collieries were idle owing to a strike. Iron and steel companies reported no idleness and some departments were running six triple shifts. Dry dock and ship-building companies at Saint John were busy, also manufacturing plants at East Saint John and Coldbrook. Other manufacturing industries, particularly breweries and factories handling foodstuffs, were fairly well employed. No new developments were reported in local building construction, although a small amount of repair work was being completed and at West Saint John extra hands were hired as construction work there expanded. Highway construction, likewise, was in progress. Tourist travel was at its height, but freight traffic was rather quiet at Halifax. Trade was fair. In the Women's Division a good demand existed for domestics and placements were made accordingly.

There were many calls for farm hands in the Province of Quebec, but logging was quieter than previously recorded. Mining was active at Rouyn. Manufacturing was reported as follows: Hull, paper, match and clothing industries in full operation; Montreal, little change noted, rubber, shoes and textiles quiet, tobacco and clothing busier and iron and steel fairly good; Quebec City, leather, some improvement, but other lines running on reduced time; Rouyn and Sherbrooke, quiet; Three Rivers, all factories normal, with conditions in the paper industry slightly better. Building and highway construction, throughout the greater part of the Province, was more active, while Montreal continued to give miscellaneous employment to a number of men. Boat and railway transportation was good at Quebec City, but quiet at Three Rivers. Trade was more favourable. An increase was noted in the Women's Division, in the place-

ment of female workers, many calls being received for help in domestic service.

A heavy demand existed for farm hands in Ontario, with little difficulty experienced in interesting applicants in vacancies on a day wage basis, but some trouble in getting them to take employment by the month. The action of the Government in allowing married relief recipients to take farm employment and still have their families retained on relief and themselves allowed to keep their earnings eased the situation considerably, for more men were willing to take work offered under this plan. Fruit picking had commenced in the Niagara Peninsula. Activity in logging, although somewhat ahead of that of previous years, had fallen off, as the pulpwood peeling season was almost at an end. Mining was active at Timmins, but slow at Port Arthur. Seasonal slackness was in evidence in some of the manufacturing industries, particularly agricultural implements, furniture, automobile and auto accessories, while other lines were fairly busy, especially iron and steel foundries, shoes, textiles, soft drinks and fruit and vegetable canning factories. Little change was recorded in building construction, with not much call for help. Highway construction also was in progress and extra-gang and section men had found work on the C.N.R. at Port Arthur. Grain shipments from Fort William remained steady. In the Women's Division some industrial placements were made, while the demand for help in domestic service continued fair, with the usual scarcity of experienced cooks and cooks-general.

Many requests for farm help were recorded in the Prairie Provinces and in some localities a scarcity of suitable applicants was noted. Crops were reported to be fair, except in districts where damage was caused by hail or rust. There was also a fairly good demand for married couples on farms, but as most of the orders specified couples without children, a little delay sometimes occurred before these vacancies were filled. Logging was quiet, also mining, as many of the mines were undergoing their annual overhaul, preparatory to the opening of the season. Manufacturing was unchanged. Building construction was a little busier, but relief work on government projects continued. An increase in requests for women workers was reported from the household division, many girls, however, were unwilling to take work in the country.

Fewer orders for farm help were listed in British Columbia, although several hay makers and dairymen had been placed. Some damage from hail resulted in the Okanagan Valley

and owing to the small crop of stone fruits, little help was asked for in the orchards. Logging was fairly busy, with saw and shingle mills working steadily, but mining was quieter. Reduction plants in the fishing industry on the West Coast were operating full time, giving employment to about 500 men. Apart from repair work, little new building construction was taking place. National Defence camps were provided as relief depots for the unemployed. Labour troubles still handicapped the waterfront at New Westminster and Vancouver, while at Prince Rupert dry

dock and shipyards were quiet, longshore work fair and shipping active. At Victoria, shipyards were busy. A new association had been formed during the labour troubles at the latter port, which signed an agreement with the employers for all work on the waterfront, thus all ships were cleared on time, the new union handling all the work. Fewer positions were available for women in domestic service, as many families were away on summer holidays. Orders for cooks-general were also hard to fill, due to a scarcity of experienced applicants.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1935

**R**EPORTS received from the offices of the Employment Service of Canada during the quarter April to June, 1935, indicated a decrease in business transacted when a comparison was made with the corresponding quarter of 1934, as there was a loss of 29 per cent in vacancies and of nearly 31 per cent in placements effected. Farming, trade, transportation and finance showed increased vacancies and placements, the highest gains being in the two first-named groups, but these expansions only offset in a small way the heavy decline registered in construction and maintenance, the industrial division in which relief placements were recorded. Smaller losses were also shown in services, manufacturing, logging and mining. Provincially, New Brunswick and Quebec alone reported more vacancies and placements than during the second quarter of last year, all other provinces reporting decreases, the largest of which was in Ontario, with smaller reductions in British Columbia, Manitoba, Nova Scotia, Saskatchewan, and Alberta, the marked decline in the placement of relief workers being the determining factor in the provinces showing reductions.

From the chart on page 760 which accompanies the article on the work of the employment offices for the month of June, 1935, it will be seen that the curve of vacancies and of placements in relation to applications declined during the first half of April and also during the month of June, but throughout the remainder of the quarter followed an upward trend, the peak of the curve being reached at the end of May when the ratio of vacancies was 59.1 and that of placements 55.3 in contrast with the highest level of the corresponding quarter last year, which was registered during the first half of June and stood at 68.7 for vacancies and 65.4 for placements. At the close of the quarter under re-

view the ratios were about 15 points below those recorded at the close of the corresponding period last year. During the period April to June, 1935, there was a ratio of 55.1 vacancies and 50.8 placements for each 100 applications for employment, as compared with 61.1 vacancies and 57.6 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,175, of applications registered 2,134, and of placements effected 1,085, as compared with a total daily average of 1,616 vacancies, 2,646 applications, and 1,524 placements in regular and casual employment during the second quarter of 1934.

During the three months April to June, 1935, the offices of the Service reported that they had made 84,244 references of persons to positions and had effected a total of 79,202 placements, of which 47,581 were in regular employment and 31,621 in casual work. Of the placements in regular employment, 34,662 were of men and 12,919 of women, while casual work was found for 21,258 men and 10,363 women. A comparison with the same quarter of 1934 showed that 114,277 placements were then effected, of which 64,604 were in regular employment and 49,673 in casual work. Applications for employment during the period under review were received from 117,018 men and 38,759 women, a total of 155,777 in comparison with a registration of 198,401 persons during the same period of 1934. Employers notified the Service during the second quarter of 1935 of 85,751 positions, of which 56,498 were for men and 29,253 for women, as compared with 121,154 opportunities for employment offered during the corresponding period of 1934.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1935

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JUNE, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on July 1 was 9,323, the employees on their payrolls numbering 934,262 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June was 1,684 having an aggregate membership of 161,789 persons, 15.4 per

cent of whom were without employment on July 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of July, 1935, as Reported by the Employers

The general industrial situation showed further improvement at the beginning of July, according to information received by the Dominion Bureau of Statistics from 9,323 employers, whose staffs aggregated 934,262 persons, as compared with 915,746 in the preceding month. Although this increase of 18,516 was considerable, it was smaller than that recorded on July 1, 1934, and was also less than the average gain between June 1 and July 1 in the preceding fourteen years for which statistics are available; as a result, employment at the latest date was at a rather lower level than at the beginning of July of last year, though it was in considerably greater volume than on July 1, 1933 or 1932. The falling-off as compared with July 1, 1934, was largely due to curtailment in work on highways and roads on which the number of reported workers was smaller by over 50,000 at the beginning of July, 1935, than on the same date last summer. The crude index, based on the 1926 average as index, stood at 99.5 at the latest date, as compared with 97.6 on June 1, 1935, and with 101.0 on July 1, 1934, while on the same date in the other years since 1920, it was as follows: 1933, 84.5; 1932, 88.7; 1931, 103.8; 1930, 118.9; 1929, 124.7; 1928, 117.7; 1927, 109.7; 1926, 105.0; 1925, 98.0; 1924, 97.1; 1923, 100.7; 1922, 92.2 and 1921, 88.6.

Employment in manufacturing showed continued advances, contrary to the usual seasonal trend on July 1; most of the gain over June 1 occurred in the food and lumber groups. Mining (except of coal), communications,

services, trade, transportation and construction and maintenance also indicated substantial improvement. The increases in all of these except construction considerably exceeded the average gains indicated on July 1 in the years 1921-1934. On the other hand, logging was seasonally quieter than in the preceding month, and within the group of factory employment, there were large losses, also seasonal in character, in leather, textile and iron and steel plants.

### Employment by Economic Areas

The trend was decidedly upward in all five economic areas; the largest additions to staffs were in Ontario and the Prairie Provinces. The index numbers of employment in all economic areas except Ontario were higher than on the same date of last year, and were generally higher than on July 1 in 1933 or 1932.

*Maritime Provinces.*—Statements were tabulated from 659 firms employing 76,030 workers, as against 72,329 in the preceding month. This increase brought the index to 106.7, or 6.3 points higher than at the beginning of July in 1934, when the gain over the preceding month had been much smaller. The advance on the latest date, however, was rather less than the average indicated on July 1 in the years since 1920. Railway and highway construction recorded substantial improvement on the date under review, while there were also additions to staffs in lumber mills and in logging, transportation, communications, services and trade. On the other hand, pulp and paper

and iron and steel plants and coal mining were slacker, the losses in the last-named being seasonal in character.

*Quebec.*—Manufacturing, on the whole, showed moderate improvement in Quebec, there being large increases in animal food, lumber, pulp and paper, tobacco and beverage, non-ferrous metal and non-metallic mineral factories; leather, textile and iron and steel plants, however, showed seasonal curtailment. In the non-manufacturing industries, mining, services, transportation and construction reported considerably heightened activity. The improvement in building and highway construction was most marked. The general gain

ported being just over 3,900 workers; the gain noted on the date under review was, therefore, rather above the average, although it was very much smaller than that indicated on the same date in 1934, when the index was over seven points higher. The improvement on July 1, 1935, was fairly widely distributed, food, lumber, chemical, clay, glass and stone, electrical apparatus and non-metallic mineral product factories, mining, transportation, trade and construction showing considerable gains. The increases in construction were greatest, occurring mainly in the highway and railway divisions. On the other hand, leather, textile and iron and steel works were seasonally

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

during the month was smaller than that reported on July 1 in 1934, being also rather less than the average increase recorded in the last fourteen years. The forces of the 2,244 co-operating employers aggregated 260,923 persons, compared with 257,889 on June 1, or an addition of 3,034. The index on the latest date was fractionally higher than on July 1, 1934.

*Ontario.*—There was an increase in activity in Ontario, where the 4,100 firms whose statistics were tabulated reported 392,961 employees, or 4,208 more than on June 1. Employment in previous years has usually, though not invariably, advanced on July 1 as compared with the preceding month, the average increase re-

ported being just over 3,900 workers; the gain noted on the date under review was, therefore, rather above the average, although it was very much smaller than that indicated on the same date in 1934, when the index was over seven points higher.

*Prairie Provinces.*—The most important expansion recorded in this area was in construction, notably on the highways, but railway construction, services, trade, transportation, communications, mining and manufacturing also reported gains; those in the last-named occurred largely in the animal food and lumber groups. On the other hand, logging was seasonally slacker, and building also afforded less employment. In addition to the general improvement shown in industrial employment,

there have doubtless been seasonal increases in agricultural work, which, though not recorded in this survey owing to the generally small unit of production, must be an important factor in the general situation. Data were compiled from 1,348 employers with an aggregate staff of 121,438 workers on July 1, as against 116,276 in their last return. This gain of 5,162 workers exceeded the average increase on July 1 in the last fourteen years. The index, at 96.3 on the date under review, compared favourably with that of 94.1 on July 1, 1934.

*British Columbia.*—Continued advances were made in British Columbia; the increase brought the index to 99.5, the highest since the end of 1930. A total working force of 82,910 persons was employed on the date under review by the 972 firms whose data were received and who had 80,499 on their staffs at the beginning of June. Manufacturing, particularly of food and lumber products, was seasonally busier on July 1, 1935, and mining, communications, transportation, construction and trade also reported considerable improvement, while the tendency was downward in logging.

### Employment by Cities

Five of the eight cities for which separate tabulations are made—Quebec City, Ottawa, Hamilton, Winnipeg and Vancouver—showed heightened activity, while the tendency was unfavourable in Montreal, Toronto and Windsor and the adjacent Border Cities. Employment generally in these cities was brisker than at the beginning of July of last year.

*Montreal.*—Employment in Montreal showed a small decline from the preceding month, mainly in manufacturing; animal food, tobacco and beverage and musical instrument plants reported heightened activity, but there were larger reductions in textile, leather and iron and steel plants. Work on the streets and roads and in trading establishments also showed a falling-off, while services, building construction, transportation and communications afforded rather more employment. A combined working force of 129,925 persons was indicated by the 1,307 co-operating employers, who had 130,440 workers on June 1. An increase had been noted on July 1, 1934, when the index was practically the same, standing at 86.7 as compared with 86.8 at the latest date.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Feb. 1.....	94.6	100.1	89.5	100.2	89.2	89.6
Mar. 1.....	96.4	98.6	91.3	103.5	87.2	91.9
April 1.....	93.4	95.8	85.9	100.7	86.9	91.8
May 1.....	95.2	97.4	89.7	101.7	87.9	92.6
June 1.....	97.6	101.6	93.8	101.6	92.2	96.6
July 1.....	99.5	106.7	94.8	102.7	96.3	99.5
Relative Weight of Employment by Economic Areas as at July 1, 1935.....	100.0	8.1	27.9	42.1	13.0	8.9

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

*Quebec.*—General improvement was reported in Quebec, where statements were tabulated from 166 firms with 12,997 employees, compared with 12,556 in the preceding month. Employment in trade, services, manufacturing and building increased moderately. The index was higher than at the beginning of July, 1934, when a general decrease had been shown.

*Toronto.*—There was a small contraction in industrial activity in Toronto on July 1, when trade, construction and transportation showed improvement that was offset by declines in manufacturing, notably of iron and steel, textile and leather products. The 1,385 employers furnishing data reduced their staffs by 256 workers to 118,809 at the beginning of July. A general gain had been reported on the same date of last year, but the July 1, 1935, index, at 97·7, was 3·6 points higher than that for the same date in 1934.

*Ottawa.*—Statistics were received from 169 employers with 13,603 persons on their paylists, or 333 more than in the preceding month. There were increases in manufacturing, notably in lumber and iron and steel factories, and in building construction, while other industries showed little general change. On the

whole, the situation on July 1, 1934, had remained unchanged from the preceding month; the index then was lower than in the month under review.

*Hamilton.*—There was a further though slight advance in Hamilton, where employment was in greater volume than on the same date of last year; 97 workers were added to the forces of 267 firms furnishing information, bringing them to 30,009 at the beginning of July, 1935. Manufacturing reported moderate improvement, and trade and transportation also showed small gains, but construction was quieter. This general increase was the sixth recorded in Hamilton since the beginning of the year.

*Windsor and the adjacent Border Cities.*—Reduced activity, mainly in iron and steel plants, caused a decline of 1,330 persons in the staffs of the 165 reporting employers, who had 15,382 in their employ on the date under review. The index was higher than on July 1, 1934, although the reduction then indicated had involved fewer workers.

*Winnipeg.*—Communications, transportation and construction registered moderate advances, and the tendency was also upward in manufacturing and trade, while services were slightly

July 1.....	86·8	99·0	97·7	106·2	93·9	113·4	89·1	99·9
Relative Weight of Employment by Ci- ties as at July 1, 1935	13·9	1·4	12·7	1·5	3·2	1·6	4·1	3·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

slacker. An aggregate working force of 38,059 employees was reported by the 447 co-operating firms; this was 919 more than on June 1. The improvement noted on the same date of a year ago involved a smaller number of persons, and the index of employment, at 82.7, was then lower by 6.4 points.

*Vancouver.*—The trend of employment in Vancouver continued favourable, according to information from 404 establishments employing 31,689 workers, as against 30,614 in the preceding month. There were increases in practically all groups, those in construction, communications, transportation and manufacturing being most pronounced; within the group of factory employment, the greatest expansion was in lumber mills. A similar increase, on the whole, had been recorded by the firms making returns for July 1, 1934, when the index was some ten points lower.

Index numbers by cities are given in Table 2.

### Employment by Manufacturing Industry

Employment in manufacturing showed a further increase on July 1; although this was smaller than in either the preceding month or the same month of last year, it was important

in that it reversed the slight decline which the experience of the last fourteen years shows is the average change between June and July. The 5,537 establishments reporting had 495,013 employees on the date under review, as compared with 494,267 on June 1. The index rose from 98.4 in the preceding month to 98.5 on July 1, 1935, while the seasonally corrected index also showed a slight advance from 95.7 to 95.9 at the latest date; this was higher than in any other month since June, 1931.

An analysis of the data for July 1 shows pronounced improvement in the animal and vegetable food and lumber groups, with smaller gains in the musical instrument, tobacco, beverage, clay, glass and stone, electric current, electrical apparatus, non-ferrous metal and non-metallic mineral product industries. On the other hand, leather footwear, textile and iron and steel plants were seasonally slacker, the greatest losses being in the last-named group.

*Animal Products, Edible.*—Additions to staffs were recorded in this group, 997 persons being taken on by the 303 establishments making returns, which had 23,787 in their em-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES  
(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manu- facturing	Logging	Mining	Communi- cations	Trans- portation	Con- struction	Services	Trade
July 1, 1921.....	88.6	87.6	63.9	96.5	92.3	92.0	77.7	90.2	92.0
July 1, 1922.....	92.2	91.1	56.7	98.7	86.5	100.8	96.6	87.2	90.0
July 1, 1923.....	100.7	101.3	87.4	106.3	88.8	103.6	103.5	96.2	91.6
July 1, 1924.....	97.1	94.9	78.4	104.5	96.0	101.6	108.0	102.3	91.4
July 1, 1925.....	98.0	96.4	69.0	101.7	96.7	98.1	115.0	102.7	93.1
July 1, 1926.....	105.0	103.1	80.0	99.8	101.5	102.9	133.0	105.3	97.6

Dec. 1.....	98.9	91.3	198.6	122.9	79.8	80.1	100.3	115.2	126.0
Jan. 1, 1935.....	94.4	87.4	181.3	119.1	78.6	76.2	87.9	115.2	130.6
Feb. 1.....	94.6	90.1	183.4	120.3	77.8	76.2	87.2	111.9	116.6
Mar. 1.....	96.4	92.7	166.9	118.8	77.5	76.5	94.2	111.7	116.7
Apr. 1.....	93.4	93.9	104.3	117.7	77.7	76.3	80.2	111.4	117.4
May 1.....	95.2	95.6	93.9	116.2	77.5	80.1	84.7	116.4	119.3
June 1.....	97.6	98.4	96.0	119.2	79.2	79.9	89.5	118.5	119.9
July 1.....	99.5	98.5	82.2	121.5	80.8	82.7	101.1	123.6	122.1
Relative Weight of Employment by Industries as at July 1, 1935.....	100.0	53.0	2.4	6.0	2.3	10.5	12.7	2.8	10.3

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

ploy. Considerable improvement was noted in fish-canning in British Columbia, and there were also gains in dairies and meat-packing plants. The index on July 1, 1935, was somewhat lower than on the same date in 1934, when a decidedly larger increase had been indicated.

*Leather and Products.*—Statements were received from 285 manufacturers in this division, employing 20,928 workers, as compared with 21,941 in the preceding month. The bulk of the decrease took place in boot and shoe factories and occurred mainly in Quebec and Ontario. The situation was better than that recorded on July 1 of last year, although a smaller decline had then been reported.

*Lumber and Products.*—Rough and dressed lumber mills showed substantially heightened activity, and employment in container, furniture and other wood-using factories was brisker, while vehicle works released employees. The general increase considerably

exceeded that noted on July 1, 1934, and the index then stood at 74.7, as against 80.8 on July 1, 1935. A combined working force of 42,421 employees was reported by the 811 firms co-operating on the date under review; this was 2,743 more than at the beginning of June. All provinces shared in the upward movement, but the gains in Ontario were greatest.

*Musical Instruments.*—Employment in musical instrument works increased on July 1; 35 manufacturers employed 1,003 persons, or 218 more than in the preceding month, while the situation was also more favourable than at the beginning of July, 1934.

*Plant Products, Edible.*—The resumption of operations in canneries caused an important advance, which, however, was much smaller than that registered on July 1 of a year ago, when the index was between three and four points higher. Returns were received from 432 manufacturers of vegetable foods, having 29,754 operatives, as against 28,511 in their last

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	July 1, 1935	June 1, 1935	July 1, 1934	July 1, 1933	July 1, 1932	July 1, 1931	July 1, 1930

Miscellaneous.....	6	123.8	123.5	116.0	98.7	99.8	107.2	110.7

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

report. The improvement in Ontario and British Columbia was most noteworthy.

**Pulp and Paper Products.**—There was a decline in printing and publishing houses and in the production of paper goods, while pulp and paper mills were busier. The 584 co-operating employers in the Dominion reported 58,474 workers, compared with 58,420 on June 1. Large advances had been indicated in the group as a whole on July 1, 1934, but the index of employment was then slightly lower.

**Rubber Products.**—Little general change was registered in rubber factories, in which employment was slacker than in the summer of last year. Statistics were tabulated from 53 firms with 11,697 employees on the date under review, as compared with 11,639 in the preceding month.

**Textile Products.**—A further contraction, mainly in Quebec and Ontario, was reported by the 981 co-operating textile manufacturers, who employed 94,528 workers, or 1,683 fewer than at the beginning of June. The greatest losses were in cotton, headwear and garment and personal furnishing factories, while hosiery and knitting mills showed improvement. A larger decline had been indicated on the corresponding date in 1934, when the level of employment was lower than on the date under review. The decrease was seasonal in character, the tendency having been downward on July 1 in ten of the fourteen preceding years for which statistics are available.

**Tobacco, Distilled and Malt Liquors.**—Employment in this division showed a moderate increase, according to data from 168 establishments, employing 15,423 persons, compared with 15,143 in the preceding month. The increase occurred mainly in Quebec. A greater gain had been noted on the same date last year, but the index was then eight points lower.

**Chemicals and Allied Products.**—There was a small advance in activity in chemical factories; 194 firms had 10,420 employees, compared with 10,327 on June 1. Ontario reported most of the additions to staffs. A reduction had been shown at the beginning of July, 1934, and employment was then in smaller volume.

**Clay, Glass and Stone Products.**—Further improvement was indicated in building material plants, the 196 co-operating establishments enlarging their forces by 379 persons to 8,958 on the date under review. Most of the gain was in Ontario. The level of employment was higher than on July 1 of a year ago, when the trend was also upward.

**Electric Current.**—A gain was registered in electric current plants, 99 of which reported a

combined working force of 14,325 persons, as against 14,009 at the beginning of June. The index was four points higher than on the same date in 1934, when a smaller improvement had been indicated.

**Electrical Apparatus.**—There was an increase of 246 in the staffs of the 109 manufacturers furnishing data, who had 12,105 employees on July 1. Firms in Ontario reported heightened activity, while elsewhere the changes, on the whole, were slight. The number engaged in the production of electrical apparatus was much larger than on July 1 in the preceding year, when a slight decline had taken place.

**Iron and Steel.**—For the first time since the opening of 1935, the trend in iron and steel factories was downward. The experience of the last fourteen years shows that curtailment generally occurs between June 1 and July 1; a slightly larger decrease had been indicated on July 1 of a year ago, when employment was in much smaller volume. Improvement on the date under review was noted in the general plant machinery group, while the automobile and other vehicle, crude, rolled and forged, agricultural implement, wire and wire products and foundry and machine shop divisions showed contractions. Returns were compiled from 830 employers whose forces aggregated 109,893 workers, as against 113,500 in the preceding month.

**Non-Ferrous Metal Products.**—A further increase was registered in non-ferrous metal products, mainly in the aluminum group. The 156 co-operating manufacturers employed 19,407 operatives, or 168 more than in the preceding month. A small gain had been reported on the same date of last year, but the index was then decidedly lower.

**Mineral Products.**—Continued gains were shown in this division, in which the index, at 138.1, was fractionally higher than in July, 1934. Statistics were received from 127 employers whose staffs rose from 13,605 on June 1, 1935, to 13,946 on July 1.

### Logging

There was a seasonal reduction in logging, 3,785 persons being released from the staffs of the 286 reporting firms, who employed 22,884 on July 1. An advance had been noted on the same date in 1934, when the index was higher by four points.

### Mining

**Coal.**—There was a seasonal decrease in employment in coal mines, 98 of which employed 22,145 men, as compared with 22,485 in their last report. There were losses in this group

in the Maritime Provinces, while greater activity was indicated in the Western coal fields. A smaller decline had been noted on July 1 of last year, but employment was then in rather less volume.

**Metallic Ores.**—Another advance was reported in metallic ore mines; statements were tabulated from 161 operators employing 26,517 persons, or 788 more than on June 1. All but the Prairie Provinces shared in the gain. The general index, at 223.2, was nearly 44 points higher than on July 1, 1934.

**Non-Metallic Minerals, other than Coal.**—There was a further increase in the payrolls of the 82 co-operating non-metallic mineral mines, which employed 6,973 workers, or 615 more than in the preceding month. Employment was much brisker than at the beginning of July a year ago, when a decidedly smaller gain had been recorded.

### Communications

Continued improvement was indicated in this group, according to the reporting companies and branches, which had 21,375 persons on their payrolls, compared with 20,949 on June 1. Employment on both telephones and telegraphs was more active. A larger gain had been recorded on July 1, 1934; the index of employment in this division, however, was then fractionally lower.

### Transportation

**Street Railways and Cartage.**—Activity in the local transportation group showed an increase, 203 firms having 25,171 workers in their employ, as against 24,488 in the preceding month. A smaller advance had been noted on the same date in 1934, when the index was slightly lower.

**Steam Railways.**—Statistics tabulated from 100 companies and divisional superintendents in the steam railway operation group showed that they employed 57,674 workers at the beginning of July, or 1,685 more than in the preceding month. Expansion on a smaller scale had taken place on July 1 of last year, but employment was then slightly above its level at the time of writing. All five economic areas reported improvement on the date under review.

**Shipping and Stevedoring.**—There was an increase in employment in water transportation, 100 companies having enlarged their staffs by 1,040 employees, bringing them to 15,005 on July 1. The index, at 89.9, was practically the same as at the beginning of July, 1934, when a rather small gain had been indicated. On the date under review, there were general

advances, those in Ontario and British Columbia being largest.

### Construction and Maintenance

**Building.**—Improvement in employment was noted in building construction; the increase was smaller than that indicated on July 1, 1934, when activity in this group was lower. The 675 co-operating contractors employed 23,167 workers, as compared with 21,694 in the preceding month. The expansion was mainly in Quebec and Ontario.

**Highways.**—The number of men engaged on road construction and maintenance increased on the date under review, when the 349 employers furnishing data had 62,823 employees, or 8,947 more than at the beginning of June. There were considerable advances in all provinces except British Columbia, where the situation was practically unchanged. Employment in this group was not so brisk as on July 1, 1934.

**Railway.**—A combined working force of 32,507 persons was reported by the 35 contractors and divisional superintendents whose statistics were tabulated, and who had 29,077 employees on June 1. All provinces shared in the increase. Much smaller additions to staffs were noted on July 1 a year ago, but the index then was 8.5 points lower than on the date under review, when it stood at 81.5.

### Services

Continued expansion was shown in the service group, according to returns from 455 employers with 26,671 persons on their staffs, as compared with 25,560 in the preceding month. The opening of the summer-hotel season caused the gain, which was on a rather larger scale than that reported on July 1, 1934, when employment was in less volume. The tendency was favourable in all provinces, except Ontario, where no general change occurred; the largest increases were in Quebec and the Prairie Provinces.

### Trade

Wholesale houses showed slightly greater activity, and retail stores reported a substantial gain in personnel. The additions to staffs in the group as a whole considerably exceeded the average increase recorded on July 1 in the last fourteen years. Statements were tabulated from 1,158 firms having 96,337 employees, as against 94,649 at the beginning of June, 1935. Employment was in greater volume than on the same date last summer, when marked improvement had also been indicated by trading establishments.

## TABLES

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the

columns headed "relative weight" show the proportion that the number of employees reported in the indicated areas or industry is of the total number of employees reported in Canada on the date under review.

## (2) Unemployment in Trade Unions at the Close of June, 1935

Unemployment as used in the following report has reference to **involuntary idleness due to economic causes**. Persons who are engaged at work other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is

from June of last year when unemployment stood at 18.0. In all provinces, with the exception of Nova Scotia, industrial activity tended upon from May, British Columbia unions with a 4 per cent gain showing the greatest expansion, due mainly to the better situation obtaining for navigation workers. Alberta unions indicated improvement of around 2 per cent, the coal mines affording slightly increased employment, while the advances noted in the other provinces were

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

based, it should be understood that such figures have reference only to the organizations reporting.

Continued advancement in the volume of work available to local trade union members was apparent at the close of June, though the change from the previous month was slight. According to the reports received from 1,684 labour organizations at the end of the month, with an aggregate of 161,789 members, 24,991 were without work, a percentage of 15.4, in contrast with 15.9 per cent in May. Improved conditions were reflected also

fractional. Mine closings in Nova Scotia during June affected a considerable number of workers and were almost entirely responsible for the unfavourable movement shown in that province from May. Compared with the returns for June of last year Ontario, Manitoba, Saskatchewan, Alberta and British Columbia unions all registered employment expansion of moderate proportions during the month reviewed, Quebec unions recording gains on a smaller scale. Employment conditions in Nova Scotia and New Brunswick, however,

showed little variation from June a year ago, though the trend was unfavourable.

A separate compilation is made each month of unemployment reported from the largest city in each province, with the exception of Prince Edward Island. Edmonton and Vancouver members were afforded a considerably better volume of work during June than in May, and advancement, on a smaller scale, was evident among Winnipeg, Regina and Toronto unions. In Montreal, Halifax and Saint John, however, employment eased off slightly from May. When contrasted with the returns for June of last year Edmonton unions, as in the previous comparison, reported extensive employment gains during the period surveyed and in Toronto the situation was also notably improved. Increased activity, of more moderate degree was apparent among Winnipeg, Regina and Vancouver unions, while in Montreal the tendency was nominally upward. Curtailment in employment on a large scale was, however, noted by Halifax members and in Saint John also much slacker conditions prevailed.

Appearing with this article is a chart which shows the trend of unemployment by months from January, 1929, to date. During January and February of this year unemployment as indicated by the curve remained in much the same volume as at the close of 1934, though the tendency was toward retarded activity. In March, the projection was downward, reflecting a somewhat improved industrial situation which, however, was not maintained in April, as the trend was slightly less favourable. During May and June there was again a lowering in the level of the curve, denoting employment advancement on a small scale. In each month during the first half of 1935, as represented by the curve, better conditions have prevailed than in the corresponding month of 1934.

The manufacturing industries during June reported the same percentage of idleness as in the previous month, namely, 15.9, the fluctuations in activity reported in the various trades being of an offsetting character. For June, reports were received from 465 unions in the manufacturing industries with 51,497 members, 8,186 of whom were idle on the last day of the month. A more favourable employment situation was noted from June a year ago when 17.2 per cent of the members reported were unemployed. The iron and steel trades, which combined include a rather substantial membership, showed stationary employment conditions when compared with May, as did also general labourers. Fur workers were much better engaged and moderate expansion was indicated by papermakers and wood, textile and carpet, and glass workers.

Increases in activity, on a smaller scale, were apparent among cigar makers, metal polishers, bakers and confectioners, brewery and leather workers. On the other hand, meat cutters and butchers reported a sharp drop in employment from May, recessions of much lesser magnitude occurring for garment and jewelry workers. Fractional declines only were registered in the printing trades, and among hat and cap workers. A much better level of activity was shown from June of last year by wood and fur workers, general labourers and metal polishers, and improvement of considerably lesser proportions by iron and steel workers, papermakers, printing tradesmen and brewery workers. On the contrary, pronounced curtailment was evident among cigar makers and glass, jewelry and leather workers, while declines in activity of moderate degree were registered by textile and carpet, garment and hat and cap workers and meat cutters and butchers.

Unemployment in the coal mines was in somewhat greater prevalence during June than in the preceding month, according to the reports tabulated from 50 unions embracing a membership of 16,093 persons. Of these, 3,020, or a percentage of 18.8, were without work at the end of the month, in contrast with 15.5 per cent in May. Heightened activity, however, was apparent from June of last year when 21.9 per cent of idleness was recorded. Mine closings in Nova Scotia were the deciding factor in the less favourable situation indicated from May, the British Columbia mines showing a substantial gain in work afforded and Alberta improvement of lesser degree. There was little variation in the employment volume afforded miners in Nova Scotia from June of last year, what nominal change was noted being in a favourable direction, while in Alberta and British Columbia gains in activity on a larger scale were recorded. Short time work among the miners continued to be rather prevalent during the month surveyed.

The substantial recovery noted in the building and construction trades during May was sustained throughout June and increased slightly, the 182 associations making returns, with a combined membership of 17,264 persons, showing an unemployment percentage of 44.5 at the close of the month, in contrast with 45.5 per cent in May. Considerably greater activity was apparent than in June last year, unemployment for that month standing at 57.8 per cent. Improvement on a pronounced scale from May was reflected by steam shovelmen, hod carriers and building labourers, and granite and stone cutters, while bricklayers, masons and plasterers showed moderate gains and electrical workers a slightly better em-

ployment trend. On the contrary, plumbers and steamfitters, and bridge and structural iron workers registered a substantial drop in work afforded from May, and employment for tile layers, lathers and roofers, painters, decorators and paperhangers, and carpenters and joiners was somewhat retarded. In all trades better conditions prevailed than in June, 1934, steam shovelmen, hod carriers and building labourers, tile layers, lathers and roofers, granite and stonecutters, carpenters and joiners, and bridge and structural iron workers all sharing extensively in the total advancement. The increases in employment recorded by bricklayers, masons and plasterers, electrical workers and painters, decorators and paperhangers were also noteworthy, plumbers and steamfitters showing lesser gains.

The transportation industries, with 746 organizations reporting a total of 54,002 members during June, indicated a better employment tendency than in the previous month, unemployment standing at 7.7 in comparison with a percentage of 9.0 in May. Heightened activity on a small scale was also noted from June last year, when 9.3 per cent of idleness was recorded. Navigation workers were much better engaged than in May and among steam railway employees, whose returns included over 77 per cent of the entire group membership reported, the level of activity was slightly above that of the preceding month. Teamsters and chauffeurs showed but a nominal increase in work available, while among street and electric railway employees conditions were unchanged from May. As in the previous comparison, expansion of noteworthy proportions was recorded by navigation workers from June, 1934, and slight gains by steam railway employees. Among street and electric railway employees fractional improvement only was registered. Teamsters and chauffeurs, however, reported a small percentage of idleness during June compared with a fully engaged situation in the corresponding month of last year.

Among retail shop clerks a higher level of employment was shown during June than in the preceding month, though inactivity was somewhat more marked than in June last year. This was manifest by the reports received from 5 associations, with an aggregate of 1,786 members, 184, or 10.3 per cent, of whom were without work on the last day of the month, in contrast with percentages of 13.3 in May and 6.2 in June a year ago.

Activity for civic employees eased off very slightly during June from May, the 77 associations forwarding reports, with 7,759 members, showing an unemployment percentage of 2.8, as compared with 1.9 per cent in May. The change from June, 1934, was also slight, though

favourable, 3.0 per cent of inactivity being reported for that month.

The situation in the miscellaneous group of trades during June tended upward, both when compared with that of the previous month and June, 1934, though the variation in each comparison was quite small. Reports for June were received from an aggregate of 115 unions, involving 4,115 members, 604 of whom were idle at the close of the month, a percentage of 14.7, as compared with percentages of

TABLE 1.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications declined steadily throughout June, and at the end of the period under review were about 15 points below the levels recorded at the close of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 56.6 during the first half and 51.7 during the second half of June, 1935, in comparison with ratios of 68.7 and 66.1 during the corresponding periods of 1934. The ratios of placements to each 100 applications during the same periods were 52.9 and 48.2 in comparison with 65.4 and 63.8, respectively.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1935, was 1,156 as compared with 1,234 in the preceding month and with 1,822 during June of last year.

The average number of applications for employment received daily by the offices during the month under review was 2,131 in comparison with 2,091 in May and 2,701 in June, 1934.

The average number of placements made daily by the offices of the Service during the month under review was 1,079, of which 654 were in regular employment and 425 in work of one week's duration or less, as compared with a total daily average of 1,147 during the preceding month. Placements in June, 1934, averaged 1,745 daily, consisting of 1,046 placements in regular and 699 in casual employment.

During the month of June, 1935, the offices of the Service referred 27,403 persons to positions and effected a total of 25,889 placements. Of these, the placements in regular employment numbered 15,695, of which 11,488 were of men and 4,207 of women, while placements in casual work totalled 10,194. The number of vacancies reported by employers was 18,951 for men and 8,770 for women, a total of 27,721, while applications for work totalled 51,129, of which 39,182 were from men and 11,947 from women. Reports for May, 1935, showed 30,847 positions available, 52,251 applications made and 28,672 placements effected, while in June, 1934, there were recorded 45,529 vacancies, 67,504 applications for work, and 43,621 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1925, to date:—

Year	Placements		
	Regular	Casual	Totals
1925.....	308,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097

1935 (6 months).....	92,530	62,172	154,702

#### NOVA SCOTIA

There was a decrease of nearly 23 per cent in the number of positions offered through employment offices in Nova Scotia during June when compared with the preceding month and of 12 per cent in comparison with the corresponding month of last year. Slightly higher percentages of loss were reported in placements under both comparisons. The reduction from June of last year was due to fewer workers being placed in the highway division of construction and maintenance and in services, as nominal changes only were reported in all other groups. Placements by industrial divisions included logging, 44; construction and maintenance, 588; and services, 252, of which 196 were of household workers. Placements in regular employment numbered 297 of men and 85 of women.

#### NEW BRUNSWICK

Employment opportunities, as indicated by orders received at employment offices in New Brunswick during June, were 4 per cent better than in the preceding month and nearly 12 per cent above the corresponding month of last year. There was a gain also in placements of over 4 per cent when compared with May, and nearly 13 per cent in comparison with June, 1934. The only gains of importance over June of last year were in the highway division of construction and maintenance and in services. These increases were offset, in part, by reduced placements in logging and transportation. Industrial divisions in which most of the placements were effected during the month were manufacturing, 29; construction and maintenance, 460; and services, 531, of which 415 were of household workers. During the month 475 men and 79 women were placed in regular employment.

#### QUEBEC

Positions offered through employment offices in the province of Quebec during June were nearly 8 per cent less than in the preceding month, but nearly 41 per cent above the corresponding month of last year. There was a decline of nearly 4 per cent in place-

\*504 Placements effected by offices since closed.

ments when compared with May, but a gain of nearly 54 per cent in comparison with June, 1934. Increased placements under construction and maintenance were mainly responsible for the gain over June of last year, although all groups, except farming and mining, showed improvement under this comparison. Placements by industrial divisions included manufacturing 69; logging 158; transportation 142; construction and maintenance 1,324; trade 119; and services 2,023, of which 1,785 were of household workers. Placements in regular employment numbered 1,727 of men and 1,438 of women.

#### ONTARIO

Positions offered through employment offices in Ontario during June were over 10 per cent less than in the preceding month and nearly 58 per cent below the corresponding month of last year. Placements also declined over 9 per cent when compared with May and nearly 59 per cent in comparison with June, 1934. The large reduction in placements from June of last year was almost entirely due to the curtailment of placements on highway construction and other relief projects, supplemented by losses in services, logging, manufacturing, transportation and mining. These declines were slightly offset by gains in farming and trade. Placements by industrial divisions included manufacturing 432; logging 1,140; farming 1,261; construction and maintenance 5,087; trade 334; and service 3,356, of which 2,135 were of household workers. There were 4,914 men and 1,448 women placed in regular employment during the month.

#### MANITOBA

There was a decline of nearly 35 per cent in the number of positions offered through employment offices in Manitoba during June, when compared with the preceding month and of nearly 42 per cent in comparison with the corresponding month of last year. Placements also were over 35 per cent less than in May and nearly 44 per cent lower than during June, 1934. The decline in placements from June of last year was due almost entirely to fewer workers being sent to relief work on highway construction, offset, in part, by a gain in building construction. All other groups showed losses, of which those in services and logging were the largest. Placements by industrial divisions included farming 300; construction and maintenance 399; and services 600, of which 460 were of household workers. There were 713 men and 288 women placed in regular employment during the month.

#### SASKATCHEWAN

The demand for workers, as indicated by orders received at employment offices in Saskatchewan during June, was nearly 29 per

cent less than in the preceding month and 10 per cent below the corresponding month of last year. Placements also declined over 34 per cent when compared with May and over 15 per cent in comparison with June, 1934. The only loss of importance from June of last year was in the highway division of construction and maintenance, while a small gain was reported in farm placements. The changes in other groups were nominal only. Placements by industrial divisions included manufacturing 55; farming 517; construction and maintenance 124; and services 644, of which 428 were of household workers. During the month 638 men and 298 women were placed in regular employment.

#### ALBERTA

Orders received at employment offices in Alberta during June called for over 17 per cent less workers than in the preceding month and over 3 per cent less than during the corresponding month of last year. Similar percentages of loss under both comparisons were reported in placements. When comparing placements by industrial groups with June of last year, construction and maintenance, farming and logging showed declines, and increases were reported in services, transportation, manufacturing, and mining. The total losses, however, were slightly in excess of the gains. Industrial divisions in which most of the placements were effected during the month were manufacturing 50; farming 488; transportation 52; construction and maintenance 1,091; and services 521, of which 374 were of household workers. Regular employment was found for 1,233 men and 317 women.

#### BRITISH COLUMBIA

During June, orders received at employment offices in British Columbia called for nearly 29 per cent more workers than in the preceding month, but nearly 22 per cent less than during the corresponding month of last year. There was a gain of over 28 per cent in placements when compared with May, but a loss of nearly 23 per cent in comparison with June, 1934. The decline in placements from June of last year was entirely due to fewer workers being sent to relief employment on highway construction. This loss was offset, in part, by moderate increases in logging, services and mining. Placements by industrial divisions included manufacturing 53; logging 107; farming 180; mining 63; construction and maintenance 2,207; and services 618, of which 352 were of household workers. During the month 1,491 men and 254 women were placed in regular employment.

#### Movement of Labour

During the month of June, 1935, the offices of the Employment Service of Canada made 15,695 placements in regular employment,

6,711 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 542 were granted the Employment Service reduced transportation rate, 515 going to points within the same province as the despatching office and 27 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4.00 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Benefiting by the reduced rate in Quebec during June were 6 loggers who received their certificates at the Hull office for transportation to Pembroke. Reduced rate certificates granted in Ontario during June numbered 278, of which 275 were to provincial points and 3 outside the province. The latter were issued at the Timmins office to 3 mine workers for transportation to Amos. Provincially for points within their respective zones the Port Arthur office despatched 185 bushmen, 11 sawmill workers, 8 mine workers, 5 café employees, and one iron worker; the Fort William office 50 bushmen and the Sudbury office 14 bushmen. To employment within the Fort William zone also one miner was despatched from Timmins. The movement of labour in Manitoba during June comprised the transfer of 62 workers, 44 of whom went to provincial employment and 18 to other provinces. All of these were granted their certificates for transportation at the Winnipeg office. Travelling within the province were 41 farm hands, 2 hotel workers, and one camp cook going to situations at centres within the Winnipeg zone. Of the workers journeying outside the province 10 bushmen, one farm hand, one cook, and one highway labourer were destined to the Port Arthur zone, 3 construction labourers

and one farm housekeeper to Regina, and one farm hand to Estevan. In Saskatchewan, one certificate was issued during June at the Regina office to a farm hand proceeding to Saskatoon. Business transacted by Alberta offices involved the transfer of 148 workers, all of whom were bound for provincial employment. The majority of these secured their certificates at Edmonton, among whom were one farm hand travelling to Drumheller, and 31 mine workers, 31 highway construction workers, 26 steamship company employees, 19 bushmen, 16 fishermen, 6 farm hands, 5 farm housekeepers, 3 hotel workers, 2 Dominion Parks employees, one baker, one electrician, one bridge carpenter, one camp cook, one electric welder, and one truck driver to various centres in the territory covered by the Edmonton office. Transferred from Calgary one hotel cook went to Edmonton, and one hotel maid within the Calgary zone. British Columbia offices issued 47 reduced rate certificates during June, all for provincial points. Of these 37 were granted at Vancouver to 17 mine workers, one farm hand and one construction labourer travelling to Penticton, 4 mine workers to Kamloops, one musician to Nelson, one sawyer to Prince Rupert, and to 9 miners, one housekeeper, one hotel worker and one cook going to employment within the Vancouver zone. For points within its own zone Prince Rupert despatched 8 mine workers and one farm hand. The one remaining transfer was of a sawmill engineer sent from Nelson to Penticton.

Of the 542 persons who profited by the Employment Service reduced transportation rate during June, 362 were carried by the Canadian National Railways, 151 by the Canadian Pacific Railway, 22 by the Northern Alberta Railway, 4 by the Temiskaming and Northern Ontario Railway, and 3 by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada During June, 1935

The value of the building permits issued by 61 cities during June was \$5,117,066; this was an increase of \$291,881 or six per cent, as compared with the May total of \$4,825,185,<sup>1</sup> and of \$2,705,606 or 112.2 per cent in the more significant comparison with June, 1934, when the authorization amounted to \$2,411,460.

The value of the building authorized in each month of the present year has been higher than in the same month of 1934, while since January, the aggregate for each month has also exceeded that for the corresponding month in 1933. The cumulative total for the

first six months of 1935 is higher than in any of the last three years. Although the improvement is partly due to the granting of construction permits for public buildings in several centres as an unemployment relief measure, the movement in general building operations has also been distinctly more favourable than in the last few years. In comparison with earlier years of the record, from 1920 to 1931, however, the value of building authorizations continues low. The index number of wholesale prices of building materials during the elapsed months of 1935, at 81.5 per cent of the 1926 basic average, was lower than in the same period of any

<sup>1</sup>Includes figures for Charlottetown and Fredericton, received too late for inclusion in the May report.

preceding year for which building statistics for the 61 cities are on record, with the exception of 1932 and 1931.

Some 50 cities furnished detailed statements for June, 1935, showing that they had issued more than 300 permits for dwellings valued at over \$1,241,000 and some 1,900 permits for other buildings estimated to cost approximately \$3,700,000, while engineering projects valued at an aggregate of \$23,000 were authorized in Brantford. During May, authority was given for the erection of almost 400 dwellings and some 2,300 other buildings, valued at approximately \$1,373,000 and \$3,260,000, respectively; engineering projects estimated at \$119,152 were also authorized.

Improvement over May, 1935, was recorded in Prince Edward Island, Ontario, Manitoba, Alberta, and British Columbia, the gain of \$278,842 or 90·8 per cent in British Columbia being greatest. Of the declines elsewhere reported, those of \$190,751 or 11·3 per cent in Quebec and \$103,505 or 72·6 per cent in Saskatchewan were most pronounced.

As compared with June, 1934, there were increases in Prince Edward Island, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia; the gain of \$1,008,847 or 75·8 per cent in Ontario and \$1,004,953 or 204·2 per cent in Quebec were largest. In Nova Scotia and New Brunswick there were decreases of \$36,655 and \$25,881, respectively, in this comparison.

Of the larger cities, Montreal, Winnipeg, and Vancouver recorded increases in the value of the permits issued as compared with May, 1935, and also with June, 1934; Toronto showed a loss in the first, but a gain in the second comparison. Of the other centres, Charlottetown, Brantford, Fort William, Galt, Guelph, London, Oshawa, Owen Sound, Peterborough, Stratford, St. Catharines, St. Thomas, York, and East York townships, East Windsor, Riverside, Regina, Calgary, Kamloops, and New Westminster also reported improvement over May, 1935, and June, 1934.

*Cumulative Record for First Half Year, 1920-1935.*—The following table gives the value of the building authorized by 61 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first six months of the same years are also given.

The aggregate for the first six months of this year was decidedly higher than in any of the last three years, although it was lower than in earlier years of the record; the cost of building, as indicated by the index number of wholesale prices of building materials, was

slightly lower than in the first half of 1934, and was also lower than in other years since 1920, except 1933 and 1932.

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued in first six months (1926 = 100)	Average indexes of wholesale prices of building materials in first six months (1926 ave. = 100)
1935.....	\$ 5,117,066	\$24,629,071	31·3	81·5
1934.....	2,441,460	10,411,377	13·2	82·8
1933.....	3,589,204	10,315,899	13·1	78·9
1932.....	5,028,324	24,341,044	30·9	76·8
1931.....	8,593,958	58,950,508	74·8	83·5
1930.....	18,621,487	85,413,985	108·4	95·0
1929.....	27,816,592	124,609,267	158·2	99·2
1928.....	22,751,960	102,036,987	129·6	95·9
1927.....	18,363,239	80,842,719	102·6	96·0
1926.....	18,715,050	73,760,419	100·0	101·0
1925.....	14,915,884	65,899,717	83·7	103·1
1924.....	13,967,006	60,674,154	77·0	110·8
1923.....	14,286,252	73,047,496	92·7	111·4
1922.....	17,052,582	71,281,674	90·5	108·0
1921.....	14,420,934	55,771,684	70·7	132·0
1920.....	14,113,794	61,754,710	78·4	144·5

The relation between illumination and industrial efficiency has been made a subject of study by the Medical Research Council and the Department of Scientific and Industrial Research of Great Britain. In a report recently published by this department it is stated:

"The illumination required for any kind of task depends upon certain qualities or conditions of the object or objects with which the task is concerned; and these vary with different types of tasks. The chief of these are size, contrast, rate of movement and, possibly, colour. The idea which is aimed at is, in effect, to endeavour to take the task to pieces, assess its component parts and put it together again in terms of the illumination required for its performance.

"So far one variant only has been examined. The present paper sets out the result of the examination of the relationship between size and illumination. It is shown that actually it is impossible by any practicable increase in illumination to compensate for a considerable decrease in size, so as to bring the rate of performance up to the value which it had for the largest sizes, but, on the other hand, a very definite relationship has been established for each size between performance and illumination. It is clear from the results obtained that it is now possible to find the relationship between size of work and illumination which will give a performance equal to a certain definite percentage of the maximum performance for the size under consideration."

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

**T**HE British *Ministry of Labour Gazette*, July, 1935, summarized the employment situation as follows:—

There was a further improvement in employment between May 20 and June 24, in most of the principal industries. The estimated number of insured persons in employment increased by 27,000.

The industries mainly affected by the improvement were building, public works and contracting and certain ancillary trades, engineering and ironfounding, shipbuilding and ship-repairing, iron and steel and tinplate manufacture, the hosiery and jute industries, certain food manufacturing industries, printing and bookbinding, musical instrument, etc., manufacture, the transport and distributive trades, and hotel, boarding house, etc., service. There was a further increase, however, in the numbers temporarily stopped in the coal mining industry, mainly in Yorkshire, and there was also a decline in employment in most of the clothing trades, including boot and shoe manufacture, and in the motor vehicle industry.

Among those workpeople of ages 16-64 who were insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at June 24, 1935 (including those temporarily stopped as well as those wholly unemployed), was 15.5, as compared with 15.6 at May 20, 1935, and with 16.4 at June 25, 1934. The percentage wholly unemployed at June 24, 1935, was 12.6 as compared with 13.1 at May 20, 1935; while the percentage temporarily stopped was 2.9, as compared with 2.5. For males alone the percentage at June 24, 1935, was 17.8 and for females, 9.2; at May 20, 1935, the corresponding percentages were 17.9 and 9.5.

The estimated number of insured persons aged 16-64, in employment in Great Britain at June 24, was 10,361,000. This is the highest figure recorded during the period of over fourteen years for which statistics are available. The total was 27,000 more than at May 20, 1935, and 188,000 more than at June 25, 1934.

At June 24, 1935, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,555,184 wholly unemployed, 361,825 temporarily stopped, and 83,101 normally in casual employment, making a total of 2,000,110. This was 44,642 less than a month before, and 92,476 less than a year before. The total included 1,615,081 men, 55,647 boys, 283,308 woman, and 46,074 girls.

The persons on the Registers included 920,179 persons with claims for insurance benefit; 744,258 insured persons with applications for unemployment allowances; 210,863 insured persons (including 19,255 insured juveniles under 16 years of age), not in receipt of insurance benefit or unemployment allowances, and 124,810 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at June 24, 1935, was 2,068,152.

### United States

**Manufacturing Industries.**—Factory employment decreased 1.7 per cent and pay rolls declined 2.9 per cent from May to June. Seasonal factors partly accounted for these declines. Factory employment and pay rolls normally decline in June, decreases having been shown in that month in 9 of the preceding 16 years for which information is available. While strikes in the sawmill industry in the Pacific Northwest States, together with sporadic strikes in other localities, further depressed the level of employment in June, the effect of these labour disturbances were counteracted to some extent by the settlement of labour difficulties in brick and other industries.

Declines in employment and pay rolls were shown in both the durable and nondurable goods groups of industries. The decreases were more pronounced in the durable goods group, employment decreasing 2.2 per cent and pay rolls 3.8 per cent. In the nondurable goods group the declines were 1.3 per cent and 1.9 per cent, respectively.

A comparison of the preliminary June 1935 employment index (79.7) with June 1934 (81.1) shows a decrease of 1.7 per cent in employment over the year interval while a similar comparison of the June 1935 pay-roll index (66.5) with June 1934 (64.9) shows a gain of 2.5 per cent.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In June 1935, reports were received from 23,127 establishments employing 3,580,749 workers whose weekly earnings were \$73,054,592. The employment reports received from these co-operating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country and more than 60 per cent of the wage earners in the 90 industries studied.

**Non-manufacturing Industries.**—Fourteen of the 17 non-manufacturing industries surveyed monthly by the Bureau of Labour Statistics showed gains in employment and pay rolls from May to June. The only industries in which declines in employment were reported were wholesale and retail trade and year-round hotels.

**WHOLESALE AND RETAIL TRADE.**—Employment in retail trade and wholesale trade establishments declined slightly from May to June, though aggregate pay rolls in retail trade increased 0.6 per cent.

The decrease of 0.1 per cent in employment in retail trade was due largely to declines in the general merchandising group of establishments. In this group, composed of department, variety, general merchandising, and mail-order houses, employment decreased 0.8 per cent. Food stores also showed a small decline in number of workers over the month interval. Increases in employment were shown for automotive, apparel, and lumber and building materials retailers.

Employment in wholesale trade establishments declined 0.5 per cent from May to June, based on reports received from 16,464 establishments employing 281,755 workers in June. The net decrease in employment was due primarily to sharp declines in the group of country buyers and assemblers. The wholesale dry goods and apparel group showed a small decrease in number of workers while several other important lines of trade (food, groceries, machinery, and hardware) reported small gains.

**PUBLIC UTILITIES.**—Small gains in employment were shown in each of the 3 public utility industries surveyed. Employment increased 0.7 per cent in the electric light and power manufactured gas industry, 0.3 per cent in telephone and telegraph, and 0.2 per cent in electric railroad and motor bus operation and maintenance.

**SERVICE INDUSTRIES.**—Increases in employment were shown in 5 of the 6 service industries surveyed. Employment in laundries and dyeing and cleaning establishments showed seasonal gains of 1.5 per cent and 3.3 per cent, respectively. Brokerage firms showed 1.3 per cent more employees in June than in May and banks and insurance companies reported small gains in the number of workers. Employment in hotels which operate on a year-round basis showed a decrease of 0.4 per cent. In resort hotels, which are not included in these totals, a seasonal expansion in employment was reported.

**MINING.**—Each of the 5 mining industries showed gains in number of employees from May to June. Anthracite mines reported a gain of 6 per cent in employment coupled with a gain of 33.2 per cent in pay rolls, reflecting increased production. A similar condition was shown in bituminous coal mining in which the gain of 3.4 per cent in number of workers was coupled with a gain of 31.8 per cent in pay rolls. Employment in metal mining increased 3.5 per cent, due partially to resumption of operation following strikes in certain localities; quarrying and nonmetallic mining plants showed a gain of 1.8 per cent and crude petroleum producing firms reported an increase of 0.6 per cent in employment over the month interval.

**BUILDING CONSTRUCTION.**—Employment in building construction continued to expand in June. Reports from 10,219 contractors engaged on private building construction projects not financed by P.W.A. funds showed an increase of 4.6 per cent in employment and 6.2 per cent in pay rolls. The reporting contractors employed 88,732 workers in June whose weekly earnings during the pay period ending nearest June 15 were \$2,137,714. Gains were generally shown in all localities for which data are available.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain

conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original

form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates than fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wage Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wage scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924 provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district, or fair and reasonable hours. These "A" conditions, in so far as wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the *LABOUR GAZETTE* of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour

schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the workpeople employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and

payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "B" (Manufacture of Supplies, Interior Fittings, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of July, 1935, for various classes of manufactured goods, which contracts include in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Enamelware.....	General Steel Wares Ltd., Montreal, P.Q.
Socks.....	Brampton Knitting Mills, Brampton, Ont.
Boots.....	Tebbutt Shoe & Leather Co., Ltd., Three Rivers, P.Q.
Greatcoats.....	Workman Uniform Co., Mont- real, P.Q.
Cloaks.....	Workman Uniform Co., Mont- real, P.Q.
Ankle boots.....	Tebbutt Shoe & Leather Co., Ltd., Three Rivers, P.Q.

Goods contracted for	Contractor
Collars, vests and overcoats..	Clayton & Sons, Halifax, N.S.
Blue overall suits.....	Clayton & Sons, Halifax, N.S.
Linoleum, base, etc.....	Dominion Oilcloth & Linoleum Co., Ltd., Montreal, P.Q.
Forage caps, drab.....	Hamilton Uniform Cap Co., Hamilton, Ont.
Service shirts.....	The Canadian Converters Co., Ltd., Montreal, P.Q.
Overcoats.....	I. H. Herman, Victoria, B.C.
Cotton canvas.....	J. Spencer Turner Co., Ltd., Hamilton, Ont.
Service trousers.....	The Canadian Converters Co., Ltd., Montreal, P.Q.
Cloth trousers.....	Houde Larocche & Cie, St. Croix, P.Q.
No. 1 drill.....	Montreal Cottons, Ltd., Mont- real, P.Q.
Serge lining.....	Paton Mfg. Co., Ltd., Mont- real, P.Q.
Sheets.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Canopy Hangar doors.....	Richards Wilcox Canadian Co., London, Ont.
Peak caps, summer.....	Hamilton Uniform Cap Co., Ltd., Hamilton, Ont.
Drab frieze.....	Bates & Innes, Ltd., Carleton Place, Ont.
Blue frieze.....	Bates & Innes Ltd., Carleton Place, Ont.
Enamelware.....	General Steel Wares Ltd., Montreal, P.Q.
Shirts and trousers.....	Gault Bros., Ltd., Vancouver, B.C.
Earthenware.....	Sovereign Potters Ltd., Ham- ilton, Ont.
Blankets.....	Porritt's Spencer (Canada) Ltd., Hamilton, Ont.
Blankets.....	Horn Bros. Woollen Co., Ltd., Lindsay, Ont.
Blankets.....	Watchorn & Co., Ltd., Merrick- ville, Ont.
Blankets.....	West Coast Woollen Mills Ltd., Vancouver, B.C.
Winter shirts and drawers....	Galt Knitting Co., Ltd., Galt, Ont.
Winter shirts and drawers....	Jos. Simpson Sons Ltd., Tor- onto, Ont.
Leather mitts.....	Duclos & Valliere Ltd., Mont- real, P.Q.
Blue serge.....	Paton Mfg. Co., Montreal, P.Q.
Marquee tents.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Khaki drill.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Drawers, lightweight.....	Joseph Simpson Sons Ltd., Toronto, Ont.
Drawers, lightweight.....	Schofield Woollen Mills Ltd., Oshawa, Ont.
Toilet soap.....	Royal Crown Soaps Ltd., Cal- gary, Alta.
Steel sash.....	Geo. W. Reed Co., Ltd., Mont- real, P.Q.
Ankle boots.....	J. Leckie Co., Ltd., Vancouver, B.C.
Ankle boots.....	A. E. Wry Standard Ltd., Am- herst, N.S.
Ankle boots.....	J. A. & M. Cote Ltd., St. Hyacinthe, P.Q.
Peak winter caps.....	Ottawa Imperial Cap Co., Ottawa, Ont.
Mackinaw coats.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Table oilcloth.....	Dominion Oilcloth & Linoleum Co., Ltd., Montreal, P.Q.
Household soap.....	Colgate Palmolive Peet Co., Toronto, Ont.
Bed springs.....	Simmons Ltd., Vancouver, B.C.

#### POST OFFICE DEPARTMENT

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Post Office Department during

the month of July, 1935, for various classes of manufactured supplies, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Metal dating stamps and type, brass crown seals, cancellers, etc.....	Pritchard-Andrews Co. Ltd.,
Letter carriers' uniforms.....	Uniform Cap Co., Ottawa, Ont.
Letter carriers' uniforms.....	Yamaska Garments Ltd., St. Hyacinthe, P.Q.
Letter carriers' uniforms.....	J. R. Shuttleworth & Sons, Ltd., London, Ont.
Letter carriers' uniforms.....	Needlecraft Mills Ltd., St. Hyacinthe, P.Q.
Letter carriers' uniforms.....	Miner Rubber Co., Ltd., Granby, P.Q.
Letter carriers' uniforms.....	Tayside Textiles Ltd., Perth, Ont.
Mail bag fittings.....	F. W. Carling, Ottawa, Ont.
Mail bag fittings.....	Chas. A. Duff, Montreal, P.Q.
Stamping machines, etc.....	Machine Works, Ltd., Montreal, P.Q.
Letter box locks.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Scales.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Making and repairing rubber stamps, daters, etc.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Construction of a Museum and Caretaker's Quarters at Port Louisburg, N.S. Name of contractors, Messrs. M. A. Condon & Son, Kentville, N.S. Date of contract, June 24, 1935. Amount of contract, \$42,842.00 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 40	8
Cement finishers.....	0 50	8
Stonemasons.....	0 70	8
Stone carvers.....	0 70	8
Stone cutters.....	0 60	8
Brick and hollow tile layers.....	0 70	8
Structural steel workers.....	0 65	8
Ornamental iron and bronze workers.....	0 50	8
Carpenters and joiners.....	0 55	8
Sheet metal workers.....	0 55	8
Roofers, asbestos shingles.....	0 55	8
Insulation workers.....	0 50	8
Marble and tile setters.....	0 70	8
Lathers, metal.....	0 50	8
Plasterers.....	0 70	8
Plasterers' helpers.....	0 35	8
Painters and glaziers.....	0 50	8
Plumbers and steamfitters.....	0 55	8
Electricians.....	0 55	8
Labourers.....	0 30	8
Driver, team and wagon.....	0 55	8
Motor truck driver.....	0 35	8

#### ROYAL CANADIAN MOUNTED POLICE

#### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

Contracts were awarded recently by the Royal Canadian Mounted Police, under the "B" Labour Conditions, as follows: to The Workman Uniform Co., Ltd., Montreal, P.Q., for the supply of brown serge jackets; to the Paris Wincey Mills Co., Ltd., Paris, Ont., for the supply of flannel; to Dufresne & Locke Ltd., Montreal, P.Q., for black ankle boots; and to The Hartt Boot & Shoe Co., Ltd., Fredericton, N.B., for Strathcona riding boots.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule the rates of wages for the principal classes of labour are given, with other information of general interest.

### Logging

#### NIPIGON DISTRICT, ONTARIO.—CERTAIN TIMBER OPERATORS AND THEIR EMPLOYEES

Agreement reached following the strike reported on page 725 of this issue, to be in effect from July 18, 1935, for the "sap peeling season" of 1935.

Workers to have the right to belong to a union of their own choice and no discrimination against workers on account of union activity. Union representatives may discuss business with the men without interference during working hours. Appointed representatives of the workers to have the right to discuss grievances with the foremen or other representatives of the operators. Workmen to have the right to subscribe voluntarily to any

organization and upon the worker's instructions, the operators will pay such subscriptions and charge same to worker's account.

Price for cutting and peeling spruce is \$3.25 per single cord to apply in good timber and an adjustment to be made in the various camps to compensate men for working in poor timber (\$3.50 per cord at Long Lac). The monthly rate during the "sap peeling season," \$40 per month ordinary work and \$45 for teamsters based on a 9-hour day. This is exclusive of the kitchen staff.

Van goods and other supplies required by workers to be furnished at prices not exceeding the retail prices charged for the same articles at Port Arthur and Fort William.

### Construction: Buildings and Structures

OTTAWA, ONTARIO.—OTTAWA MASTER PLUMBERS' ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 71.

Agreement to be in effect from August 1, 1935 to May 31, 1936, and thereafter from year to year until notice.

Only union members to be employed, if available.

Hours: 8 per day, 5 days per week, a 40-hour week. Men required for emergency work, the setting of sleeves and inserts on Saturday morning may be paid at single time. In case of night work only on a job, or shift work, shifts to commence at the end of the regular working day and 8 hours' pay for 7 hours' work.

Overtime: time and one half; Saturdays (with exception noted above), Sundays and eight statutory holidays, double time. If finishing up a repair job on regular working days, if to finish takes not more than one hour, single time to be paid.

Wages per hour: journeymen plumbers and steamfitters 75 cents until December 31, 1935 and 80 cents thereafter; until December 31, 1935, improvers to be paid 45 cents for their first six months and 60 cents for their second six months; from January 1, 1936, 50 cents for their first six months and 65 cents for their second six months.

Apprentices to be employed in accordance with the Ontario Provincial Apprenticeship Act.

One junior mechanic only on any job to each branch of the trade, except when there are more than five journeymen plumbers or five journeymen steamfitters when two to be allowed to six men, three to eleven men and four to sixteen men.

Men working out of city to have fare and board and travelling time up to a certain hour.

A joint conference board to be formed to adjust trade disputes or grievances. Any dispute which cannot be settled by this board will be referred to the general office of the union for a decision before any strike or lock-out occurs.

TORONTO, ONTARIO.—TORONTO AND DISTRICT SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 46.

(The terms of this agreement relating to wages and hours were approved by Order in Council under the Industrial Standards Act and noted in the LABOUR GAZETTE, July page 633.)

Agreement to be in effect from April 30, 1935, to February 28, 1936, and thereafter from year to year until notice.

This agreement is similar to the one summarized above for plumbers at Ottawa, with the following exceptions:

Minimum wages for journeymen plumbers and steamfitters: 85 cents per hour until June 30, 1935 and thereafter 90 cents, but all work contracted for and accepted prior to July 1, 1935, of which due notice has been given to the union, may be completed at the 85 cent rate. The minimum wage for 5th year junior mechanics 55 cents per hour until July 1, 1935, and 60 cents thereafter.

For work out of the city, the board of those journeymen only who are sent in charge of work or as foreman or superintendent must be paid by the employer, but all journeymen are to have their transportation and certain travelling time paid by the employer.

LONDON, ONTARIO.—LONDON AND DISTRICT SOCIETY OF DOMESTIC SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 593.

Agreement to be in effect from June 1, 1935, to May 1, 1936, and thereafter from year to year until notice.

This agreement is similar to the agreement summarized above for Toronto plumbers, with the following exception:

Minimum wage rates: journeymen plumbers and steamfitters 80 cents per hour, junior mechanics 55 cents.

### Quebec Labour Agreements Extension Act

The following agreements in the Province of Quebec, not previously mentioned in this monthly article, have been made obligatory by Orders in Council and the terms so made obligatory summarized in the LABOUR GAZETTE as follows:

BUILDING TRADES, VICTORIAVILLE, July, page 629, with amendment in this issue, page 733.

PLUMBERS, HULL, July, page 629.

BREAD AND CAKE DELIVERY MEN, QUEBEC, July, page 629.

PLUMBERS AND ELECTRICIANS, QUEBEC, July, page 630, with amendment in this issue, page 732.

BARBERS AND HAIRDRESSERS, SHERBROOKE, July, page 630.

BARBERS AND HAIRDRESSERS, MONTREAL, July, page 630.

BARBERS AND HAIRDRESSERS, SAINT HYACINTHE, July, page 631.

BARBERS AND HAIRDRESSERS, QUEBEC, July, page 631.

BARBERS AND HAIRDRESSERS, THREE RIVERS, July, page 631.

BUILDING TRADES, DRUMMONDVILLE, July, page 632.

LONGSHOREMEN (INLAND NAVIGATION) MONTREAL, July, page 632 and amendment in this issue, page 733.

PLUMBERS, THREE RIVERS (amendments) July, page 632, and this issue, page 733.

BAKERS, MONTREAL, this issue, page 731.

BARBERS AND HAIRDRESSERS, HULL, this issue, page 731.

BARBERS AND HAIRDRESSERS, JOLIETTE, this issue, page 731.

BARBERS AND HAIRDRESSERS, SHAWINIGAN FALLS, this issue, page 732.

MILLINERY WORKERS, MONTREAL, this issue, page 732.

BUILDING TRADES, THREE RIVERS (amendment) this issue, page 732.

PAINTERS, THREE RIVERS (amendment) this issue, page 733.

CLOTHING WORKERS, PROVINCE OF QUEBEC (amendment) this issue, page 733.

BRICKLAYERS AND PLASTERERS, THREE RIVERS (amendment) this issue, page 733.

BUILDING TRADES, THREE RIVERS (amendment) this issue, page 732.

### Industrial Standards Act of Ontario

The following schedules in the Province of Ontario have been made binding by Order in Council and the terms summarized in the LABOUR GAZETTE as follows:

PLUMBERS, TORONTO, July, page 633.

PLASTERERS, TORONTO, July, page 633.

BREWERS, PROVINCE OF ONTARIO, July, page 633.

ELECTRICIANS, TORONTO, this issue, page 734.

BUILDING LABOURERS, TORONTO, this issue, page 734.

BRICKLAYERS AND STONEMASONS, TORONTO, this issue, page 734.

PAINTERS, DECORATORS, PAPERHANGERS AND GLAZIERS, TORONTO, this issue, page 735.

LATHERS, TORONTO, this issue, page 735.

PLASTERERS' LABOURERS, TORONTO, this issue, page 735.

CARPENTERS, TORONTO, this issue, page 735.

SHEET METAL WORKERS, TORONTO, this issue, page 736.

MILLINERY WORKERS, PROVINCE OF ONTARIO, this issue, page 736.

FURNITURE WORKERS, PROVINCE OF ONTARIO (Except Toronto), this issue, page 736.

Seventeen thousand of Montreal's population have been dealt with in the past five years by the Health Service for Federated Agencies, which has given complete physical examinations with laboratory tests, dental examinations and treatment, physicians' visits to homes of clients for whom the Federation assumes financial responsibility.

The results of the first five years of the Health Service are given by Miss Esther Beith, R.N., executive director. During this period of five years the cost of this service has been \$82,619, or less than five dollars for each individual. The object of the Health Service is to provide health examinations for all clients of agencies within the Federation who are not in a position to have their own physician. It was felt that a great many conditions which required expenditures of large sums of money by the social agencies were caused by preventable health conditions.

In France a decree has been issued entitling French employers to a subsidy provided they give employment to persons registered with the regular unemployment funds. The decree stipulates that the employer must prove that the total number of persons employed by him exceeds the average number employed in the same period in the preceding year and in the quarter of the year immediately preceding the engagement of the unemployed persons. The hours of work of persons thus employed must not be less than 32 per week, and an employer may not collect a bonus for any one employee for more than 180 days in any 12-month period.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1935

### Cost of Living, Prices of Staple Articles, and Index Numbers

**T**HE movement in prices during the month was slight, both the cost of the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being at practically the same levels as in June.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.53 at the beginning of July as compared with \$7.54 for June; \$7.43 for July, 1934; \$6.67 for March, 1933 (the low point in recent years); \$10.91 for July, 1930; \$10.96 for July, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.42 for July, 1914. Changes in the cost of individual commodities were slight, the most important advances being in beef, pork and eggs and the largest declines in butter, flour and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$15.94 for July as compared with \$15.95 for June; \$15.84 for July, 1934; \$15.41 for June, 1933 (the low point in recent years); \$21.26 for July, 1930; \$21.53 for July, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.17 for July, 1914. Fuel was little changed, increases in the cost of anthracite coal being offset by the lower cost of wood. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was unchanged in July from the level of the previous month at 71.5. Comparative figures for certain previous dates are 72.0 for July, 1934; 63.5 for February, 1933 (the low point in recent years); 97.2 for July, 1929; 100.1 for July, 1926; 104.8 for July, 1921; 164.3 for May, 1920 (the post war peak); and 64.4 for July, 1914. Price changes during the month were not large, the greatest advances occurring in fruits, vegetables and raw textiles, chiefly cotton, silk and wool, while grains, livestock, hides, silver and raw rubber were lower. Consumers' goods were higher due to increases in prices of foods, while producers' goods were slightly lower mainly because of lower prices for manufacturers' materials.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every

effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

#### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage  
(Continued on Page 786.)

## COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing 18½%; Sundries, 20%.

(Continued from Page 778.)

changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of

each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

## Retail Prices

Beef prices continued to slightly higher levels in July, increases occurring mainly in the Maritime provinces and in Quebec. Sirloin steak averaged 25.3 cents per pound as compared with 24.8 cents in June and 20 cents in January. Mutton was down in the average from 21.7 cents per pound to 21.4 cents. Pork prices were again higher in most localities, fresh being up from an average of 21.3 cents per pound in June to 22.5 cents in July and salt pork from 19.6 cents per pound to 20.1 cents.

Egg prices were generally higher, fresh being up from 22.6 cents per dozen in June to 24.7 cents in July and cooking from 19 cents per dozen to 21.2 cents. Prices were considerably lower in the prairie provinces than in other parts of the Dominion. Dairy butter was down from an average price of 23.3 cents per pound in June to 21.4 cents in July and creamery from 26.3 cents per pound to 24.8 cents.

Flour was fractionally lower at an average price of 3.3 cents per pound. Potatoes were little changed averaging 76.3 cents per ninety pounds. Prices in the western provinces were much higher than in the east. Granulated sugar has changed little in price during the last year, averaging about 6.5 cents per pound. Anthracite coal averaged slightly higher in July, seasonal increases in price having been reported from several localities.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$14; Windsor, \$16.50; Charlottetown, \$12.90; Moncton, \$16; Saint John, \$13.50; Quebec, \$13.50; Sherbrooke, \$16.25; St. Hyacinthe, \$13.25; Montreal, \$13.75; Ottawa, \$15.25; Kingston, \$14.50; Belleville, \$15.50; Peterborough, \$15.75; Oshawa, \$14.25; Toronto, \$14.50; St. Catharines, \$14.50; Hamilton, \$13.50; Galt, \$16.50; Windsor, \$12.50; Sudbury, \$17.50; Cobalt \$19; Timmins, \$19.50; Port Arthur, \$16; Fort William, \$16; Winnipeg, \$19.50.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged slightly lower at 81.4 cents per bushel as compared with 81.7 cents in June and 82 cents in July, 1934. Prices declined at the

\*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

beginning of the month but later advanced somewhat when unfavourable crop conditions developed in North America and the Argentine. In coarse grains the price of oats advanced from 39.8 cents per bushel in June to 42.9 cents in July, while rye and barley declined, the former from 41.2 cents per bushel to 36.1 cents and the latter from 39.2 cents to 35.5 cents. In milled products the price of flour at Montreal was up 20 cents per barrel to \$5.10 and of rolled oats at Toronto from \$2.85 per 90 pound bag to \$3.05. Ceylon rubber at New York was  $\frac{1}{2}$  cent per pound lower at 12.1 cents per pound. Granulated sugar at Montreal was unchanged at \$4.90 per hundred pounds. Supplies of livestock at the yards were greater than requirements and prices declined, choice steers at Toronto being down from \$6.76 per hundred pounds to \$6.40, lambs from \$9.22 per hundred

pounds to \$8.37 and bacon hogs from \$9.92 per hundred pounds to \$9.66. Creamery butter at Montreal was fractionally lower at 21.9 cents per pound. Cold storage holdings on July 1st were about 10 per cent less than a year ago. Storage holdings of eggs at the beginning of July were 29 per cent higher than at June 1st but 40 per cent lower than a year ago. The price of fresh eggs at Montreal was up from 24.4 cents per dozen in June to 26.8 cents in July and in Winnipeg from 20.8 cents per dozen to 24 cents. Raw cotton at New York advanced in price from 11.9 cents per pound to 12.3 cents. Raw wool advanced 1.5—3.5 cents per pound, the price for July ranging from 16.5 cents per pound to 18.5 cents according to grade. In non-ferrous metals the price of copper was slightly higher, while silver was  $3\frac{1}{2}$  cents per ounce lower.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the July issue of the *LABOUR GAZETTE*.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1930=100, was 88·4 for June, an advance of 0·2 per cent for the month, due chiefly to higher prices for some foods, chiefly potatoes and imported butter. Industrial materials were practically unchanged for the month.

The *Statist* index number, on the base 1867-1877=100, was 83·7 at the end of June, a decrease of 1·8 per cent for the month. This decrease was general, extending to all groups with the exception of a slight advance in the textiles group.

**COST OF LIVING.**—The Ministry of Labour index number, on the base July 1914=100, was 143 at July 1, an increase of 2·15 per cent for the month, due entirely to higher food prices. All other groups were unchanged except for a slight decrease in the fuel and light group.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office on the base 1914=100, was 70 for June, a decrease of 2·8 per cent for the month. The downward movement included every group except miscellaneous industrial materials which were unchanged.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 101·2 for June, an increase of 0·4 per cent for the month, due principally to advances in the prices of agricultural products and colonial products. Industrial materials were practically unchanged.

**COST OF LIVING.**—The official index number, on the base 1913=100, was 123·0 for June, an increase of 0·2 per cent for the month.

Small increases in the food and clothing groups were partly offset by a slight decrease in the heat and light group.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Provincial Council of Corporate Economy, on the base 1913=100, was 304·38 for May, an increase of 1·9 per cent for the month, due to considerable advances in all the industrial materials groups except the construction materials group which was unchanged.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 79·8 for June, a decline of 0·5 per cent from the previous month. This downward trend was due to lower prices for farm products and foods, although smaller increases were also recorded for chemicals and drugs, house furnishing goods and miscellaneous commodities. On the other hand, advances were recorded in hides and leather products, textile products, fuel and lighting materials, metals and metal products and building materials.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is the sum total of the prices per pound of 96 commodities of common consumption was \$9·8416 at July 1, a decline of 0·7 per cent for the month. Fruits, textiles and coal and coke were higher, chemicals and drugs unchanged, while the other nine groups were lower than the June 1 level.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the cost *per capita* of a year's supply of commodities was \$171·046 at July 1, which is 1·7 per cent lower than the previous month. Decreases in meat, dairy and garden produce, "other food" and metals were partly offset by advances in breadstuffs, clothing and miscellaneous commodities.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 137·0 for June, a decrease of 0·6 per cent for the month, due to lower food and clothing prices, although the fuel and light group was slightly higher.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1935

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the second quarter of 1935, was 212, there being 78 in April, 65 in May and 69 in June.

The report for the first quarter of 1935, showing 202 fatalities, was given in the LABOUR GAZETTE, May, 1935, page 475. In the second quarter of 1934, 224 fatal accidents were recorded (LABOUR GAZETTE, August, 1934, page 799). The supplementary lists of accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contains 20 fatalities for the first quarter of 1935, and 7 fatalities for 1934.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the second quarter of 1935 were as follows: agriculture, 33; logging, 32; fishing and trapping, 7; mining, non-ferrous smelting and quarrying, 31; manufacturing, 25; construction, 16; electric light and power, 4; transportation and public utilities, 37; trade, 6; service, 21.

Of the mining accidents, 16 were in "metal-liferous mining," 14 in "coal mining," and 1 in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, 1 was in "vegetable foods, drink and tobacco," 1 in "leather, fur and products," 13 in "saw and planing mill products," 1 in "pulp, paper and paper products," 5 in "iron, steel and products," 1 in "non-ferrous metal products," and 3 in "non-metallic mineral products."

In construction there were 9 fatalities in "buildings and structures," 4 in "highway and bridge," and 3 in "miscellaneous construction."

In transportation and public utilities, there were 18 fatalities in "steam railways," 2 in "street and electric railways," 12 in "water transportation," 4 in "local transportation," and 1 in "storage."

In trade there were 2 fatalities in "wholesale," and 4 in "retail."

### FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1935 BY GROUPS OF INDUSTRIES AND CAUSES

CAUSE	Agriculture	Logging	Fishing and Trapping	Mining, Non-ferrous Smelting and Quarrying	Manufacturing	Construction	Electric Light and Power	Transportation and Public Utilities	Trade	Finance	Service	Unclassified	Total
A.—Prime movers (engines, shafting, belts, etc.).....				1	4	1							5
B.—Working machines.....	2			1	1	1		1					6
C.—Hoisting apparatus (elevators, conveyors, etc.).....					2								2
D.—Dangerous substances (steam, electricity, flames, explosions, etc.).....	7	1	1	7	4	1	1				7		31
E.—Striking against or being struck by objects.....		4			3			1	1				9
F.—Falling objects.....	2	6		15	2	2					3		30
G.—Handling of objects.....		4						2					6
H.—Tools.....				1									1
I.—Moving trains, vehicles, watercraft, etc.....	8	11	4	2	3	2	1	25	2		6		64
J.—Animals.....	10										3		13
K.—Falls of persons.....	3	6	2	3	1	7	2	7	1		1		33
L.—Other causes (industrial diseases, infections, lightning, cave-ins, etc.).....	1			2	5	2			1		1		12
Total.....	33	32	7	31	25	16	4	37	6		21		212

Of the fatalities in service, 14 were in "public administration," 3 in "recreational," 1 in "custom and repair," and 3 in "personal, domestic and business."

The most serious accident occurring during the period under review was in coal mining, when seven miners lost their lives following an explosion of an improperly loaded charge of explosive, at Stellarton, Nova Scotia, on April 16. Four of these men are believed to have been killed instantly by the blast, while the other three were gassed when trapped in a shaft.

On June 26, three men were overcome by gas in a well, on a farm near Sedalia, Alberta.

Two river drivers were drowned when their canoe upset near Fort Frances, Ontario, on May 13. On May 19 two fire rangers employed by a forest fire protective association, were drowned when their canoe capsized near Kipawa, Quebec. Two labourers were drowned at High Falls, Quebec, on June 30, when their boat went through an open sluice gate.

On April 22, two fishermen fell through an ice hole and were drowned in Trout river, Prince Edward Island.

A fall of rock in a stope killed two miners near Nelson, British Columbia, on April 23; and three miners lost their lives in a similar accident at Froid, Ontario, on June 25. Two

miners were killed by a fall of rock in a coal mine at Saunders, Alberta, on June 8.

In steam railways, an engineer and fireman were killed when an engine was derailed, near Heatherton, Nova Scotia, on April 17. In water transportation, a seaman, boatswain and stoker were drowned when a ship collided with their freighter, in a fog, in the Gulf of St. Lawrence, Quebec, on June 16.

On May 17, three firemen were crushed by a falling wall while fighting a fire at a convent, at Joliette, Quebec.

### Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first quarter of 1935 has been compiled which contains 20 fatalities, of which 2 were in logging, 8 in mining, 2 in manufacturing, 6 in transportation and public utilities, 1 in trade, and 1 in service. Seven of these accidents occurred in January, 6 in February, and 7 in March.

A further supplementary list of accidents occurring in 1934 has been made. This includes 7 fatalities of which 2 were in fishing and trapping, 1 in mining, 1 in manufacturing, 1 in construction, 1 in trade, and 1 in service. One of these accidents occurred in July, 1 in August, 1 in September, 2 in October, and 2 in December.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Responsibility of Employer for Employee's Negligence

ON November 9, 1932, a young man, under twenty-one years of age at the time, was employed in a subordinate position in a branch of a Bank (the appellant). He was charged with the duty of acting as a messenger in conveying sums of money from time to time from the branch to the head office and vice versa.

On the day mentioned the young man telephoned to his father to know if he might have the use of the car at 3 o'clock in the afternoon, to which his father agreed, and the young man, accompanied by a fellow-worker, conveyed from the branch to the head office a substantial sum of money. While returning, the car driven by the employee ran over a woman and killed her.

Action for damages was brought by the woman's husband (the respondent) in the Quebec Superior Court, as a result of which the appellant was instructed to pay to the respondent the sum of \$8,260.

An appeal from the verdict of the jury in the Superior Court was brought by the appellant to the Supreme Court,

In the Supreme Court the case was reviewed by Mr. Justice Hall as follows:—

"The only question with which we are concerned in the present appeal is, whether or not the young man who was driving the automobile which struck the respondent's wife, was at that moment in the exercise of his functions, or in the performance of his work, as an employee of the Bank. . . .

"The cashier states that the automobile was borrowed for the convenience of the officers of the Bank; no special permission was given, as there was a general understanding to that effect; he himself, on the day in question, asked the young man if he could not borrow his father's car. A fellow worker adds that they had made use of the automobile on five or six occasions during the two months which preceded the date of the accident.

"On that day, the young man had telephoned to his father from the office of the Bank, about twelve o'clock noon, asking if he could have the car during the afternoon; the car was delivered at the Bank about 3 o'clock in the afternoon, and presumably was parked there for upwards of an hour before the young man and a fellow worker started for the head office

"There can be no possible doubt that the officers of the Bank knew that the young man and a fellow worker were making use of the automobile for the purpose of taking surplus money to the head office, and bringing back notes for circulation at the branch. . . . The Bank might have been able to evade responsibility had the automobile been in charge of a chauffeur employed by the young man's father, and the car and its driver merely loaned to the young man for the purpose of the trip, but, in the present instance, he was to drive the car, not as the representative of his father, but as the employee of the Bank, and on the Bank's business.

"In my opinion, therefore, the verdict of the jury is well founded."

The appeal was dismissed.

. . . *Banque Provinciale du Canada versus Ricciardi* (Rapports Judiciaires de Quebec), 1935, page 531.

#### **Power to reopen case under Workmen's Compensation Board**

On June 18, 1929, a workman received an injury to his back. He died on September 1, 1929. Upon instruction from the New Brunswick Workmen's Compensation Board, the provincial pathologist performed an autopsy on the body and in his report of September 30, 1929, stated that in his opinion there was no connection between the alleged injury and the findings of the post-mortem examination, and upon the basis of the pathologist's report the medical examiner of the Board certified that the workman had died of cancer. On October 17, 1929, the medical examiner for the Board finalised the case for weekly compensation payments as of July 17, 1929, apparently allowing one month's compensation in respect of the injury. On November 15, 1929, legal counsel, acting for the wife of the deceased, wrote the Board stating that the petitioner was not satisfied with the findings of the Board and applied "to have an enquiry held under oath by the Board, for the purpose of ascertaining whether the late workman died as a result of injuries received in the course of his employment or as is contended by the Board from cancer of the stomach."

On November 20, 1929, the Board replied that no claim of dependency had been filed and in compliance with a further request from the petitioner's counsel claim papers were sent by the Board. These were completed and returned.

On December 24, 1929, the Board sent the following identical letter to the barrister and to the former employer of the late workman:—

"At a meeting of the Workmen's Compensation Board held this day (meeting seems to have been on December 23, but that is immaterial) the above claim was considered and the same disallowed."

Following receipt of this letter, petitioner's counsel again requested a formal inquiry under oath. To this request of December 27, the Board replied under date of December 30, 1929:—

"At a meeting of the Workmen's Compensation Board held this day, the above claim was considered and the Board refused to reopen the same."

Following this correspondence several applications were made to the Board for a hearing of the case, the appellant says for a public hearing, under s. 24 of the Act, the respondent says for a reopening of the case. The Board refused to hear the case again until the year 1934. On February 7 of that year the Board acceded to the request of the appellant and agreed to give the petitioner an opportunity to be heard. A hearing took place at Saint John on September 6, 7 and 11, 1934, at which objection was taken by counsel on behalf of the New Brunswick Accident Protective Association that as the case had already been heard and decision given on December 23, 1929, the Board had no power to re-hear the case, the only power to re-hear being provided by s. 43 of the Act, and that the present case did not come within the provisions of that section as interpreted in a recent case (*The King v. Workmen's Compensation Board* 1934, 3 D.L.R. 753). Subject to this objection the Board went on with the hearing. After consideration, judgment was given by the Board (November 22, 1934) disallowing the claim. The Chairman of the Board held that s. 43 applied, and the Board had no power to reopen the case, and further there was no connection between the accident and the death. One of the members of the Board held that the accident contributed to the death, but that in view of the opinion of the Chairman of the Board, a lawyer, and that of the Board's solicitor, s. 43 applied and the case could not be reopened. The third member of the Board considered that the death resulted from the accident and that s. 43 did not apply, or at least preclude the Board from rehearing the case.

From this decision of November 22, 1934, the petitioner applied for leave to appeal to the New Brunswick Supreme Court on certain questions as to the jurisdiction of the Board and of law.

This appeal was granted, and the decision of the Supreme Court as given by Mr. Justice Richards was in part as follows:—

"It was decided by this Court in *The King v. Workmen's Compensation Board* (1934), 3 D.L.R. 753, 42 C.R.C. 334, that that section deals only with circumstances which follow an award and not those which precede it. We have found in the present case, as above indicated, that the hearing of December, 1929, was in order and the decision or award of December 23, 1929, was properly made. It follows, therefore, that s. 43, as interpreted in *The King v. Workmen's Compensation Board* applies and the Board in the present case was right in deciding on November 22, 1934, that they had no authority to reopen or re-hear the case.

"The opinion of the Court is that the application of the petitioner should be refused."

*Goguen vs. New Brunswick Workmen's Compensation Board*, *Dominion Law Reports*, 1935, Vol. 3, page 104.

### Responsibility of Master when Servant Carries Passengers

The defendant, a servant of an oil company, was driving a truck owned by the company. While on his way to deliver oil to the compressors which were working on the highway, he met the plaintiff and her friend. He stopped his truck, and after conversation, with the plaintiff and her friend, they got in the cab of the truck and sat in the seat with the defendant, the plaintiff sitting at the right side beside the right door of the cab. It was intended that they would go to the compressors and then be driven back.

The plaintiff states that the door at her side came open twice before they arrived at the first compressor and that she told the defendant that she was scared, that he was driving too fast and that if he did not go slower she would get out. When they arrived at the first compressor they all got out, and after the driver delivered oil, the parties got back in the cab, the plaintiff sitting as before at the right side of the seat beside the right door. Shortly after, while the truck was going down a slight grade, the door of the cab opened and the plaintiff fell out and was badly hurt. The defendant says that his rate of speed was from fifteen to twenty miles an hour and that at the time of the accident the rate of speed was about ten miles an hour. The plaintiff said that the rate of speed was normal and about twenty miles an hour.

The plaintiff further contended that the catch of the right door of the truck was defective. Other witnesses contended that it was not defective.

In giving his decision, the judge stated: "The driver of the truck had been instructed not to take passengers in the truck with him and the taking of the plaintiff as a passenger was not within his authority and was not, as stated by Latchford, C.J., in *Croton v. Leonard and Johns* (1931), 66 O.L.R. 566, 'an act which came within the scope of the driver's authority, and was not a mode of exercising his master's employment.'

"The action therefore will be dismissed with costs."

## International Survey of Legal Decisions on Labour Law

THE ninth issue of the *International Survey of Legal Decisions on Labour Law*, 1933, published at Geneva by the International Labour Office, has been received recently. As in previous years the survey contains a variety of typical court cases touching nearly every phase of labour law in England, France, Germany, Italy and the United States. "Since national legal systems are dissimilar", the report states, "and uniform international definitions do not exist, the plan of the *Survey* is based first and foremost on the facts of social life, which bear a close resemblance in the different countries."

The purpose of the *Survey* is to indicate the legal developments of specific social problems. The individual problems of labour

law, it is stated, have their roots in the fundamental problem of the conflicting principles of freedom of contract and industry on the one hand, and state or collective regulations of the relations between employers and workers on the other. This circumstance shows the need of taking account of cases from industrial law and general law in so far as they have any bearing on labour law.

The legal decisions in various countries are arranged under the following general headings:—General principles of labour law, including contracts, scope of labour law, with regard to persons, employers' liability (for accidents and occupational diseases) etc.

Occupational organization, including trade associations (legal status, protection of the right to organize, etc.), collective agreements,

collective labour and economic disputes, arbitration and conciliation procedure.

Organization of industrial undertakings, including works councils, etc.

Conditions of employment and protection of the individual worker, including rights and obligations arising out of the contract of employment, etc.

Conditions of employment of special groups of workers, including apprentices and salaried employees, etc.

Wages and salaries, including minimum wage and protection of the wage claim, etc.

Hours of work, including the eight hour day, weekly rest, holidays with pay, overtime.

Social welfare and insurance including employment exchanges, unemployment relief, unemployment insurance, workmen's compensation, sickness insurance, invalidity and old age insurance, insurance in case of accidents in agriculture and to dockers, etc.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

INDUSTRIAL employment in Canada at the beginning of August showed an advance that considerably exceeded the average gain recorded in August of the last fourteen years, according to statements tabulated by the Dominion Bureau of Statistics from 9,387 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. They employed 949,940 workers, compared with 934,633 on July 1. This increase of 15,307 workers or 1.6 per cent continued the moderately forward movement that with but one interruption has characterized the industrial situation since the beginning of 1935, the only general reduction since January having been that of a seasonal nature on April 1. The level of employment, considerably higher than at the opening of the year, was also higher than in any month of 1934, 1933, or 1932; the index, at 101.1 on August 1, was over seven per cent above that of 94.4 indicated on January 1, and compared favourably with the August 1, 1934, 1933 and 1932 index numbers of 99.9, 87.1 and 86.3, respectively. The experience of the last fourteen years indicates that employment usually, though not invariably, gains at the beginning of August, there being on the average, a fractional increase in the index; after correction for seasonal influences, the August 1 index therefore slightly advanced, standing, when adjusted, at 96.8, as compared with 95.9 in the preceding month.

As already stated, the unadjusted index (based on the average in the calendar year 1926 as 100) stood at 101.1 on August 1, 1935, compared with 99.5 in the preceding month, while on August 1 of the fourteen preceding years, the index was as follows: 1934, 99.9; 1933, 87.1; 1932, 86.3; 1931, 105.2; 1930, 118.8; 1929, 127.8; 1928, 119.3; 1927, 110.5; 1926, 105.5; 1925, 97.5; 1924, 95.8; 1923, 101.4; 1922, 94.2 and 1921, 90.0.

At the beginning of August, 1935, reports were forwarded to the Department of Labour by 1,723 local trade unions, embracing a membership of 164,357 persons. Of these, 24,736

or a percentage of 15.1 were unemployed, as compared with 15.4 per cent at the beginning of July, 1935, and with 17.9 per cent at the beginning of August, 1934.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business transacted during July, as indicated by the average daily placements effected, was more than that of June, but somewhat less than the daily average recorded during July a year ago, the gain in the first instance being chiefly due to increased placements in farming and construction and maintenance, and the decline in the second to a reduction in relief placements recorded under the construction and maintenance group. Vacancies in July, 1935, numbered 35,168, applications 55,778, and placements in regular and casual employment 33,043.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent advanced from \$15.94 in July to \$16.15 in August. The increase was due to the higher cost of foods, chiefly eggs and potatoes. Some comparative figures for previous dates are \$15.92 for August, 1934; \$15.41 for June, 1933 (the low point in recent years); \$21.90 for August, 1929; \$21.32 for August, 1926; \$26.92 for July, 1920 (the post-war peak); and \$14.41 for August, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was fractionally higher in August at 71.6 as compared with 71.5 for the previous month. Figures for earlier dates are 72.3 for August, 1934; 63.5 for February, 1933 (the low point in recent years); 98.4 for August, 1929; 99.1 for August, 1926; 164.5 for May, 1920 (the post war peak); and 66.1 for August, 1914.

The table on page 796 gives the latest information available reflecting industrial conditions in Canada. The index of the physical volume of business in July was nearly 4 per cent higher than in June and only fractionally lower than in May which month marked the peak since 1930. As compared with July last year the index was about 8 per cent higher,

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(2) For group figures see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending July 27, 1935 and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending August 10, July 13, and June 15, 1935; August 11, July 14, and June 16, 1934.

(7) MacLean's Building Review.

while as compared with the low point in February, 1933, the advance was nearly 54 per cent. Of the principal factors included in the index, mineral production and trade employment were slightly lower in July than in June, while other groups advanced, manufacturing chiefly because of gains in foodstuffs and in the production of iron and steel, and the construction group because of a substantial increase in the value of contracts awarded. Other groups to advance were electric power output, carloadings, imports and exports. All the above groups were higher in July, 1935, than in July, 1934. Information available for August shows advance over July in employment, the number of cars loaded, contracts awarded and in sugar manufactured, while gross earnings of the Canadian National Railways were somewhat lower.

During August there were on record twenty strikes and lockouts, involving 7,573 workers with a time loss of 49,429 man working days as compared with twenty-five disputes during July involving 7,355 workers and causing a time loss of 67,888 days. Most of the time loss in both months was due to a strike of longshoremen at Vancouver, B.C., and a sympathetic strike of various classes of water transport workers, beginning in June. Three other disputes involved relatively large numbers of workers, women's cloak and suit workers, Montreal, P.Q., cotton factory workers, Three Rivers, P.Q., and coal miners at Cumberland, B.C., but were of brief duration. In August, 1934, there were recorded thirty-one disputes involving 13,263 workers with a time loss of 75,660 days, due chiefly to two strikes of men's clothing factory workers and women's dress factory workers in Montreal, P.Q. Of the twenty disputes in August, eleven were recorded as terminated, five resulting in favour of the employers concerned, one ending in favour of the workers involved, compromise settlements being reached in four cases, while the result of one was recorded as indefinite. The disputes unterminated at the end of the month numbered nine and involved some 2,000 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off or definitely declared terminated by the unions involved.

#### **Industrial Disputes Investigation Act.**

During the past month reports were received in the Department from the Board of Conciliation and Investigation established in connection with a dispute

between various coal mining companies in the Drumheller, Rosedale and Wayne districts, Alberta, and certain of their employees being

members of District 18, United Mine Workers of America. A Commissioner was appointed under the Inquiries Act, in accordance with the provisions of Section 65 of The Industrial Disputes Investigation Act, to inquire into the dispute which has been in existence for several months between the Shipping Federation of British Columbia Limited and the longshore workers at the Port of Vancouver. A Board of Conciliation and Investigation was established to deal with a dispute between the Winnipeg Electric Company Limited and affiliated companies, and their employees being members of the Association of Sub station and Hydro Plant Employees. Three applications for the establishment of Boards were received, and settlements were effected in the case of two disputes: (1) between the Canadian National Railways and Western Stevedore Company and their freight handlers at Port Arthur and Fort William, respectively, and (2) between the Hamilton By-Product Coke Ovens Limited and their operating engineers and firemen. The text of the Board's findings and details of recent proceedings under the Act appear at page 803 of this issue.

#### **Conference of Commonwealth Statisticians at Ottawa.**

Convened for the purpose of securing greater uniformity in the collection, compilation and presentation of statistics in all British Empire countries, a conference of Commonwealth statisticians commenced its sessions in Ottawa on September 13, with the Prime Minister, Rt. Hon. R. B. Bennett opening the proceedings.

In addition to the co-ordination of statistical work, another objective sought is the greater facilitation of comparisons by "speeding-up" publication. It was also considered that the work of the conference should mark a step towards international uniformity of statistics.

The conference is the second of its kind, the first having been held in London in 1920 as a result of a recommendation by the Dominions Royal Commission, appointed in 1911. This Commission, whose Canadian representative was the late Sir George E. Foster, had been unfavourably impressed during its investigations (prior to and during the war) by the omissions and lack of comparability in Empire statistics, and the remedying of these conditions constituted one of its major recommendations for promoting and increasing Empire trade.

Consequently, the subject of statistics, particularly those pertaining to trade and the production of staple goods, has been considered at Imperial conferences since then.

The agenda of the present conference is as follows:

*Population.*—Census (family, sex, age, conjugal condition, nationality, race, occupation, infirmity, dwellings, etc.); Vital Statistics (births, deaths, marriages, divorce); Migration (immigration, emigration).

*Production.*—Agriculture (field and animal husbandry, fruit-growing); Fisheries; Forestry; Mining; Power (hydro and other central electric power stations); Manufactures; Construction (railways, harbours, public works, buildings, etc.).

*Trade.*—Exports and Imports (including invisible items); Internal Trade; Prices (producers, wholesale, retail, rents, services, securities).

*Transportation and Communications.*—Railways; Tramways; Road Transport; Shipping; Canals; Express Companies; Telegraphs; Telephones; Post Office.

*Finance.*—Public (Federal, State, Municipal assets, liabilities, revenues, expenditures, debt, taxation, etc.); Private (currency, banking, insurance, loan and friendly societies).

*Labour.*—Employment and Unemployment; Strikes and Lockouts; Wages and Hours of Labour; Cost of Living; Trade Unionism; Employers' Associations.

*Miscellaneous Social Statistics.*—Education; Criminal and Civil Justice; Institutions.

### **Convention of Trades and Labour Congress**

The fifty-first annual convention of the Trades and Labour Congress of Canada is being held in Halifax as this issue of the Labour Gazette goes to press. A detailed review of the convention, including the various addresses given, the reports presented and the resolutions adopted will appear in the next issue of this publication.

### **Labour Day Messages of Canadian Labour Leaders**

Featuring the Labour Day Messages of two prominent Canadian Labour leaders were their references to recent labour legislation.

In this respect, Mr. P. M. Draper, president of the Trades and Labour Congress of Canada, stated in part:

"The passing of a number of measures aimed at bettering the economic condition of Labour and the masses of the people generally—unemployment insurance, one day's rest in seven, the eight-hour day, the economic council, and other similar measures—embodies the principles which the Trades and Labour Congress of Canada has constantly advocated

for half a century. While time alone will make possible a precise analysis of the benefits which will accrue to the workers from these measures, their effect cannot fail to be beneficial. One point which I should like to emphasize is the fact that it was Organized Labour which pioneered in creating the popular opinion needed to make these various measures popularly acceptable. The lesson this teaches is clear: Labour must continue to educate the public to the needs of the workers in order to create the atmosphere in which our legislators will place on the statute books the progressively beneficial legislation which the masses of the people constantly need. . . .

"The legislation of the last session in large part laid a sure foundation for a proper division of the profits of industry, but in the main our various law-making bodies, Dominion and provincial, have not yet provided any permanent solution to the problem of lack of jobs. Through public works programs governments have provided a huge volume of employment, a volume which was absolutely essential in the years through which we have been passing, but these programs have by no means placed all workers back at work and at best they are only of a temporary nature. . . . In pointing out that governments have not provided the cure for the unemployment problem it is at least of equal consequence to note that private initiative first failed to offer the wage-earning opportunities."

Mr. Draper also suggested that "organized labour might well turn its attention to see whether its collective thought could not devise some ways and means for a greater exploitation of our natural resources to provide jobs and to increase the wealth of Canada, particularly so that the less fortunate might be amply taken care of."

With reference to recent legislative enactments in Canada, Mr. A. R. Mosher, president of the All-Canadian Congress of Labour, stated:

"The present year was introduced by a series of remarkable pronouncements by the Prime Minister of Canada, in which views were expressed which, even a decade ago, would have appeared radical if not revolutionary. Promises were made that legislation in keeping with these views would be placed before Parliament, and while, for various reasons, performance did not keep up with promise, there is ground for satisfaction in the beginning which has been made by the Canadian government in the direction of unemployment insurance and other measures. I am aware that many workers have been keenly disappointed by the meagre achievements of Parliament in this respect, but my

own feeling is that sufficient appreciation is not given to the difficulties involved in adopting an almost unprecedented course of action, even in minor matters of social reform, and to the fact that certain constitutional and political hurdles may still stand in the way of enforcement of some of this legislation.

"It is much better to have a small beginning than none, for once a principle is admitted the full application of it is inevitable, as experience increases and the pressure of events becomes operative."

Referring to the recommendations of the Royal Commission on Price Spreads, Mr. Mosher declared: "I believe that the workers of Canada may also be encouraged by the investigation into business practices and wages and working conditions, particularly in the wholesale and retail trades. . . . The report of the commission is a notable document, not only for the facts which it makes public, but for the enlightened attitude expressed with respect to labour organization."

#### **Canada Year Book, 1934-35**

The Dominion Bureau of Statistics has recently issued the 1934-35 edition of the Canada Year Book, the official work of reference on

facts relating to economic and social development and public affairs in the Dominion.

Among the features of the present volume are: A brief description of Standard Time and Time Zones in Canada; a discussion of the Representation Act of 1933 with tabular statistics showing the population of each of the new electoral districts which will return representatives to Parliament in the next general election (October 14), and an extended presentation of the results of the 1931 Census. Of special interest to those concerned with the exploration of mineral bearing ores is the discussion of the new discoveries in economic geology, while the chapter on Mines and Minerals contains a comprehensive review of the mining industry with statistics of mineral production.

Attention may also be directed to the improvement of the introduction to the External Trade Chapter as well as to the final statistics of the Census of Distribution and Services of 1930, to which has been added a more summary treatment of retail trade based upon a 65 to 70 per cent sample of all retail trade and covering the years 1931 to 1933. In the Public Finance Chapter appears, for the first time, a comparative analysis of provincial revenues, expenditures, assets and liabilities on the basis agreed upon at the Dominion-Provincial Conference of 1933; additional material regarding national income is also included in this chapter. The Currency

and Banking Chapter includes a description of the new Bank of Canada and a classification of bank loans by industries and of deposits by amounts. Lastly, in the Miscellaneous Administration Chapter there appears a study of liquor control, liquor sales and revenues arising therefrom.

In the chapter on Labour and Wages there is given an analysis of the "Labour Force" of Canada, together with an occupational and industrial classification; a summary of the activities of the Federal and Provincial Departments of Labour; and sections on Canada and the International Labour Organization. Organized labour in Canada, fatal industrial accidents, workmen's compensation, strikes and lockouts, employment, unemployment, and unemployment relief, old age pensions, co-operation, labour legislation, legislation respecting combines, mothers' allowances, wages and hours under provincial minimum wage legislation, cost of living of wage earners.

The chapter on Prices treats of wholesale and retail process of commodities, index numbers of security prices, prices of services, index numbers of interest rates, index numbers of import and export valuations.

In addition there are other chapters dealing with immigration and colonization, agriculture, forestry, the fur trade, fisheries, water powers, manufactures, construction, transportation and communications, insurance, education, public health and benevolence.

Copies of the Canada Year Book may be obtained from the King's Printer at \$1.50 each.

#### **Group Hospitalization surveyed by Canadian Medical Association**

The subject of national health, and the more specific field of provincial health insurance were outlined in the LABOUR GAZETTE May, 1935, pages 393-394, and in previous issues. Another phase of this problem has recently been explored by the Committee on Group Hospitalization of the Canadian Medical Association, which has published the results of its survey, together with its recommendations in a booklet entitled: "Group Hospitalization or the Periodic Payment Plan for the Purchase of Hospital Care."

In an introductory note, the direction and purpose of the survey was stated to be that form of hospital insurance in which with varying details, groups of individuals make regular periodic payments to a common fund in return for which subscription such individuals (and in many instances their dependents) receive free hospital care for a specified period of time in one or more designated hospitals.

In the type of mutual plan under consideration contracts are drawn up whereby sub-

scribers agree to contribute to the fund a certain sum monthly, quarterly or annually; this may be collected in various ways. The hospital or hospitals agree(s) to provide a specified type of hospital service. The type of accommodation is defined, as are also the inclusion or otherwise of dependents, maternity care, operating room charges and other extras, length of hospitalization provided, diseases excluded, etc. The arrangement may be with one individual public hospital or with several or all public hospitals in the community. The collected fund may be directly operated and controlled by the participating hospital(s), by a joint board including the subscribers, or may be sponsored by a private lay organization paying the hospital(s) on a basis of service rendered. Enrolment may be limited to groups, usually employed, or membership may be extended to individuals. There may or may not be a waiting period.

The report consists of chapters dealing with: existing plans for group hospitalization in Canada, Great Britain and the United States; advantages and disadvantages of the periodic plan for hospital care; the status of group hospitalization; and general recommendations, etc.

There are thirty-five specific recommendations including a section respecting details relating to the medical profession. The first three of the general recommendations of the Committee are as follows:—

1. Some form of voluntary group hospitalization, either as an entity or as part of a broader voluntary plan, should be included in any national or provincial plan of health insurance obligatory to low income groups; such group hospitalization should be available to those above the specified income level.

2. Before acceptance or promulgation of any group hospitalization plan, such should have received the approval of the local medical society and the local hospital council or provincial hospital association. Any suggestions from these bodies should be given careful and sympathetic consideration.

3. No plan should be set in operation without a clear understanding with the provincial and federal superintendents of insurance with respect to its status under insurance legislation and regulations. It would seem most advisable also that the Hospital Department in the provincial government be closely consulted during the formative stages.

#### **Australian Unemployment Census**

According to the official statistics (recently received) of the Commonwealth of Australia Unemployment Census of June 30, 1933, the

total number of persons returned as wholly unemployed at that time was 481,044. The

total number of persons included in the salary and wage earner class on that date, was 2,145,564, while the percentage in this group who were unemployed was 22.4.

In the tabular statistics a distinction is made between the total number unemployed from any cause (481,044) and those whose unemployment (exclusive of sickness or other reasons) is directly attributable to business depression. On this basis of computation, the total unemployed on June 30, 1933, was 439,788, and the percentage, 20.5. It was also indicated that among the unemployed persons were numbers of youths of both sexes (16 years but under 21 years) who stated that they had never been in employment. This number totalled 22,771.

In the Commonwealth as a whole, the total population increased between 1921 and 1933 by 1,194,105 persons. In 1921, 159,080 persons were unemployed. During the twelve years the number of unemployed increased by 321,964, and the number of those classed as "other than unemployed" by 872,141.

The returns of unemployment furnished quarterly to the Commonwealth Statistician by trade union secretaries indicate that the peak of unemployment in Australia was reached during the second quarter of 1932. In May of that year, the unemployed members of reporting unions represented 30.0 per cent of the total membership of such reporting unions. By the date of the Census, the unemployment percentage of the reporting unions had fallen to approximately 25.4 per cent. The improvement has been continuous from May, 1932, to August, 1934, the date of the last returns, when the trade union percentage stood at 20.4.

It is pointed out, however, that trade union returns relate predominately to males while the census figures for all unemployed (481,044) include males and females. Using the trade union percentage as an index of change the unemployed percentage of the total at the three selected periods is estimated as follows: May, 1932 (the peak of unemployment) 26.5; June, 1933 (the time of the census) 22.4; and August, 1934, 18.0. Eliminating those who were unemployed for reasons not associated with scarcity of work (the total unemployed on this basis was 439,788) the percentage arrived at is: May, 1932, 24.6; June, 1933, 20.5 and August, 1934, 16.1. From these statistics, the report makes the following conclusion:

"It would thus appear that those wholly unemployed and seeking work in Australia in August last represented about 16 per cent of the total number dependent on employment.

"It would appear that since the peak of unemployment was reached in May, 1932, one person in every three then unemployed has found employment. Since the Census was taken in June, 1933, one person in every five then unemployed has secured employment."

A summary table for the entire Commonwealth shows the numbers of unemployed by causes as follows: scarcity of employment, 412,231; illness, 25,491; industrial disputes, 1,611; accident, 4,875; other causes (mostly due to scarcity of employment), 1,989; voluntarily, 7,381; not stated, 27,557.

Of the total unemployed in June, 1933 (481,044), 168,481 were at that time unemployed less than one year; 60,044 were unemployed one year and under two; 78,515 for two years and under three; 81,564 for three years and under four; 43,223 for over four years; and 49,217 for an unstated duration.

#### Provisions of United States Social Security Act

References have been made in previous issues to the Social Security Bill before the United States Congress.

This measure has now become law following its passage by Congress and its approval on August 14 by President Roosevelt. The major provisions of the Act, which is to be administered by a board of three members, independent of the United States Department of Labor, are summarized as follows:—

(1) Grants to States for pensions to needy old persons, over 65, Federal grants are to be made on a 50-50 matching basis with the States, except the Government's share in no case to exceed \$15 monthly.

(2) Contributory old-age annuities ranging from \$10 to \$35 monthly, depending on wages and length of employment. Pensions to be paid only in event of retirement on reaching 65. Farm labour, domestics, Government employees and casual labour excluded. The plan is to be financed by a payroll tax ultimately totalling 6 per cent and borne equally by employer and employee. Such tax to begin at 1 per cent in 1937 and increase by gradual steps until it reached 3 per cent in 1949.

(3) Federal fostering of State unemployment insurance plans, by Federal grants in aid, and imposition of uniform payroll tax on employers. On and after January 1, 1936, the excise pay roll tax is to be 1 per cent, rising to 2 per cent in 1937 and to 3 per cent in 1938 and thereafter. Employers of eight or more persons for any 20 weeks in the year are to be taxed. Federal Government allows up to 90 per cent credit to employers who pay taxes into strictly State funds. States allowed freedom of choice in

setting up their own insurance plans. A Federal subsidy of \$4,000,000 in 1936 and \$49,000,000 subsequently to assist States in administering laws.

(4) Grants to States for aid to the needy blind, the States to have the right to determine if only "permanently" blind would benefit. Grants, not exceeding \$15 monthly on a 50-50 matching basis, to be made to States meeting set standards. Federal appropriation of \$3,000,000 to launch program, and "necessary" amounts thereafter.

(5) Financial aid to States for carrying out State plans to help dependent children. Grants on a one-third matching basis, but in no case would the Government pay more than \$6 for any single dependent child.

(6) Grants to States to aid them in extension and improvement of services for promoting health of mothers and children—Some grants would be allotted equally among the States, some according to the number of births, some on the basis of need. All allotments on the basis of need to be under a 50-50 matching system, States would also be aided in extending medical, surgical and corrective services for crippled children.

(7) Appropriation of \$8,000,000 annually to help States in maintaining adequate public health services.

With the exception of the section relating to Federal old age benefits, the entire Act is based upon the principle of Federal-State co-operation. It will therefore be necessary for the States to act in order to secure the benefits accruing from the Federal enactment. In many cases this will be possible by State administrative action, but in some cases amendments to State laws or new State legislation will be necessary.

#### Compulsory Labour Service in Germany

In an analysis of the German Federal Labour Service Act, enacted recently, the British *Ministry of Labour Gazette* for August shows that under this measure the obligation to perform labour service for the nation is imposed on all young Germans of both sexes. The Act thus marks the definitive transference to a compulsory basis of the labour service which had developed since legislative provision was first made in the Second Presidential Emergency Order, dated June 5, 1931, for the institution of a voluntary labour service as an unemployment relief measure. The Act also implements the provision contained in the Defence Act (*Wehrgesetz*), dated May 21, 1934, which stipulates that compulsory labour service must precede active service in the defence forces.

According to the Act, the purpose of the Federal Labour Service is "in the spirit of National-Socialism, to develop in the youth of Germany a sense of national solidarity (Volksgemeinschaft), a true conception of labour and, in particular, due respect for manual labour." The service is described as a "service of honour towards the nation," and it is to be performed on work of public utility. Central supervisory control is vested in the Federal Minister of the Interior, and immediate administrative control is to be exercised by a "Federal Labour leader," who is to be the head of the Federal Labour Service Directorate, and to be responsible for the organization of the service, the utilization of the available labour power and the training and education of the workers. Pending the issue of special legislative provisions for females, the Act applies only to able-bodied young males between the ages of 18 and 25 years. As a rule, the labour conscripts are to be called up in the calendar year in which they complete their eighteenth year; but provision is made for voluntary enlistment at an earlier age, which the Federal Minister of the Interior, by an Order dated June 27, 1935, has fixed at not less than 17 years. The postponement of enrolment may also be permitted for periods up to two years, or, for cogent reasons of an occupational nature, up to five years. The Act provides that the quota to be called up in each year and the duration of the service are to be determined by the Federal Chancellor, who, in a Decree dated June 27, 1935, has fixed the period of service at six months until further notice, and the average numerical strength, including permanent staff, at 200,000 during the period from October 1, 1935, to October 1, 1936. Persons who are of non-Aryan descent or who are married to non-Aryans, and also persons who have been convicted of certain civil or political offences may not be admitted to the Federal Labour Service.

In conclusion, the *British Ministry of Labour Gazette* further points out that the service is not to establish an employment relationship within the meaning of existing labour law; it is subject to special disciplinary regulations, and express authorization must be obtained before members may marry, engage in business, or take up auxiliary paid employment.

During the month of August there were 4,955 accidents reported to The Workmen's Compensation Board, as compared with 5,480 during July, and 5,127 during August a year ago. The fatal cases numbered 26, as against 29 in July and 25 last August. The benefits awarded amounted to \$447,126.93, of which

\$362,798.72 was for compensation and \$84,328.21 was for medical aid. The benefits awarded during July amounted to \$420,427.47, and \$415,973.77 was awarded during August of 1934.

The Department of Immigration and Colonization has recently issued figures showing the immigration to Canada for the half year ended June 30, 1935. The total number of immigrants entering the Dominion during the period was 4,961, of whom 1,154 were males, 2,072 females and 1,735 children under eighteen years of age. Those of British origin numbered 914, of United States origin, 2,396, of Northern European races, 292, and other races, 1,359. In the corresponding period of 1934 immigration totalled 6,047, including 1,008 British, 2,824 United States origin, 352 of Northern European races and 1,863 of other races.

Free medical service for the company's Toronto employees has just been established by United Cigar Stores Limited, according to a recent announcement. This service is a further contribution by the company towards the welfare of its employees. Under the plan the employees will have the benefit of periodic health inspection and free treatment. This service is in addition to the system of sickness and disability allowances and the group insurance plan. Another regular feature of the company's policy is the granting of two weeks' holidays with pay.

According to a recent announcement by the Hon. A. A. Dysart, premier of the province, preliminary steps are now being taken to implement the Old Age Pensions Act in New Brunswick. The Act was passed in 1930 and was to come into effect upon proclamation (*LABOUR GAZETTE*, 1930, page 1153).

At the 37th annual convention of the Ontario Municipal Association held recently, a resolution was adopted recommending legislation that would permit adoption of a pension scheme for municipal employees, the plan to be evolved by the provincial government.

Old Age Pensions were being paid in twenty-five States and two Territories of the United States at the end of 1934. There were 236,205 pensioners on the roll on December 31, for whose care \$32,313,515 was expended during the year. These figures represent an increase of 104 per cent in number of pensioners and of 23 per cent in disbursements as compared with the preceding year. Benefits averaged \$14.69 per month as compared with \$19.34 in 1933; they ranged in the various States from 69 cents to \$26.08.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**T**HREE applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

(1) From employees of the Fraser Valley Milk Producers Association, being members of Local Union No. 464, Milk Wagon Drivers and Dairy Employees Union. The applicants stated that they had submitted to the Milk Producers Association a proposed agreement covering wages and working conditions for employees in the plants at Delair and Sardis, B.C., which, it was claimed, the association refused to discuss with them. Forty-eight employees were declared to be directly affected by the dispute and 252 indirectly. As the dispute in question does not relate to an industry falling within the direct scope of the Industrial Disputes Investigation Act, a Board of Conciliation and Investigation can be established only by mutual consent of the employer and employees concerned. The employer's statement in reply to the application did not indicate concurrence in this procedure. An officer of the Department has been instructed, however, to interview the parties concerned and endeavour to effect a settlement by conciliation.

(2) From motormen, conductors and busmen, in the employ of the Winnipeg Electric Company, being members of the Street Railway Employees' Unit, One Big Union. The employees directly concerned in this dispute were stated to number 575, and those indirectly affected, 350. The dispute was occasioned by the suspension of one employee and the dismissal of another employee, the applicants demanding re-employment of the two men in certain positions. The Department was subsequently notified by the applicants that further negotiations had been entered into with the company, and that they accordingly desired to withdraw the application.

(3) From various classes of employees of the City of Winnipeg, being members of the Federation of Civic Employees of the City of Winnipeg and affiliated unions. Approximately 300 employees are stated to be directly affected by the dispute, which relates to the matter of wages and working conditions, the employees requesting restoration of the wage rates in effect prior to the last ten per cent reduction; a 44-hour week, and other changes in working conditions. The matter of the application has been taken up with the civic authorities.

### Royal Commission Appointed

On September 10 the Honourable Mr. Justice H. H. Davis, of the Supreme Court of Canada, was, on the recommendation of the Minister of Labour, and in accordance with Section 65 of the Industrial Disputes Investigation Act, appointed a Commissioner under the provisions of Part 1 of The Inquiries Act, to inquire into the industrial dispute which has been in existence for several months involving the Shipping Federation of British Columbia Limited and the longshore workers of the Port of Vancouver. It will be recalled that on May 31 a Board of Conciliation and Investigation was established by the Minister of Labour on the application of the Shipping Federation of British Columbia to deal with a dispute relating to the matter of despatching of waterfront labour (LABOUR GAZETTE, June, page 512). However, neither of the disputing parties submitted a nomination for Board member, and the Board was accordingly unable to function (LABOUR GAZETTE, July, page 608). The Department of Labour from time to time, as opportunity offered, endeavoured through its conciliation service to secure an adjustment of the dispute, but, when it became evident that there was little likelihood of further efforts of the Department proving effective, it was decided to conduct an official inquiry looking to a settlement of the existing differences at the earliest possible moment.

### Board Established

A Board of Conciliation and Investigation was established by the Minister of Labour on September 9 to deal with a dispute respecting wages and working conditions between the Winnipeg Electric Company, the Manitoba Power Company, the Northwestern Power Company and the Winnipeg, Selkirk and Lake Winnipeg Railway Company, on the one hand, and certain of their employees, on the other hand, being members of the Association of Substation and Hydro Plant Employees. Mr. R. B. Russell, of Winnipeg, was appointed a member of the Board on the recommendation of the employees concerned, and the employing companies have been requested to submit a nomination for Board member to be appointed on their behalf. The application in this matter was received from the employees early in August (LABOUR GAZETTE, August, page 717).

### Other Proceedings Under the Statute

The Honourable W. A. Gordon, Minister of Labour, and the Honourable Dr. R. J. Manion,

Minister of Railways and Canals, were notified on August 19 that the wages dispute which had been in existence for several months between the Canadian National Railways and the Western Stevedore Company, on the one hand, and their freight handlers at Port Arthur and Fort William, on the other hand, had been amicably settled, the employees accepting the companies' offer of three cents an hour increase in wages, effective August 1, 1935. The employees affected are truckers, stowers, loaders, sealers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The settlement is the outcome of direct negotiations between the disputing parties which were entered into at Ottawa on July 31, following conferences with the Minister of Labour and the Minister of Railways and Canals (LABOUR GAZETTE, August, page 717).

As a result of departmental mediation the dispute between the Hamilton By-Product Coke Ovens Limited and certain of their employees concerning wages and working conditions was terminated in August, an agreement having been signed by representatives of both parties concerned. The application for the establishment of a Board of Conciliation and Investigation had been received in the Department on July 3 from the employees, being locomotive, hoisting and stationary engineers and firemen, members of the International Union of Operating Engineers (LABOUR GAZETTE, July, page 607). A conciliation officer of the Department visited Hamilton on several occasions in connection with this matter and held separate and joint conferences with the parties directly concerned. The agreement finally reached is dated August 14, 1935.

Reference was made in the August issue of the LABOUR GAZETTE, page 716, to the receipt in the Department of an application for a Board of Conciliation and Investigation from

certain employees of the Sandwich, Windsor and Amherstburg Railway Company, being members of Division No. 616, Amalgamated Association of Street and Electric Railway Employees of America. An officer of the Department of Labour visited Hamilton towards the end of July and interviewed the respective parties concerned. He also arranged and attended a joint conference between the committee of the union and officers of the company. The two points mentioned in the application were fully discussed, namely: (1) whether or not 171 union men should be compelled to work with 11 non-union men, and (2) if the board of management has the right to refuse to meet the accredited representatives of the men as provided in a certain agreement between the management and the men. In regard to the first item the chairman of the Board of Management stated that, so far as the management was concerned, they had no objection to the 11 non-union men in question becoming affiliated with the Amalgamated Association of Street and Electric Railway Employees of America, but that the matter was one for these employees to determine themselves, and that the company would neither compel them to join nor prevent them from joining any union. In this connection the employees' committee claimed that they had never requested the management to coerce or compel any of the employees to join the union, and did not expect them to do so. In reference to the second point the chairman stated that he would be prepared at any time upon 24 hours' notice to meet the employees' committee for the purpose of discussing any matter pertaining to the employment of the street railway men. As no dispute apparently exists between the Commission and the union on the two points set out in the application, there does not appear to be any ground for the establishment of a Board as requested.

### **Report of Board in Dispute between Coal Operators in Drumheller, Rosedale and Wayne Districts, Alberta, and their Employees, Members of District 18, United Mine Workers of America**

The Board of Conciliation and Investigation established in May to deal with a wages dispute between various coal mining companies in the Drumheller, Rosedale and Wayne districts in Alberta and certain of their employees, reported to the Minister of Labour early in August. The employees concerned, approximately 1,350 in number, are members of District 18, United Mine Workers of America. The personnel of the Board was as follows: The Honourable Mr. Justice Horace Harvey, Edmonton, chairman, appointed by the Minister in the absence of a joint recommendation

from the other members of the Board, Major L. R. Lipsett, and Mr. A. J. Morrison, both of Calgary, nominees of the employers and employees, respectively.

The report of the Board was signed by the chairman and Mr. Morrison. Major Lipsett submitted a minority report. The text of these reports is given below. By a referendum vote the miners on August 26 accepted the Board's recommendation that wage rates should be increased 5 per cent, and it is understood that agreements have been signed with the Alberta Block Coal Company, Ltd., The

Newcastle Coal Company, Ltd., The Midland Coal Mining Company, Ltd., The Western Gem Coal Company, Ltd., and The Red Deer Valley Coal Company, Ltd. Three coal companies had, up to the time of going to press, refused to accept the Board's findings, namely: The Jewel Collieries Ltd., The Great Western Coal Company, Ltd., and the Rosedale Coal Company, Ltd.

### Report of Board

To the Honourable,

The Minister of Labour.

The Board of Conciliation and Investigation constituted under the Industrial Disputes Investigation Act by virtue of the appointment of representatives of the employees, being miners in eight mines in the Drumheller District, acting through the United Mine Workers of America, District 18, and the employers being the operators of the said eight mines, and your appointment of the Chairman on the 17th day of June, 1935 begs to submit its report as follows:

The Board met in Calgary on the 22nd of June and decided to sit in Drumheller on June 27 for the purpose of taking evidence from the parties to the dispute. Notice was duly given and on June 27 the Board met and for nine days heard oral evidence and received voluminous documentary evidence during which time the members of the Board visited the workings of two of the important mines.

The questions in dispute are indicated by the claims made by the employees in their application for a Board which are as follows:

1. A request for a conference to consider inequalities.
2. That all Day Wage rates and all Contract rates including coal, yardage, timber, etc., be on the basis of the 1932 agreement plus twelve and one-half per cent (12½ per cent) increase over said rates.
3. That the minimum wage rate be adjusted to read, 'Six dollars and twenty-seven cents (\$6.27)' in place of 'Five dollars (\$5).'
4. That all coal be paid for on the run-of-mine basis at the rate of two thousand (2,000) pounds to the ton.
5. That provision be made in our new agreement that in the event of a lay-off becoming necessary through business depression or other unforeseen circumstances, absolute seniority rights to prevail.
6. That owing to the unemployment condition prevailing in the mining industry, we would urge the coal operators at this time to inaugurate the six-hour day and five-day week.

7. That the agreement be made for a period of two (2) years, expiring August 31, 1937.

The most substantial dispute was over the question of wages.

As the Board has had no difficulty in reaching a unanimous conclusion on the other questions, that it would not feel justified in recommending the allowance of any of the claims, it is perhaps advisable to deal with them in the first instance and shortly state the reasons for the Board's conclusion.

The claim for payment on a run of mine basis is based on what some of the miners consider a grievance but which the Board considers more apparent than real.

The market for Drumheller coal is limited very largely to lump coal. All the tipples are so constructed that when the coal is lifted and dumped it passes over 1½-inch screens through which all the slack and small coal will fall to the bottom allowing only the lump coal to pass into the weighing pan where it is weighed and for that weight only the miner is paid. His view is that he is not paid for the slack and small coal which is of value to the operator and for which to some extent, at least, he finds a market. The evidence, however, shows that he is wrong in the view that he receives no recompense for his work in mining that coal because the price paid for the lump coal includes an allowance for the coal that is not weighed.

It appears that this has been a matter of controversy between the parties for years and that some years ago a Board unanimously recommended the present method. The apparent grievance could be removed if the coal were weighed in the form in which it comes from the mine with an adjustment of the price to be paid but that would involve a reconstruction of much of the equipment at a considerable expense which in the present condition of the industry is most undesirable and it is pointed out that when payment is made on a run of mine basis there is much room for dishonesty and it is an incentive to carelessness even where there is the utmost honesty. Adequately to meet that would require two weighings which would involve a further and prohibitive expense.

The claim for a rule of absolute seniority is also in the opinion of the Board not justified.

The contract just expired has a provision for the recognition of prior service which the Board considers proper and sufficient, considering the responsibility of the operator for the safety of the miner and his rights as regards efficiency.

The six hour day and five day week is in the Board's opinion something that may be worked for and looked forward to in the

future for industry, generally, and something that some of the operators in their evidence expressed themselves in favour of when it can be made general and the Board agrees with them that it is not a present practical proposal as applied to the Drumheller coal industry.

This leaves the question of the term of the contract and what is really in dispute is the time of its expiry rather than its length.

The Drumheller coal is a domestic coal used almost exclusively for heating purposes, and, therefore, has little market in the summer. The result is that by the end of March the main production of the mines is over for the season and does not commence again till September. In the past the contract has ended at the end of the period of production March 31. The present claim is that it should end at the commencement of such period, i.e. August 31. The advantages of this are not very apparent but the operators point out that there are serious disadvantages because it is in the summer months that their sale agents must be active to obtain contracts for the winter output and that to do so they must be able to quote a price which can only be fixed when the rate of wages to be paid is known. The Board is in agreement with the operators in this regard.

The question of the rate of wages presents much greater difficulties. The contracts provide specifically for the rates of pay for the various occupations in and about the mines but it is sufficient for the purpose of this report to consider only those for the ordinary miners who are taking out the coal. For them there is a double classification, a contract rate and a daily rate. Some are in one class and some in the other. In the contract just expired it is provided that, speaking generally, the contract miners shall receive as a minimum the daily wage, if through no fault of their own, their earnings on the contract basis would fall below it.

During the War the Dominion Government took control of the coal industry as a war measure. It fixed the rate of wages, which it could do because it fixed also the price which consumers must pay for the coal. When that control was removed, and the price of coal had to be determined by competition in the open market, naturally wages had to be adjusted in relation to the price which could be obtained. The matter of the cost of living is something for consideration in fixing wages, and, as the cost of coal is one of the items in the general cost of living, its price should normally keep pace in the general way with the other items in the cost of living.

In considering the variations in the wages

for the past few years in comparison with the cost of living it will be sufficient to refer specifically to the daily wage only. In 1920 the daily wage was \$7.50. In 1922 there had been a substantial decline in the cost of living and the operators proposed a reduction in wages. This was met by a strike which was settled by a continuance of the former scale. Again in 1924 there was a strike to prevent a reduction but this was settled by a reduction, the daily wage being set at \$6.35. In 1925 a further reduction was made, the daily wage being then set at \$5.57. In 1933 this was reduced to \$5, which has been the rate up to the termination of the contract on March 31st last. It appears from the LABOUR GAZETTE that, from 1920 to 1923, there was a substantial decline in the price of essential foodstuffs, followed by a slight increase till 1930 when there was again a substantial decline to 1933, since which time there has been an increase of nearly ten per cent, for all of Canada and nearly fifteen per cent for Alberta. The decrease for the whole period from 1920 to 1933 was about 60 per cent, while the decrease in wages was exactly 33½ per cent. The decrease for the total family budget, however, was not so great, being only about 40 per cent. The figures for 1925 are not available but from 1926 to 1933 the decrease in cost of the essential foodstuffs in Alberta was almost forty per cent and for the total family budget was a little over twenty-six per cent but the reduction in wages made by agreement between the parties was only nine per cent on the daily wage and twelve and a half to fifteen per cent on the contract rate.

The miners now ask for the restoration of the 1932 scale with a further increase of twelve and a half per cent. The operators on their part maintain that they cannot pay wages even on the present scale and break even, to say nothing of receiving any reward for the capital invested. During the hearing one of the Local Unions submitted a brief setting out very ably and forcibly the miners' point of view, which will be apparent from the following quotation, (Ex. 8):—

"The essential contention of our membership is that wages are of necessity due for upward revision on account of the noticeable advance in the price of staple commodities."

\* \* \* \* \*

"In addition to the foregoing the present wage scale, as revised downward since the year 1933, has not brought the expectations of coal operators, that the reduction in wages secured in that year would produce more employment, to realization. Indeed they now confront us with the advice that, after years of successive wage reductions for their employees they are now, by their own declaration, in a position of comparative bankruptcy and, therefore, unable to accede to claims for a wage increase. Whether the position of the coal operators, as outlined by

themselves, is in itself a fact, there is no means of our membership, as employees, knowing. What we are aware of is that in both relatively good and bad years the coal operators have taken up a similar position. They were always on the verge of bankruptcy,—this in either resisting demand for wage increases from an existing low level or in themselves asking for a wage reduction, to justify potential future operation.”

“The operators then rely upon competitive arguments the same arguments used many years ago, to justify wage reductions. Having secured said wage reductions, they find them no solution and must keep declaring the same method as still to be a cure for the ills of the industry. Repetition of declarations that they are aware have not even remotely provided stability in any form. The position, briefly, of the miner is that he is no longer prepared to accept the policy that has already and demonstrably failed and with himself the principal sufferer.”

“Our position, therefore, is that of reversing previous policies and procedure, of wage reductions which have obviously failed to solve any ills. On the latter point, rise in living costs and total inadequacy of miners' earnings we substantiate our organization's request for an increase in wage rates.”

It was emphasized by witness after witness that the arguments of the operators for keeping down wages were always the same, viz., the inability to carry on the industry with a profit otherwise and the expectation by lower wages to reduce the selling price of the coal and so increase the quantity of the sales, which would mean more coal produced, involving more days' labour for the miners and more pay in the aggregate. As the expectations had not been realized to anything like the extent hoped for, the miners have come to doubt the correctness, and perhaps the honesty, of the arguments advanced.

It seems to be implied in the above quotations, and it was frankly admitted on the witness stand, that the capital invested is entitled to some reward, as well as the labour performed but there was clearly indicated in the evidence of the miners not merely an ignorance on the point but also a doubt that the capital was not receiving an adequate share of the returns. Evidence, however, was given before the Board, not merely by the sworn testimony of several of the operators but also by the evidence furnished by actual operations, as shown by the auditor's balance sheets,—which were produced for the Board's inspection,—for the past two years, that proves conclusively that for the past two years the capital invested has received no return whatever and, for some of the mines at least, that condition has existed for even a longer period.

Though the hopes regarding increased sales and increased wages when the last agreement was made were not fully realized, there was in fact a quite appreciable increase in both

respects. A chartered accountant has prepared a summary taken from the books of accounts of seven of the eight mines for the years 1933-4 and 1934-5. For the eighth mine, which had changed hands in the meantime, he was able to give only the returns for the last eight months. For the seven mines, for the first period, the sales were \$1,235,000 and the wages paid to the men and to the Compensation Board \$771,000, or 66½ per cent of the whole. For the same seven mines the value of the sales for the second period, the sale price having been slightly reduced, was \$1,332,000, an increase of nearly \$100,000 or 8 per cent, while the total wages were \$887,000 an increase of \$116,000 or 15 per cent, the percentage of wages to total sales rising to 66½ per cent. But while the total wages increased by \$116,000, the loss show on the whole operations, which was \$11,907 in the first period increased to \$17,053 in the second. But though both years show a substantial loss it does not mean that the actual operating outgo for the year was greater than the income. Quite properly an allowance is made on the debit side for depreciation and depletion. Each year the equipment is becoming less valuable by the amount it depreciates and the mine is becoming less valuable to the extent of the coal that is extracted and allowance must be made for these, as for a sinking fund, before any dividend can be paid on the capital. The amounts properly allowed for these items is in excess of the amount of loss in each year to the amount of approximately \$100,000 which would be entirely wiped out by an increase of ten per cent of the present wage scale if other conditions did not change. To restore the daily wage, as demanded by the miners, to \$5.57, the 1932 rate, with an added 12½ per cent would make it a little over \$6.25 or an increase of more than 25 per cent over the \$5 rate. That would add over \$250,000 to the total wage bill or \$150,000 more than the total income. It is apparent that the mines could not carry on under any such conditions, nor can they carry on indefinitely even under the present conditions.

It is important then to see what the prospects for the future are.

Professor Pitcher, Professor of Mining Engineering in the University of Alberta, who has had many years experience in the management of coal mines in the Province, stated that the condition of the coal industry in the Province is far from healthy.

It has been announced that a British Coal Expert is to be appointed a Royal Commissioner to investigate and report on the coal industry in Alberta in a very short time. In Saskatchewan there was a Royal Commission last year issued to the Honourable Mr. Jus-

tice Turgeon of the Court of Appeal, whose report was published a few months ago. There is one now investigating conditions in British Columbia presided over by a member of its Court of Appeal. It is apparent that conditions have not been considered satisfactory elsewhere in Western Canada.

It appears from statistics quoted in Mr. Justice Turgeon's report that Alberta is estimated to possess 87 per cent of all the coal of Canada; that British Columbia, which comes next, has less than one-fourteenth as much, and Saskatchewan, which follows next, has less than one-seventeenth as much; the rest of Canada, including Nova Scotia, possessing only a little over two per cent of the whole.

The Board has had the advantage of the printed reports of the Provincial Mines Branch for the years 1932 and 1933 and has been given the opportunity of seeing the draft of the report for 1934, which has not yet come from the printers, for which courtesy it desires to express to the Mines Branch its appreciation.

As already mentioned the Drumheller coal is used almost exclusively for domestic heating purposes. There are two other important fields in Alberta producing coal of the same character, Edmonton in the north and Lethbridge in the south. The Drumheller coal has, in consequence, sought its chief market outside of Alberta and has found it mainly in Saskatchewan and Manitoba. In 1932 the total sales from the whole Drumheller area amounted to 1,225,803 tons, almost exactly half of the total sales of Alberta Domestic coal, and of that over 938,000 tons were sold in Saskatchewan and Manitoba. In 1934 the total sales had fallen to 1,017,373 tons and the sales in Saskatchewan and Manitoba to 773,000.

The Saskatchewan coal, which is produced in the southern part of the Province, is a lignite, which 25 years ago was not considered of a very high quality and not till 1911 was more than 200,000 tons a year produced. The Turgeon report points out that war conditions had a beneficial effect by increasing production and by establishing that the coal could be made much more serviceable than had previously been supposed. The production had increased to over 579,000 tons in 1930 and further to over 927,000 tons in 1933. While this increase of 60 per cent in production was taking place the production in British Columbia declined 44.5 per cent and that of Alberta 34 per cent. It is pointed out that in 10 years' time the production of Saskatchewan coal may quite reasonably be expected to amount to 2,000,000 tons, which is little less than the total production of domestic coal in all of Alberta. Any such increase it is apparent will have a very serious

effect on the Drumheller mines because its market is the same as a large part of theirs. The outlook is certainly a rather gloomy one but though the situation is not a hopeful one it is perhaps not hopeless. There is a ray of hope to be found in a paragraph of the Turgeon report which states:—

"The situation in Saskatchewan is such today that nearly all the large mines are operating at a loss, and that action must be taken, through government intervention if necessary, so to improve conditions as to enable these mines to continue in business upon a basis which shall be fair, not only to the mine owners, but to their employees and to the public. The closing down of these mines, or of a number of them, would injure the cause of labour and would soon work out detrimentally to the consuming public. So long as this misfortune can be avoided by reasonable means, such means should be resorted to."

It would seem that if the coal industry is to survive the price of coal must rise and it should in conformity with other increased prices. If it does not it would seem that as suggested there must be Government assistance in some form.

It appears from the Dominion Statistics that the prices of Drumheller coal have fallen steadily from \$4.13 in 1922 to \$2.69 in 1933. The Board was furnished with confidential information from some of the mines from which it appeared that there was a further decrease in 1934-5 to as low a price as \$2.48, 45 cents below the price of 1932. If the price could be raised by even 25 cents a ton it would add 10 per cent to the revenue from sales or \$133,000 dollars a year if the sales could be kept at the same volume. Many letters were produced from agents and dealers in Manitoba and Saskatchewan warning that a drop in sales would almost certainly follow on an increase in price and it seems clear that an increase in price could not be effectively passed on to the consumers unless the Saskatchewan coal and perhaps other fuels such as wood, which is being somewhat extensively used in Manitoba, oil, etc., made a corresponding increase.

The coal industry has had its vicissitudes in other countries and in other times. Early in this century in New South Wales a new coal field having been opened, and competition becoming injurious to the industry, the operators got together and made agreements to regulate the industry. It was sought to have the agreements declared illegal as in restraint of trade and as prohibited by certain Statutes. The case reached the Privy Council and is reported as Attorney General of Australia v. Adelaide Steamship Co. (1914) 83 L. J. P.C. 84. Some of the remarks in the judgment of the P.C. quoted by Mr. Justice

Turgeon in his report seem quite apt for the purpose of this report. It is said: (p. 99).

"It can never, in their Lordships' opinion, be of real benefit to the consumers of coal that colliery proprietors should carry on their business at a loss, or that any profit which they make should depend on the miners' wages being reduced to a minimum. Where these conditions prevail, the less remunerative collieries will be closed, there will be great loss of capital, miners will be thrown out of employment, less coal will be produced, and prices will consequently rise until it becomes possible to re-open the closed collieries or open other seams. The consumers of coal will lose in the long run if the colliery proprietors do not make fair profits or the miners do not receive fair wages. There is in this respect a solidarity of interest between all members of the public. The Crown therefore cannot, in their Lordships' opinion, rely on the mere intention to raise prices as proving an intention to injure the public. To prove an intention to injure the public by raising prices the intention to charge excessive or unreasonable prices must be apparent."

In failure of any concerted action by the parties concerned if the Dominion Government were to consider the situation as of such grave consequence as to constitute a menace to the well being of Canada unless treated as an emergency as it was during the war then prices could be made to harmonize with wages and vice versa, but any action by a Provincial Government by itself alone can exercise no control over a market outside its boundaries.

This then being the situation of the industry and the prospects of the operators it is necessary to consider shortly the situation and condition of the miners.

A statement of all the men employed with the wages earned for one of the mines for both years April 1, 1933, to March 31, 1934, and April 1, 1934, to March 31, 1935, was put in evidence and it shows clearly the seriousness of the situation as it affects the miners.

As already mentioned there is little production during the warm weather. The Mines Branch 1933 report shows that for that year a little less than 3 per cent of the year's production in the Drumheller field was mined in the months of May, June and July and including April and August less than 9 per cent. But even during the 7 months in which 91 per cent of the coal is mined the mine in question hoisted coal for only 98 days in 1933-34 or an average of 14 days a month. The contract miners made very good wages, the average of the 122 men employed being \$7.65 a day but again though the mine worked for 98 days the average time worked by the miners was only 60½ days. The 64 Company men most of whom received the daily wage of \$5 had a higher average of 84.6 days. But that only represented \$423 for the year's wages while the

average of the contract miners was only a little more, being about \$460, from which certain deductions are made for powder and other supplies which reduce it to approximately the same as that for the Company men.

The next year there were fewer men and though the average contract wage was not quite so high they had more days' work and consequently earned more wages having an average for the contract men of 86.5 days work at an average wage of \$7.20 gross and \$6.80 net with a total earning of a little over \$620 gross or \$588 net. The average time for the Company men was 106 days which gave average earnings for the year of \$530.

No miner is permitted by law to be underground more than 8 hours for his day's work. This means that in many cases, and it is so in the mine for which the wages are given, the miner works only about 7 hours.

Even for such a hazardous occupation as mining is, there would not be ground for much complaint as regards the wages received for the time worked. No employer can be expected to pay high wages and continue to pay them whether the employee works or not though no doubt in occupations which do not give constant employment a higher wage is to be expected. If the miners could find other employment for the five months when there is almost no work in the mines the problem would be solved but under present conditions there is no such employment to be found and many of the miners with families are on relief supported at public expense during the off season.

The same problem presents itself in the Saskatchewan field where the wages are lower than in Drumheller, for the Turgeon report states that "the general attitude in respect to wages is not that the schedules of wages are too low but that the number of working days in the year are too few to allow them to make a fair annual wage."

It is difficult to see, however, how the number of working days can be substantially increased, by reason of the limit of the market and of the fact that there is little need for the coal in summer. An attempt has been made to reach the Eastern market which, if it could be successful, would greatly increase the output and the Dominion Government for several years has granted a subvention by bearing part of the cost of transportation, but though the market would be a large one, less than half of the coal used in all Canada being produced in Canadian Mines, yet the cost of transportation is so heavy as to make it difficult to sell at a price that can compete with imported coal.

Only 30,000 tons of Drumheller coal were sold in Ontario in 1934 and only about 2,000 tons from all other mines producing domestic coal notwithstanding the Government assistance. One can see too that an increased market will hardly solve the essential problem. It may ameliorate the condition to some extent if the price obtained for the coal is sufficient to make the production profitable to the operators, by enabling them to pay somewhat higher wages or more wages by working more days in the producing season without increasing the number of men employed, but it will not furnish employment for the men during the five months when little coal is being mined.

The real problem is that of finding employment for the miners during the off season.

Two local merchants were called to give evidence as to the actual increase, in Drumheller, in the cost of groceries and meats. The latter were shown to have had a very large increase in price since 1933, in few cases being less than 25 per cent and in some cases as high as 50 per cent and occasionally higher. In groceries and vegetables the increase had not been nearly as high, one of the chief items showing a substantial increase being potatoes which had increased from \$1 to \$1.65 a bag. It appeared that these potatoes were imported from Lethbridge. There would appear to be little excuse for the necessity of importing into Drumheller vegetables which can be produced there when hundreds of miners are without employment during the whole period during which they would be grown. Not merely should every miner be able to produce enough vegetables for the use of his family but there could easily be raised a sufficient surplus to meet the requirements of the remainder of the population. In many cases the miners have sufficient garden space with their homes but there is ample unused land available near at hand if they have not. They could in this way not only save the money otherwise used to purchase vegetables for their own use but might receive some, perhaps substantial, assistance from a surplus which they could use to satisfy other needs. Such occupation would also help to avoid the restlessness and anxiety which are the usual accompaniments of unemployment.

It may seem that this report has been travelling somewhat afield but it has been thought that a partial picture of the general situation would assist in furnishing a perspective of the problem with which the Board is immediately concerned.

Moreover Section 26 of the Act under which this Board functions provides that it shall take steps "for the purpose of fully and carefully ascertaining all the facts and circumstances, and shall also set forth such facts and

circumstances, and its findings therefrom, including the cause of the dispute and the Board's recommendation for the settlement of the dispute according to the merits and substantial justice of the case."

It seems to the Board that under present conditions the time is not opportune for a change in wages. The depression which has existed for several years in a very marked degree shows some signs of lifting. So much so that the Dominion Government which several years ago cut all its employees' remuneration by 10 per cent has just restored one-half of the reduction. There has been much legislation, both Provincial and Dominion, looking to the amelioration of social conditions, including the matter of unemployment and as already indicated there is to be an expert inquiry into the general coal problem of the Province in the near future.

In the argument submitted by Mr. Patrick, on behalf of the operators, after all the evidence had been received, he states that while of opinion that the evidence justifies a reduction, yet, in view of the conditions, and as a conciliatory offer in order to preserve harmony and good feeling, the operators are prepared to continue for the time being the wage scale presently in effect. The Board considers this attitude one highly to be commended as showing a proper spirit of goodwill towards their employees. Indeed the Board was particularly pleased to find during the inquiry the state of good feeling that exists generally between the operators and the miners which augurs well for a solution of the difficulties and a settlement of the present dispute when each side can view with sympathy and the knowledge that has been derived from the Board's investigation the attitude and situation of the other.

No doubt Mr. Patrick, when referring to the present wage scale, is considering nominal wages but nominal wages and real wages are not necessarily the same. Five dollars is worth to the miner only what \$5 will buy which latter is the real wage. As already pointed out it will take more than \$5.50 in currency to procure now of the essentials of living what \$5 would procure when that figure was set as the daily wage of the miner, and as appears from what has already been stated the cost of living has always been a factor in fixing the wage scale.

Before this Board was appointed the parties referred the dispute to Mr. F. E. Harrison, the Western Representative, of the Department of Labour, who after investigation made the following proposals for a settlement.

1. That the general clauses of the former contract be adopted without change.

2. That all contract wage rates and dead work should be increased seven per centum.
3. That the day wage rates should be advanced to conform with the attached schedule.
4. That the rate in the clause of the present contract relating to the payment for handling of bone should be set at 6·7 cents.
5. That the inequalities be taken up for mutual adjustment with representatives of each party on the basis of no reduction in the earning power of the men nor increase in the cost of production to the operator.

In the attached schedule referred to the day rate wages are set out in detail for the various occupations and the proposed rates provide for increase of from 5 per cent to 8 per cent. The rate proposed for bone in paragraph 4 is a reduction.

When Mr. Harrison made these proposals he apparently knew, in a general way only, the financial results of the operations of the mines which have now been made known to the Board in particularity and which show that the mines are at present operating at a loss each year, there being spent for wages and other expenses a part, at least, of what the operators are justly entitled to set aside for depreciation and depletion and which, if not placed in reserve, may be used for necessary replacement and meeting other liabilities. Any increase beyond the rate at present paid will mean a further inroad on that fund and it can easily be seen that the operators' view naturally is that that would be unjust to them. On the other hand the present wages measured in money are considerably lower than when they were set and that is a circumstance which has always been taken into consideration when wages are being adjusted and the miners quite naturally feel that it is unfair to them not to consider and allow for it now. "Substantial Justice" which the Act calls for would seem to lie between the two views and while recognizing the need to take into consideration the increased cost of living also realizing that the whole burden should not be thrown on the industry which is already carrying on at a loss. There are other reasons too why the miners should not receive full compensation for the increased cost of living besides the fact that they should bear their share of the burden for when reductions have been made in the past they have never been equal to the whole of the decrease in the cost of living and as has been already suggested the miners can if they will by their own efforts help to

some extent in minimizing the effect of the increased living costs even if they cannot obtain independent remunerative employment during the off season.

It would seem that an increase in the monetary rate of wages by 5 per cent would be as much as could reasonably be expected and that can only be asked for from the operators by way of appeal to their generosity in these distressful times through which if we are to pass safely those who can help must aid those who need help for it will absorb nearly half of the amount that they are entitled to set aside for depreciation and depletion unless there can be an increase in price or in output.

The recommendation would, therefore, be that the proposals of Mr. Harrison be accepted with the exception of paragraphs 2 and 3 and 4 in lieu of which the increase of wages should be a level one of 5 per cent.

It is realized that this recommendation can be accepted by both parties only if approached in a spirit of give and take but it is the earnest hope of the Board that its efforts to assist in a settlement of the dispute may not prove in vain but that on the contrary it may have made itself a real medium of conciliation.

It is clear that any settlement under present conditions cannot be of a permanent character and instead of any new agreement being for a definite period it is recommended that no time be specified but that instead it be provided that either party may terminate it on the 31st of March in any year by giving at least one month's previous notice, if on behalf of the employers, to the office of the U.M.W.A. District 18, if on behalf of the employees to the General Manager of one of the mines parties to the agreement.

Before concluding the report it is desired to express the Board's appreciation of the courtesy and assistance it has received from all parties concerned, both operators and miners, and particularly would it extend its thanks and congratulations to Mr. Levitt and Mr. Patrick for the able, fair, frank and honest manner in which the cases for the miners and the operators respectively were presented.

Respectfully submitted,

(Sgd.) HORACE HARVEY,

*Chairman.*

CALGARY, August 9, 1935.

I concur in the principle of an increase in wages as found by the learned chairman on the basis of the increased cost of living since 1933, when the agreement which expired on March 31, 1935, was negotiated, but find myself unable to agree with 5 per cent, it

being inadequate to meet this change in living costs. I believe that, in equity, miners are entitled to the 1932 wage scale and that the operators should adjust their affairs to meet that scale. But, on the basis of a compromise, I feel that the least that should be granted the mine workers at this time are the proposals of Mr. F. E. Harrison, western representative of the Department of Labour, and already enumerated in this report but as the Chairman finds himself unable to recommend a further increase than 5 per cent, in order that there may be an effective report of the Board I concur in the recommendation signed by him.

(Sgd.) A. J. MORRISON,  
*Representative of the Employees.*

### Minority Report

To the Honourable,

The Minister of Labour.

As I disagree with the majority of the Board of Conciliation and Investigation on the Question of increasing wages, I desire particularly to associate myself with the expression of appreciation to all parties concerned contained in the concluding paragraph of the majority report.

I concur in the decision of the Board disallowing all the claims other than the claim for increased wages. As the reasons which influenced the Board to disallow these items have been clearly set out in the majority report, it will be unnecessary to refer further to them and there remains for consideration only the claim for an increase in wages.

As pointed out in the majority report the increase in wages asked for, if granted, would give the miners a larger sum than the total amount realized for the sales of coal, without leaving anything for such items as taxes, office salaries, royalties, selling costs, repairs and maintenance of plant and machinery, and such like expenses.

An application leading to such a result could not have been sponsored by a responsible Trade union, had the facts been known beforehand. Indeed, from the opening brief presented to us by Mr. Livett, President of the U.M.W.A. District 18, it is clear that when bringing the application he was under the impression that the capital invested in the eight mines concerned was being remunerated not only during the winter months, when the mines were working, but during the summer months as well. His brief goes on to say that omitting this item "there will remain over a very large annual fund out of which may be met the cost of the living wage asked by the mine workers and a shorter working day as a means to greater regularity of employment."

This belief in a "Large Annual Fund" available to pay a return on the capital invested in the mines concerned in the present application appears all through the evidence presented on behalf of the miners, more than one of whom admitted that the capital invested was entitled to a fair return.

The application as thus presented completely broke down, when uncontradicted evidence was produced, that not only had the capital invested received no return for a number of years past, that there was no such "annual fund" as Mr. Levitt had alleged to have existed, but that on the contrary there had been a large deficit in the actual operating expenses of these eight mines during the two years since 1933 when the last adjustment of wages took place.

Every fact set out in the Report of the majority of the Board points forcibly to the conclusion that wages should not be increased, if indeed, they should not be reduced. It is only by limiting our enquiry to a period between 1933 and 1935 and stressing a slight increase in the cost of living during these two years and by suggesting that wages which were real in 1933 became consequentially and correspondingly nominal in 1935, that justification is sought for the increase in the wage scale which the majority Report recommends.

This raises three matters for consideration:

1. Has there in fact been any, and if so what, increase in the cost of living to justify an increase in wages.

2. Even if living costs have increased, are these eight mining Companies in a financial position to bear any increases in their pay rolls.

3. Is there any hope of future improved conditions in the coal industry which would justify the Board in recommending an increased wage burden during the season now opening:—

As to 1 above, the issues of the LABOUR GAZETTE for May and June, 1935, give us a complete picture of the cost of living, from the pre-war period April, 1914, to the present year and in the following table is set out such cost of living at all appropriate dates, both for the Dominion of Canada and for the Province of Alberta and also the changes in wages at these mines during the period covered.

As the miners have explained that their wages at present are spent chiefly on food, the figures taken from the LABOUR GAZETTE are on the food basis.

The wage figures are based on the day wage as it may be accepted that the wages of contract miners varied from time to time in approximately the same proportion.

Year	Weekly cost of living based on 29 staple foods.— <i>Labour Gazette</i> , May, 1935, pages 464 and 465 and <i>Labour Gazette</i> , June, 1935, page 588		Miners' wages Day basis
	Dominion	Province of Alberta	
	\$ cts.	\$ cts.	\$ cts.
1909-1911.....			
April.....	7 51	7 99	3 00
1914.....			3 30
1920.....	16 92		7 50
1922.....	10 26	9 03	7 50 after a strike.
1924.....	Almost the same as in 1922.		6 35 after a six months' strike.
1925.....	Very slightly higher than in 1926 ( <i>Labour Gazette</i> , June, 1935.)		5 57 continuing until 1933.
1926.....	11 36	10 56	
1930.....	11 24	11 49	
1933.....	6 83	6 43	5 00
1935.....	7 50	7 35	

From this table it will be seen that the food cost of living, for a family of five in the Dominion of Canada, for one week, was \$7.51 in April, 1914, and had been reduced to \$7.50 in April, 1935, but taking the Province of Alberta, the cost of living had been reduced from \$7.99 in April, 1914, to \$7.35 in April, 1935.

During this period day wages, which were \$3.30 per day in April, 1914, gradually went up to \$7.50 per day at the peak period of 1920, and have since come down to only \$5 per day. The miners are getting now \$5 per day as against \$3.30 per day in 1914, while they have to pay only \$7.35 per week for food for a family of five, as against \$7.99 in the pre-war period.

Coming to later periods, in June, 1920, when the day wage had been increased to \$7.50, the weekly cost of food was almost \$17 as against \$7.35 now and if the wages were to be adjusted downwards to correspond to this reduction in living cost, they would to-day be less than \$3.50 per day, instead of the \$5 which the miners are receiving.

In 1925, when wages were fixed at \$5.57, the food cost was about one and a half times the pre-war and also the 1935 figure. In other words, if the cost of living is the criterion, the wages which from 1925 to 1933 were \$5.57 per day, should be reduced by one-third, or to the daily wage rate of \$3.70.

Throughout these 20 years the attitude of the miners and their union on this question of cost of living has been entirely inconsistent. From 1914 to 1920, when the cost of living was increasing, that fact was strenuously urged as justifying corresponding increases in wages. Such increases were invariably forthcoming and were both justifiable and rendered possible by the fact that

the Government of the day had power during those war years, to correspondingly increase the price of coal and the coal consumers were financially able to bear such increases.

But immediately reductions in the cost of living commenced to occur, the miners and their advisers repudiated the principle they had previously fought for, and strenuously opposed any reduction in wages based on the reduced cost of living.

In this connection we find, as set out in the majority report, that in 1922, the miners organized a successful strike to prevent any reduction in wages, although weekly cost of living had come down from \$16.92 to \$10.26 in the period from June, 1920, to April, 1922.

In 1924, when the cost of living remained approximately as in 1922 and notwithstanding that in the interval the sales of Drumheller coal had fallen by nearly 25 per cent, the men again went on strike to prevent a reduction in wages corresponding to the decreased cost of living, and continued this strike over a period of about six months, until the position of these Companies was so weakened that they were forced to agree to a wage scale which bore only a remote relationship to the reduction which had taken place in the cost of living.

The further small reduction in wages agreed to in 1925 still left the wage scale far above any figure which could have been justified on the cost of living basis.

The 1925 wages continued until 1933 when the men again refused to accept the principle that wages should be decreased in accordance with the reduction in the cost of living. As appears from the majority report of this Board the reduction in wages agreed to by the men in 1933 was only 9 per cent, although the decrease in the cost of essential foodstuffs

since 1926 was almost 40 per cent and the total decrease in the family budget was over 26 per cent. The LABOUR GAZETTE for June, 1935, showing the 1925 figures, demonstrate that the decrease in the cost of living since 1925 was even greater than the majority report states.

At Board of Inquiry held in 1932, when these mines were pressing for a reduction in wages based on reduced cost of living, which was then about 30 per cent below 1925, the principle of accepting the altered cost of living as a basis for wage reduction was rejected by my colleague on the present board, Mr. Morrison.

It would appear, therefore, that the attitude of the miners has been consistent only in one particular, to accept alterations in cost of living as a basis for a change of wages only when an increased wage scale could be asked for on this ground, but to repudiate the principle entirely, even to the extent of a six months strike, when a reduction in the cost of living would call for a corresponding wage reduction.

But even if the principle were accepted, and the period limited to the years 1933 to 1935, as is suggested, increases in cost of living would not justify the increase now recommended. The LABOUR GAZETTE of May, 1935, shows the total weekly cost of a family budget of five, including food, fuel, light, rent, etc., to be

In April, 1933. . . . . \$ 15 74

In April, 1935. . . . . 15 97

The increase is thus 23 cents per week or about 3 cents per day and affords no justification for adding 25 cents per day to the daily wage scale, and up to almost 45 cents per day in the case of miners doing contract work.

2. The next question which arises is whether these eight companies could bear any increase in wages, even if such were justifiable on the merits.

One of the points strenuously pressed by the miners and their representatives was that the operators had during later years, strongly represented that the industry could not carry on under the wage scale the miners were insisting on and that the industry itself was being driven into bankruptcy. Doubt was expressed by the miners as to the truthfulness of these warnings and almost as to the honesty of the arguments that were advanced.

How true these warnings were, and how inadequate the 1933 reduction to \$5 a day, has since proved are forcibly corroborated by the financial statements of the eight companies concerned, for the two year period since these warnings and statements were made.

As appears in the majority report, it was implied in the brief from the local unions set out as Exhibit 8; it was admitted by the miners' representatives on the witness stand, and also in Mr. Levitt's opening brief, that the capital invested in these mines was entitled to some return.

For the past two years, as indeed for a considerable time previously, not only was no return possible on the capital invested in any of these eight mines owing to the scale of wages in existence; but the actual position was so much worse that they are short by many thousands of dollars of their actual operating expenses.

To present the picture accurately, it is better to take the figures from the evidence of the Chartered Accountant who presented them to us in the form of a consolidated profit and loss account. From his figures it appears that taking the expenses of these mines, including the present wage scales and making the allowances for depletion and depreciation, which the law of Canada authorizes and Chartered Accountants have established as fair and just, the losses of these eight mines during the two years from 1933 to 1935 have been over \$125,000. That figure only includes an eight months period for one of the mines concerned and if figures for that mine are included for the two year period the losses for the two years exceed \$146,000.

These figures include items for depletion and depreciation. The item for depletion arises because at the end of a certain period the coal granted by the leases will have been used up and the capital invested in those leases will have disappeared. In many cases the Companies have paid large sums to various persons for their leases but as in some cases leases have been given direct from the Government merely on a rental basis, it is well to point out that even if the entire allowance for depletion were omitted from the accounts, these eight mining Companies would still show a large financial out of pocket loss on the past two year's operations. As much the greater loss occurred during the second year, it proves that the position of the Companies became substantially worse last year, when compared to the year before.

When one comes to the item for allowance for depreciation the position is entirely different. Once the value of any piece of machinery or plant has been written off under this depreciation item no further allowance for depreciation can be made, and the depreciation written off year by year is an actual operating outgoing, whether it be new money required to replace a piece of plant or machinery

during the year or merely as the loss for the year of a percentage of capital invested in plant and machinery.

The majority report admits the substantial losses in the actual operating of these mines in the two years referred to but goes on to say "though both years show substantial losses it does not mean that the actual operating outgo for the year was greater than the income."

So far as depletion is concerned this statement may be correct as already pointed out, but with regard to depreciation the amount charged is just as much an outgoing as the miner's wages for either the money is paid out to replace worn out plant and machinery, or capital invested in the plant and machinery has disappeared to that extent. In fact in the case of one of the mines, whose depreciation account the Board looked into with some care, the amount expended last year on new plant, etc., to replace that which had become worn out or obsolete, was more than double the figure shown for depreciation in the accounts. We arrive then, at this extraordinary situation that although both the miners and their representatives admit that the capital invested in these mines should get something, which cannot be done under the present wage scale, and although the Board finds that large losses are being incurred which in the course of a short time, if continued, must wipe out the capital itself, these eight Companies are now being recommended to consent to pay some \$45,000 for increased wages during the coming season, a recommendation which, if they accept it, cannot do otherwise than speed up the extermination with which they are threatened.

To enable these eight mines to break even, they must somehow reduce their working expenses by about \$70,000 per year. Of these working expenses, as appears by the majority report, over 66 per cent is for wages, but in fact as appears by the evidence of the accountant who appeared before us, when salaries and Workmen's Compensation, which is paid for the benefit of the miners, are taken into consideration, the percentage of wages and salaries was over 70 per cent of the price received for the coal during the season 1933-34 and almost 72 per cent of the total for the year 1934-35. The witnesses for the operators tell us that other outgoings, including expenditures on maintenance and upkeep, have been cut to the minimum and the only source from which the present losses can be made good is out of money now being disbursed for wages and salaries.

Assuming these mines can maintain both prices and tonnage during the coming season,

a reduction in the present wage scale of approximately 7½ per cent would be necessary to enable them to break even, while to give effect to the further admission of the men that the capital invested is entitled to some return (put by one of the miners' witnesses at 3 per cent) at least a further 5 per cent reduction in the wage scale would be required.

It is in the face of facts such as these that the eight Companies, who in the interests of peace have gone so far as to say they would carry on under their present wage scale for another year, and incur a further \$70,000 loss similar to that of last year, are now recommended to bear an additional loss of \$45,000 which they must do if the majority report of this Board giving this increase in wages is to become effective.

If this additional \$45,000 could be secured for the men, some justification for the impoverishment of the operators might be urged, but in my view the men will lose considerably more than this sum owing to loss in the number of days work which will be available. Divided amongst the men employed, this \$45,000 will give an additional \$30 per man during the entire season, assuming the number of days work could be kept up to the last season's standard. This represents about four or five days pay on the average.

Now an exhibit filed on behalf of the operators showed that during the past two years there had been an increase of about 9 per cent in the number of days worked by these eight mines, and the report of the majority of the Board shows that during the past season there was an increase of \$116,000 or 15 per cent in the total wages paid to miners as compared with the previous season.

There is no doubt this increase in work was the result of the greater tonnage of coal which these eight companies were able to sell, owing to the reduced coal prices resulting from the lowering of wages in 1933.

It necessarily follows that the proposed \$45,000 increase in costs in these eight mines must result in decreased tonnage if competing fields maintain their present wage scales and prices.

Assuming that only the extra tonnage secured last season is lost, a very optimistic assumption in my opinion, it would mean that the men will get \$116,000 less in wages during the season represented by days work lost and only \$45,000 of this will come back to them in the shape of wage increase recommended.

If this be even approximately a true picture next season will see a loss of at least \$70,000 in the wages distributed by these eight mines.

I do not feel one whit less interested in the welfare of these miners than any member of the Board, and for this reason cannot help uttering a warning against the decision which must reduce total wages as above shown, which may put some or all of these mines out of existence, and which may deprive the miners of work which at present is giving them from \$5 to \$8 per day, when the Board is unable to suggest any alternative employment for them or any hope other than the pittance of about \$1 per day which can be got when they go on relief.

3. It remains to consider whether there are any circumstances which would hold out a hope of betterment for the coming year sufficient to justify the Board in recommending the owners to take the risk of increased wage outgoings.

The majority of the Board find that these eight mines "cannot carry on indefinitely even under the present conditions." Are conditions then, likely to improve in the coal industry in Drumheller or even to remain during the coming season as good as they were last year?

The evidence of Professor Pitcher, who is entirely independent of the struggles of the coal industry, gave the Board an impressive, if very gloomy picture. He gave as his opinion that the coal industry of the world is sick and "of Canada is very sick" and stated he saw only a very gloomy future. He stated that in Alberta there is development and equipment enough to enable 20 of the mines to supply all requirements instead of the 270 now existing, but stated further that if you amalgamated so as to let 20 do the work you would have to put out of work permanently, many of the miners and that it would be a boomerang to labour. He further stated that an increase in wages in Drumheller would not likely result in an increase in wages in the Estevan fields.

As pointed out in the majority report the chief competitors of the Drumheller field are Edmonton in the North, Lethbridge in the South and the Estevan mines in Saskatchewan. There is in addition steadily increasing competition from the mines in Sheerness.

As in consequence of the scarcity of money, the tendency is towards reduced prices and lower priced coal, the most serious competitors are the Edmonton, Estevan and Sheerness fields.

Throughout Northern Alberta and parts of Saskatchewan the competition from Edmonton coal, is intense, and it is difficult for the Drumheller field to face more than a narrow spread in price as against the Edmonton coal. Yet what do we find? That the very trade union which negotiated an agreement two years ago with these eight mines on a basis

of \$5 daily, negotiated a year later an agreement at \$4 per day for the Edmonton field, thus leaving Drumheller in the position of having to pay 25 per cent higher wages than the Edmonton field. The union now seeks to increase that injustice by means of the present application for a still greater differential.

It will scarcely be suggested that the miner in Edmonton needs less food, or can buy cheaper than a miner similarly employed in the Drumheller fields and therefore this Edmonton wage agreement must mean that in the opinion of the union \$4 a day represents a fair day's wage for the miners or alternatively that it was all that could be fairly got out of the coal. Either alternative is fatal to the argument for an increase in Drumheller wages. If the \$4 a day is a fair wage in Edmonton, it is a fair wage in Drumheller. If, on the other hand, it is accepted as being all that can be got out of the Edmonton coal it is equally clear that less than \$5 per day is all that can be got out of Drumheller coal, as is clearly established by the results of the last two years' working, and no suggestion has been made from any source that it is possible at present to increase Drumheller prices.

With reference to the Estevan field, the wages are still lower than they are in the Edmonton field. As pointed out by Professor Pitcher an increase in Drumheller wages would not increase wages in the Estevan field. The mines which employ miners to any large extent in the Estevan field are subject to intense competition from the steam shovel mining company which operates there, and which can produce coal more cheaply than the mines working with human labour, and until there is some legislation in Saskatchewan fixing the price at which coal must be sold by the mines operating steam shovel systems, wages cannot be increased in the other Estevan mines without closing them down and putting the men at present employed there out of work.

So far from Drumheller being able to increase prices as against the Estevan mines, the position is exactly the opposite. As pointed out in the majority report the Estevan mines increased their production by practically 350,000 tons between 1930 and 1933 as appears from the report of the Hon. Mr. Justice Turgeon.

This in itself is sufficiently alarming, but witnesses who gave evidence before Mr. Justice Turgeon expected this increase to continue at the rate of about 100,000 tons per year. The estimate of 100,000 tons annual increase was based on prices then in existence and it can well be accepted that this estimated increase, practically every ton of which must be taken away from the Alberta mines,

will be much greater if the price of Drumheller coal has to be increased by 20 cents or 25 cents per ton. Every increase in the price of Drumheller coal enlarges to a corresponding extent the natural market for Estevan coal and decreases the possibility of selling Alberta coal in competition.

The Sheerness field, which has recently adopted the steam shovel method, of mining coal, increased its production from 24,000 tons in 1933 to 64,000 tons in 1934, an increase of over 150 per cent and so far as can be foreseen will be responsible for intensified competition in the coming season.

Competition such as this would be bad enough, but it by no means completes the picture. As Professor Pitcher points out in his evidence, power plants now get about 35 per cent more efficiency owing to new machinery, a situation which he says enables substitute and lower priced fuels to improve their position. In addition he refers us to the use of sawdust as a fuel at Vancouver and the use of gas in large centres such as Calgary and Edmonton. In connection with this latter source of competition, even during the time the Board was sitting there were announcements in the newspapers of new gas wells both at Lloydminster and Vegreville, which will eliminate these towns as markets for Drumheller coal.

Additional to this outside competition there are nine mines in the Drumheller area, who are not parties to the present application, whose employees are not members of the union which makes this application, and whose wages or selling prices cannot be controlled in any way, by the eight mines now being dealt with.

To try and meet competition the Drumheller operators have made reductions in the price of their coal far in excess of the reductions made in the miners' wage scale.

As appears by the majority report the price of coal was reduced from \$4.13 in 1922 to \$2.69 in 1933, but even since 1932 the price has been reduced from \$2.93 to approximately \$2.48. This has been done not chiefly on account of the competition within the Drumheller field itself but because of the outside competition above referred to, and this outside competition cannot be controlled or affected even by the entire seventeen mines operating in Drumheller, much less by the eight mines who are subject to this application.

In the report of the majority of the Board the hope is held out that if the price could be raised even 25 cents a ton it will give an increased revenue of about \$133,000 a year.

It cannot be suggested for a moment that slack or small coal would bear this or indeed

any increase in the price and to raise the additional revenue of \$133,000 per year which the majority of the board contemplate would mean increasing the cost of Lump coal, which is approximately 60 per cent of the entire output, by about 45 cents a ton, and this, in the opinion of anyone who understands the Alberta coal industry, would mean such a reduction in the output of these eight mines as would put most of their men out of work at once, and themselves out of business during the season: The increase in wages of 5 per cent recommended by the majority of the Board must similarly come out of the price of Lump coal. To anyone acquainted with the industry it is well known that the price of small coal, Stove, Nut, Pea or Slack, etc. cannot be increased. Putting the increase on the Lump coal will mean an increase of more than 20 cents per ton and I personally have no doubt whatever, that any such increase in their selling price, must result in a further large decrease in the output of coal from the Drumheller field and a decrease in the number of days the men can work, and in the total wages they will receive.

A further outlay will be forced on these mines by the provisions of the Employment Insurance Act recently passed: These being the facts and this Board being enjoined by the Act to make its recommendation according to the merits and substantial justice of the case, the Board in my opinion can come to no other conclusion than that set out in the majority report that "the time is not opportune for a change in wages." With that statement I fully agree.

Notwithstanding this statement the majority of the Board have decided to recommend the increase of 5 per cent referred to. Two extraneous factors are relied on to justify the increase. One of these factors is that Mr. F. E. Harrison, Western representative of the department of Labour, made suggestions for an increase. It is obvious however, that Mr. Harrison did not have the evidence now before us nor could he have known at the time he made his suggestions that these mines had operated for the previous two years at such an enormous loss, because from Mr. Levitt's opening brief it is clear that even he, who was engaged in the negotiations throughout, remained until the hearing of this case under the impression that instead of a loss, there was some large annual profit fund out of which increased wages could be paid.

The second factor relied on is that an increase of 5 per cent could be asked for from the operators "by way of appealing to their generosity in these distressful times, through which if we are to pass safely, those who can help must aid those who need help."

The great fallacy underlying this appeal is the assumption that those who operate these eight mines and the unfortunate people who have invested their money in them, are in a position to carry the men who are employed in them, whereas many of the people concerned may be in greater distress than the miners.

If general legislation were possible, either to regulate the industry in the Provinces in which these mines have their markets or in the Dominion of Canada in general, it would be perfectly fair to say that miners should have increased wages and that the price of coal should be increased accordingly, though how far this would be fair to the consumer who throughout this enquiry has been entirely left out of consideration, I cannot say. It is one thing to be generous out of one's own resources, but to endeavour to coerce these

eight mines into contributing over \$45,000 this season in the name of generosity when no such increase can be justified by the facts or on any business basis, is, in my opinion, unfair to the mines concerned, will result in actual loss to the miners and is likely to raise hopes which cannot be fulfilled over any extended period.

For these reasons I think the most that the men can expect is the fair and generous offer made by the operators at the close of the proceedings to bear the loss of leaving the wage scale as it at present stands during the coming season.

Respectfully submitted,

L. R. LIPSETT,

*Representative of Employers.*

August 9, 1935.

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1935

THE following table shows the number of disputes, workers involved and time loss for August, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Aug., 1935.....	20	7,573	49,429
*July, 1935.....	25	7,355	67,888
Aug., 1934.....	31	13,263	75,660

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as 'minor disputes.'

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The increase in the number of workers involved in strikes and lockouts, while the number of disputes and the time loss showed decreases, was due to the occurrence of three disputes involving relatively large numbers of employees for very short periods, namely women's cloak and suit workers at Montreal, P.Q., cotton factory workers at Three Rivers, P.Q., and coal miners at Cumberland, in Van-

couver Island. The strike of longshoremen at Vancouver and the sympathetic strike of various water transportation classes of workers at Vancouver and other ports accounted for most of the time loss for the month, as in July. In August, 1934, two-thirds of the time loss was due to two strikes of men's clothing factory workers and dressmakers in Montreal, P.Q., while fourteen other disputes involved from one hundred to eight hundred workers and caused most of the remaining time loss and the other disputes affected small numbers of workers.

Eleven disputes, involving 1,936 workers, were carried over from July, and nine disputes commenced during August. Of these twenty disputes eleven terminated during the month, five being in favour of the employers involved, one ending in favour of the workers involved, compromise settlements being reached in four cases, while the result of one is recorded as indefinite. At the end of August, therefore, there were nine disputes in progress recorded as strikes or lockouts, namely: two disputes of women's clothing factory workers in Montreal, P.Q.; two disputes of compositors in Calgary, Alta.; compositors, Winnipeg, Man.; furniture factory workers, Toronto, Ont.; longshoremen, Powell River, B.C.; longshoremen, Vancouver, B.C.; and water transport workers, Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available

as to three such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute, involving 32 employees in a shingle mill at New Westminster, B.C., for twenty minutes on August 9, occurred. The demand of the employees for an increase in piece rates for work on shingles for shipment to the United States was granted.

A minor dispute involving men loading a boat occurred at Amherstburg, Ont., on August 9. Unemployed workmen objected when a steamship company brought longshoremen from Windsor to load the boat and prevented them from working. As a result of conciliation by municipal officials, it was arranged that the Amherstburg men would be engaged. Being offered 30 cents per hour, they demanded 40 cents and after an hour this was agreed to and forty-two men went to work.

A strike of harvesters in the vicinity of Taber, Alta., on August 24, has been reported in the press but particulars have not been received. The strikers are reported to have demanded \$3 per day as against \$2 and \$2.50 offered. On July 30 it is stated, harvesters held a conference at Lethbridge and agreed upon a wage scale at \$2.50 per ten-hour day for stooking and \$3 per eleven-hour day for threshing, with 50 cents per hour overtime.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**QUARRY AND LIMEKILN WORKERS, GUELPH, ONT.**—As a result of mediation by an official of the Ontario Department of Labour this dispute, which began on July 17, was settled and work was resumed on August 7. It is reported that hours of labour and wage rates were unchanged but that improvements in working conditions were made.

**BAKERY EMPLOYEES, WINNIPEG, MAN.**—This dispute, an alleged lockout, involving three employees in one bakery, commenced on July 29 but was reported to the Department too late for inclusion in the August issue of the Labour Gazette. An agreement with the Food Workers' Industrial Union is reported to have expired on July 5 and it appears that three bakers who demanded wages and reduced hours, in accordance with the Union

scale, were discharged and the remaining employees formed a partnership. The plant was picketed and three of the pickets were arrested in connection with intimidation and damage to the property of the company. By August 15 the establishment was closed and the dispute is recorded as terminated from that date.

**COMPOSITORS, CALGARY, ALTA.**—Reference was made in the LABOUR GAZETTE for August, page 725, to a dispute involving a number of compositors in one newspaper printing establishment, alleged to have been discharged on July 8 because they refused to join a new union with which the employer had signed an agreement providing for the continuation of the forty-five hour week. No settlement of the dispute was reported by the end of the month.

**LONGSHOREMEN, VANCOUVER, B.C.**—On August 29 the representative of the Department of Labour brought the parties to this dispute together in a joint conference but a settlement was not reached. The employers offered to re-employ some of the strikers but refused to make an agreement with the union. Early in September, in accordance with section 65 of the Industrial Disputes Investigation Act, Mr. Justice Davis of the Supreme Court of Canada was appointed under the Inquiries Act as a Royal Commissioner to investigate and report on the dispute. During the month from time to time some of the workers who had replaced the strikers were reported to have been attacked by pickets and sympathizers, some of the latter being arrested. Toward the end of the month longshoremen at ports on the Pacific coast in the United States voted not to handle cargo from Vancouver.

**COASTAL LONGSHOREMEN, SHIPS' CREWS, SHIP LINERS, BOOM LOG WORKERS, ETC., VANCOUVER, VICTORIA, NEW WESTMINSTER, CHEMAINUS, ETC., B.C.**—This strike, in sympathy with that of longshoremen at Vancouver, was unternminated at the end of the month but it was reported that practically all the striking longshoremen at New Westminster and Victoria had been replaced and also that members of ships' crews who ceased work had been replaced. The crews of a number of United States ships in the port of Vancouver were reported to have refused to work the ships. They were then discharged and returned to the United States. Some pickets at New Westminster were arrested on charges of wilful damage to property, assault and carrying dangerous weapons.

**COAL MINERS, CUMBERLAND, B.C.**—Employees in one colliery, objecting to the introduction of contract rates for certain miners

instead of data wage rates, held a mass meeting of the miners on August 6, it being stated that the manager had refused to discuss the change. The management, however, had notified the committee that as this would close the mine for the day it was in violation of the section of the agreement regarding stoppages and suggested that the meeting be called on an idle day. The committee was also notified that if the agreement were violated in this way, being the second time, the mine would be closed indefinitely. At the suggestion of the Minister of Mines for British Columbia, the management met the committee on August 11 and notified them that consideration would be given to re-opening the mine but that only sufficient men to operate the mine would be employed. Work was resumed on August 12, for the night shift, 300 being employed and more to be taken on later. The employees were also notified to elect a committee to negotiate a new agreement. The miners then telegraphed the Federal Minister of Labour requesting the establishment of a Conciliation Board, and were asked for further information. On receipt of this the western representative of the Department was notified to mediate in the dispute.

**COAL MINERS, SYDNEY MINES, N.S.**—Employees in one colliery ceased work for one shift under the impression that one worker was being suspended for disobeying orders. This worker being employed on the next regular shift, work was resumed.

**SHOE FACTORY WORKERS, GALT, ONT.**—Employees in one establishment ceased work on August 20 demanding an increase in wages, piece rates, under a new system of operation. As a result of negotiations work was resumed on August 24, the management having agreed to improve conditions from time to time as the new system was tried out.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS & SUITS), MONTREAL, P.Q.**—Employees, numbering about 2,000 in about eighty establishments, ceased work on August 8 to secure the acceptance of a union agreement by all employers. The agreement between the Association of Manufacturers of Cloaks, Suits and Ladies Garments and the International Union of Ladies' Garment Workers had expired on July 1 and a new agreement for two years had been negotiated providing for certain increases in wages, the continuation of the forty-four hour week until December 31, with forty hours thereafter. A number of employers, about twenty, refused to sign the agreement so a stoppage in all shops from August 8 to August 12 was decided upon. Application to have the agree-

ment made binding on all employers and workers in the Montreal area under the Quebec Collective Labour Agreements Act was made. On August 12 work was resumed by 1,600 employees in sixty-five establishments including five the proprietors of which had previously refused to accept the agreement; and on August 13, 200 employees resumed work in five additional establishments, leaving only about 100 employees and five establishments still involved. At the end of the month a settlement in these had not been reported.

**COTTON FACTORY WORKERS, Three Rivers.**—Employees in one establishment ceased work on August 26 against the replacement of certain men by girls, demanding recognition of the United Textile Workers of America. As a result of conciliation by the Mayor of Three Rivers work was resumed on August 28, married men and those supporting families being re-engaged, the management agreeing to recognize a committee of employees but not the union.

**FURNITURE FACTORY WORKERS, TORONTO, ONT.**—Employees in nine establishments ceased work on August 22, to secure a renewal of the agreement which had expired. (Labour Gazette, October, 1934, page 964). After one day, work was resumed in six establishments, employing about one hundred workers, the employers having renewed the agreement, and in two other establishments by August 24. In the remaining shop the strike was reported to be not effective. An additional shop has been affected by a strike since May 16 as listed elsewhere in this article.

**MARBLE SETTERS, TORONTO, ONT.**—Employees of four marble, tile and terrazo contractors ceased work on August 14, an agreement between the marble contractors section of the Toronto Building and Construction Association and the Marble Setters' Local of the Bricklayers, Masons and Plasterers International Union of America not having been reached. The previous agreement had expired in 1934 but the wages and working conditions had been continued unchanged. In negotiating a new agreement the union proposed an increase in wages to \$1.15 per hour while the contractors proposed a reduction in wages from \$1.10 per hour, with six hours per day and thirty hours per week, to \$1.00 per hour, eight hours per day and forty hours per week. The employees secured work with other contractors and the employers involved requested the intervention of the Department of Labour. The Toronto representative of the Department was immediately notified to deal with the dispute but found that it had already been settled by direct negotiations and work

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1935\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in progress prior to August, 1935.</b>			
MINING, ETC.— Quarry and limekiln workers, Guelph, Ont.	13	59	Commenced July 17, 1935; for increased wages, reduced hours and union agreement; terminated August 7, 1935; compromise.
MANUFACTURING— <i>Vegetable Foods</i> — Bakery employees, Winnipeg, Man.	3	35	Alleged lockout; commenced July 29, 1935; re increased wages and reduced hours; terminated August 15, 1935; indefinite.
<i>Textiles, Clothing, etc.</i> — Women's clothing factory workers, Montreal, P.Q.	40	1,000	Commenced July 29, 1935; for union wages and working conditions; untermiated.
<i>Printing and Publishing</i> — Compositors, Calgary, Alta.	22	500	Commenced Jan. 10, 1935; against decrease in wages; untermiated.
Compositors, Winnipeg, Man.	50	1,000	Alleged lockout; commenced April 7, 1935; re employment of members of one union only; untermiated.
Compositors, Calgary, Alta.	20	500	Alleged lockout; commenced July 8, 1935; re employment of members of one union only; untermiated.
<i>Other Wood Products</i> — Furniture factory workers, Toronto, Ont.	13	338	Commenced May 16, 1935; alleged violation of agreement; untermiated.
TRANSPORTATION— <i>Water</i> — Longshoremen, Powell River, B.C.	65	1,000	Commenced May 17, 1935; for union recognition and union wage scale; untermiated.
Longshoremen, Vancouver, B.C.	700	12,000	Commenced June 5, 1935; against cancellation of agreement; untermiated.
Coastal longshoremen, ships' crews, ship liners, boom log workers, etc., Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.	1,000	15,000	Commenced June 15, 1935; in sympathy with longshoremen on strike at Vancouver from June 5, 1935; untermiated.
TRADE— Dairy drivers, Hamilton, Ont. . .	10	100	Commenced June 27, 1935; for "closed shop" union agreement; lapsed early in August, 1935; in favour of employer.

**(b) Strikes and Lockouts commencing during August, 1935.**

MINING ETC.— Coal miners, Cumberland, B.C.	500	2,500	Commenced Aug. 7, 1935; alleged violation of agreement; terminated Aug. 12, 1935; in favour of employer.
Coal miners, Sydney Mines, N.S.	450	450	Commenced Aug. 15, 1935; against alleged suspension of worker; terminated Aug. 15; in favour of employer.
MANUFACTURING— <i>Boots and Shoes</i> — Shoe factory workers, Galt, Ont.	182	728	Commenced Aug. 20, 1935; for increased wages; terminated Aug. 23, 1935; compromise.
<i>Textiles, Clothing, etc.</i> — Women's clothing factory workers, Montreal, P.Q.	2,000	7,500	Commenced Aug. 8, 1935; for union wages and working conditions; untermiated.
Cotton factory workers, Three Rivers, P.Q.	2,100	6,300	Commenced Aug. 26, 1935; against replacement of men by girls and for union recognition; terminated Aug. 28, 1935; compromise.
<i>Other Wood Products</i> — Furniture factory workers, Toronto, Ont.	200	300	Commenced Aug. 22, 1935; for renewal of union agreement; terminated Aug. 24, 1935; in favour of employer.
CONSTRUCTION— <i>Building, etc.</i> — Marble setters, Toronto, Ont.	20	80	Commenced Aug. 14, 1935; against reduced wages and increased hours; terminated Aug. 21, 1935; compromise.
TRANSPORTATION— <i>Water</i> — Steamship crews, Great Lakes and St. Lawrence River.	150	25	Commenced Aug. 9, 1935; for increased wages, reduced hours and improved conditions; terminated Aug. 10, 1935; in favour of employer.
TRADE— Dairy employees, Toronto, Ont.	35	14	Commenced Aug. 15, 1935; against reduction in wages and for union agreement; terminated Aug. 15, 1935; in favour of workers.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

resumed on August 22. An agreement, signed on August 21 providing for substantially the same wages and working conditions as the previous agreement, is outlined elsewhere in this issue.

**STEAMSHIP CREWS, GREAT LAKES & ST. LAWRENCE RIVER.**—A number of steamships at various ports between Fort William, Ont., and Montreal, P.Q., were delayed for a few hours on August 9 when some of the members of their crews ceased work in response to a strike called by the National Seamen's Association. The union officers had demanded that the steamship companies should negotiate an agreement with increased wages and improvements in working conditions but the latter had refused, stating that the union did not represent an appreciable percentage of the employees. The union officers proposed \$50 per month for deckhands as against \$35 and \$40 per month stated to be paid on most of the ships, except the oil tankers where \$50 was generally paid, claiming that deckhands

on United States ships on the Great Lakes were paid \$70 per month and upward for an eight-hour day, whereas in Canada hours were twelve per day with excessive extra work without additional pay and there were also many unsatisfactory working conditions. Out of 3,000 employees only 150 are reported to have ceased work and most of these resumed work in a few hours.

**DAIRY EMPLOYEES, TORONTO, ONT.**—Milk drivers and plant employees in one establishment ceased work on August 15, the agreement between the employer and the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers having expired on July 7, and efforts to negotiate a new agreement having been unsuccessful. The employer had proposed wage reductions for the plant employees. Work was resumed after four hours, an agreement with the same conditions as before having been reached. The agreement is outlined elsewhere in this issue.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, in the review of Strikes and Lockouts in Canada and Other Countries, 1934. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in July was 46 and 12 were in progress from the previous month, making a total of 58 disputes in progress for the month involving 27,100 workers with a time loss of 114,000 working days for the month.

Of the 46 disputes beginning in July, 8 were over demands for increases in wages, 11 over other wage questions, 14 over questions respecting the employment of particular classes

or persons, 7 over questions respecting working arrangements and 6 over questions of trade union principle. During the month, settlements were reached in 36 disputes, of which 9 were settled in favour of workers, 12 in favour of employers and 15 resulted in compromise settlements. In the case of 6 other disputes, work was resumed pending negotiations.

A strike of omnibus and coach drivers and conductors in various centres began July 25 and following days, involving in all 2,500 workers. The dispute was over the dissatisfaction of workers with new time schedules. Work was resumed July 28.

### France

Early in August strikes are reported to have occurred at naval arsenals at Toulon, Brest, Cherbourg and L'Orient and also strikes of crews of vessels at L'Havre and St. Nazaire in protest against wage reductions decreed by the Government. Riots occurred at Toulon and disturbances at other places, but work was resumed after two or three days.

### United States

The number of disputes beginning in June was 158, and 159 were in progress from the previous month, making a total of 317 disputes in progress during the month, involving 119,000 workers with a time loss of 1,575,000 working days for the month.

A strike of 3,200 textile workers employed by one company with mills in Massachusetts, Connecticut and Rhode Island continued from June 29 to August 5 when work was resumed at the same wage rates as before, but with provision for future discussion of the wages question.

The shipbuilders' strike at Camden, New Jersey, which began May 11 and which was mentioned in the last issue of the LABOUR GAZETTE, terminated August 27, when both

parties agreed to accept the suggestion of the President of the United States to refer the dispute to an arbitration board appointed by him.

On August 27, a strike of shipping clerks began in the ladies garment industry in New York City. It was reported that about 12,000 were involved by September 3. The demands were for higher wages with a standard minimum wage and shorter hours.

HOURS OF LABOUR IN MANUFACTURING INDUSTRIES IN CANADA, 1933.

IN the annual census of manufacturing industries in Canada the Dominion Bureau of Statistics secures data as to numbers of establishments, capital invested, quantity and value of production, raw materials, fuel and power, numbers of employees, total salaries and wages, and also as to hours of labour. For each establishment information is required as to the number of employees on wages in the month of highest employment whose working hours per week are forty hours or less, forty-one to forty-three, forty-four, etc. From 1924 to 1930 the information secured was as to the numbers working eight hours per day or less, nine hours, ten hours and over ten hours per day. The figures so secured were published in the LABOUR GAZETTE for January, 1927, page 105; October, 1929, page 1189; December, 1932, page 1096; Sep-

tember, 1933, page 955; and September, 1934, page 890.

From the census of manufacturers in 1933, information as to numbers of establishments, capital, employees, salaries, wages, etc., was given in the LABOUR GAZETTE for April, 1935, on page 338. A table showing the numbers of employees and total wages and salaries paid in other industries for which the Bureau secures data annually was included. The figures as to hours worked in the manufacturing industries are now available and appear in the following tables.

Table I shows the numbers of wage-earners working specified hours in all manufacturing industries by provinces for all Canada. Table II shows the numbers of wage-earners working specified hours in each group of industries and in each of the important industries in each group.

TABLE I.—HOURS OF LABOUR IN MANUFACTURING INDUSTRIES IN CANADA, BY PROVINCES, 1933

Province	Number of wage-earners whose regular hours per week were:												Total number of wage-earners
	40 or less	41-43	44	45-47	48	49-50	51-53	54	55	56-59	60	Over 60	
Prince Edward Island.....	541	39	104	31	262	27	50	405	47	33	629	4	2,172

## LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1934

### Annual Report of Provincial Department of Labour

THE seventeenth annual report of the British Columbia Department of Labour reviews the administrative activities of the department during the year ended December 31, 1934. Established under the Department of Labour Act of 1917, the Department is empowered to require trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees regarding hours of work, wages, etc., and to obtain from any available source information as to the cost of living, the relation of prices to labour, and industrial conditions in the province. Also, under departmental administration are the Employment Offices and Factories Act.

By legislation enacted in 1934 a Board of Industrial Relations, of which the deputy minister of labour is chairman, administers the Hours of Work Act, the Male Minimum Wage Act and the Female Minimum Wage Act (LABOUR GAZETTE, June, 1934, page 510).

*Industrial statistics, payrolls, etc.*—As in previous years the annual report presents statistical data which indicates the industrial situation as reflected in payrolls, employment, etc. The total payroll of the 3,956 firms reporting amounted to \$81,764,381, an increase of \$13,735,956.39, or 12.02 per cent. As this payroll total does not include relief wages, the figures are comparable with years when relief work was not necessary. With respect to the 1934 payroll it is pointed out that this figure (\$81,764,381) does not represent the gross total. In addition there must be included: \$803,665 in returns too late for classification; \$1,000,000 as an estimate for firms failing to report; \$10,449,907.03 in railway payrolls; \$5,000,000 for Dominion and provincial employees; \$2,650,000 for wholesale and retail firms; \$3,250,000 for cartage, warehousing, auto transportation, etc.; \$7,500,000 for steamship and express services, and \$1,150,000 miscellaneous—making a total industrial payroll of \$113,567,953.54.

Wage earners received 76.24 per cent of the total payroll, while the class designated as clerks, stenographers and salesmen received 12.71 per cent; and officers, superintendents and managers, 11.05 per cent.

An analysis of the statistics indicates that only three of the twenty-five classes of industries tabulated show decreased payrolls. These were: printing and publishing with a loss of \$55,000; cigar and tobacco manu-

facturers with \$14,000; and laundries, dyeing and cleaning with an \$11,000 reduction.

Increases in the annual payrolls varied from \$19,000 in builders' materials up to \$4,700,000 in the lumber industry, the other increases being as follows: metal-mining, \$3,233,000; smelting, \$1,100,000; food products, metal trades, miscellaneous trades, and pulp and paper, approximately \$700,000 each; oil-refining, \$392,000; coal-mining, \$336,000; manufacture of wood (N.E.S.), \$273,000; garment-manufacture, \$218,000; explosives and chemicals, \$185,000; ship-building, \$160,000; general contracting, \$124,000; house-furnishing, \$108,000; leather and fur goods and manufacture of paint, \$56,000 each; coast shipping and street-railway, gas, water, power, etc., \$40,000 each; canneries, etc., \$30,000; jewellery manufacturing, \$21,000. "As further proof of the business recovery in 1934", the report showed 123 firms with a payroll of \$100,000 as compared with 98 in 1933.

*Weekly Wage Rates.*—The tabular statistics of wage rates indicate that "the downward trend of wages which began in 1929 had been arrested in 1933." The report further points out that though the 1934 recovery would seem small yet the full effect of the Orders fixing minimum wages would not be apparent until the 1935 figures were published. Evidences of an improved wage situation were to be seen in the decrease of approximately 1,700 in the number receiving less than \$19

per week, and in the increase of the average weekly wage from \$22.30 in 1933 to \$23.57 during 1934 for 70,192 adult male employees. In 1929, the average weekly wage was \$29.20, and in 1920 (the peak year) it was \$31.51.

As indicated in the accompanying table of twenty-five chief industrial groups, fifteen showed increases in the average weekly wage, these increases ranging from 5 cents in smelting to \$3.52 in the lumber industry.

The number of wage earners in each industry is shown in tabular statistics. The following table is a summary of all such tables and indicates the number of employees by weekly wage groups in 1934.

Totals.....	70,192	3,314	9,295	657	784

**Apprenticeship.**—The number of apprentices reported—784—showed a substantial increase over the 1933 total of 621, or an addition of 163. Increases in apprentices were in the following industries: miscellaneous metal trades, 63; contracting, 43; garment making, 34; food products, 26; miscellaneous trades and industries, 17; street-railways, etc., 11; ship-building, 7; metal-mining, 6; lumbering, 5; coast shipping, 3; coal-mining and manufacture of jewellery, 1 each.

Industries where the number of apprentices have decreased are headed by wood-manufacture (N.E.S.), 27; explosives and chemicals, 9; smelting, 8; builders' materials and

pulp and paper manufacture, 4 each; and leather and fur goods, 3.

**Employment Service.**—According to the report, the employment figures for 1934 "clearly demonstrated that conditions from the standpoint of the number employed was, at the end of the year, in a better state than any period since 1930."

Beginning the year with 50,463, a steady increase took place to August when 68,813 were gainfully employed. This figure declined during the balance of 1934 to 56,193 for the month of December, being a net increase of 5,730 over January.

This improvement is also reflected in the annual report of the provincial employment service. However, the superintendent observed that while there was a marked improvement in industrial conditions in all of the basic industries with the possible exception of coal mining, yet the increased opportunities for employment did not materially reduce the surplus of labour with the result that relief measures were continued on a large scale and the camps operated by the Department of National Defence were filled to capacity during the winter months.

The volume of business transacted during the year was approximately 14 per cent greater than in 1933. Placements totalled 47,994 all being within the province. Of this total, 25,518 were sent to employment with a duration ranging from one week to permanence, and the balance, 22,476, went to jobs lasting less than one week. Positions were found for 5,113 women, 2,412 being for periods in excess of one week and the balance, 2,701, were sent to short jobs, principally in domestic service.

**Unemployment Relief.**—Details are presented with respect to the administration of unemployment relief. Registration of persons requiring relief commenced in July, 1931, and over a three-year period 127,990 applications had been received. Owing to the fact that many of these applicants had dispersed and the status of others considerably changed, it was deemed advisable to commence a new registration. This was put into effect on August 1, and over a five-month period ended December 31, 41,692 applications had been received. As a matter of comparison, it was noted that over the same period in the initial registration in 1931, 67,190 applications were received.

Reference was also made to the changed status of the Federal government's contribution for relief purposes, the percentage basis being substituted by a fixed monthly sum.

**Factory Inspection.**—The report of the factory inspection branch reviews the activi-

ties of the year in accident prevention, prosecutions, sanitation and ventilation, investigations into complaints, and inspections of passenger and freight elevators.

*Labour Disputes and Conciliation.*—The section of the report dealing with labour disputes and conciliation indicated that during the year there were 17 strikes in the province, involving 4,427 employees with a time loss of 73,977 working days.

### Board of Industrial Relations

One of the important features of the annual review for 1934 is the report of the Board of Industrial Relations, administering the Female Minimum Wage Act, the Male Minimum Wage Act and the Hours of Work Act. In a statement of its duties the Board declared its objectives as follows:

"In making regulations the Board has tried to be guided by what it conceived to be the underlying principle of the Statutes—namely, to arrest the precipitate decline in wages that had taken place with alarming acceleration; to establish a foundation in wage structures where such foundation had largely disappeared; and to encourage an upward trend in wages, with a view to the restoration of former standards.

"At no time has the Board desired to usurp the functions of trade unions in the exercise of their recognized prerogative to secure union wages and working conditions by means of organization and negotiation. Our experience has convinced us that organized labour is jealous of its own admitted sphere.

"As a Government body we do, however, interpret it as our duty to intervene where the welfare of the State and the well-being of its citizens are detrimentally affected by unduly low wages and unwarranted conditions."

*Female Minimum Wage Act.*—During the year, 3,192 employers (an increase of 40) reported 19,379 women and girls gainfully employed, this total being 1,484 in excess of the figures for 1933. The percentage of younger workers dropped from 8.11 to 5.68. The average weekly wage of all experienced female workers was \$14.78 as compared with \$14.87 in 1933. "If", states the report, "all the workers covered in the tabulation were able to count on an average of \$14.78 weekly for the entire year, a feeling of security to the employee would be guaranteed." The report then proceeds to demonstrate that this is not the true picture, and that due to seasonal work (as in the fruit and vegetable industry) or to rush periods (as in branches of the manufacturing industry) many workers must budget a few months wages to spread over

the whole year. Statistics are given to show the relative tendencies of the nine classes of occupations toward the minimum wages established by the Orders of the Board. For all employees in all nine groups, 18 per cent were held at the minimum wage as against 23.38 per cent during 1933. Omitting the fishing industry, which is seasonal and covers only a very small number of women employees, the figures showed that a larger percentage (31.40) of mercantile workers were kept at the actual legal minimum set for full time work than in any other group.

Seven per cent more workers in 1934 were being paid in excess of the amount required by law than in the preceding year. As proof that the minimum wages have not become standard wages, the Board points to the fact that 9,159 women, or 47.27 per cent were paid wages or salaries in excess of the prescribed rates.

The Board commends the situation in the telephone and telegraph occupation where 73.06 per cent of the operators are paid more than is legally necessary. In this respect the fruit and vegetable industry is in second place, but owing to the seasonal nature and short duration of the work it is not regarded as a fair comparison. Office workers are in third position in regard to receiving wages in the higher categories. The percentages in the other groups, with exception of laundry workers, are much on a par.

The laundry group contains the greatest percentage (74.38) of workers receiving less than the minimum rate due largely to broken time. In 1933 the percentage was still higher at 82.03, and while the improvement in 1934 is credited, the Board considers that a percentage of 74.38 "is extremely high."

In enforcing its orders the Board collected \$13,213.80 in arrears of wages from employers who had paid their women and girl employees at lower amounts than the law required. This was the largest sum collected during a year's administration in the history of the department. In connection with this phase of its work, the Board summarizes its prosecutions for infractions of wage Orders.

While noting that business conditions showed some gradual improvement in 1934, the Board considered that they had not yet approached normal level. Some employers found it still necessary to reduce overhead by one or two or all of three expedients—wage cutting, short time or lay-offs. However, these tendencies were far less apparent than in 1933, and an appreciable number of firms had begun to make restorations of wage decreases, while there were also additions in staff and elimination of part time.

**Male Minimum Wage Act.**—The Board lists the occupations and industries in which minimum wages for male employees were fixed in 1934 and the first six months of 1935 (Summaries of these orders have been published from time to time in issues of the LABOUR GAZETTE).

**Hours of Work Act.**—Analyzing its administration of the Hours of Work Act, the Board states that during 1934 "substantial progress has been made in the reduction of working hours." Of the 75,435 employees reported by the 3,956 firms, 85.18 per cent were working 48 hours or less per week, as compared with 77.95 per cent during 1933; 5.76 per cent

were engaged between eight and nine hours per day, a reduction of 5.22 per cent, while only 9.06 per cent were working in excess of 54 hours per week.

The average weekly working hours for all employees in 1934 was 47.32 as compared with 47.35 in 1933; 47.69 in 1932; 47.37 in 1931; and 48.62 in 1930. A tabular summary of the average weekly hours by industries is presented, and this shows an average working week ranging from 41.39 hours in smelting to 51.51 hours in metal mining. During the year, the Board granted over-time permits to the number of 151 as follows: stock taking, 54; urgent orders, 36; break-down of plant, 21; seasonal business, 23; emergency work, 17.

## LABOUR AND INDUSTRY IN ALBERTA DURING 1934-35

### Annual Report of Bureau of Labour

THE annual report of the Bureau of Labour of Alberta, recently received, presents a review for the year ending March 31, 1935, of the various measures under the Bureau's administration—the Factories Act, the Minimum Wage Act, the Theatres Act, the Steam Boilers Act and the Employment Offices Act. In addition, statistics are given of trades and industries in the province during this period.

**Trades and Industries.**—According to the report, the returns received indicate a slight improvement over the previous year though the volume of employment was still far below normal. Returns from 2,391 firms included 36,968 male employees over eighteen, 335 under eighteen, 6,771 female employees over eighteen, 86 females under eighteen, and 518 apprentices.

Total payments for wages and salaries were \$53,863,690.73 of which sum \$46,464,550. was paid to wage earners, as compared with \$51,127,159.97 and \$43,929,397.76, respectively, in the previous year.

The returns when considered as to employment by months show fluctuations which previous returns indicate to be normal, with February the month of least employment when 34,584 men were employed, and September the month of greatest when 39,564 were employed.

As in previous years individual industries also show employment fluctuations, again demonstrating that for unskilled work in the various industries men interchange from one to the other.

On the basis of monthly employment, there was a small steady increase in the number of women employed throughout the year.

Tabular statistics indicate the weekly wages and hours by groups. Of the 36,968 male

employees over eighteen years of age, the largest number (4,398) were employed in the wage group between \$30 and \$34.99 per week. There were also 2,172 male employees receiving between \$35 and \$35.99 per week; 1,314 between \$40 and \$44.99; and 1,342 at \$50 and over. Of the 6,771 female employees over eighteen years, by far the largest number (1,615) were receiving between \$12 and \$12.99 per week.

With respect to hours, the largest number of employees (17,532) worked 48 hours per week; 2,341 worked 45 hours per week; 6,378 worked 44 hours; 3,650 worked 40 hours. There were also 2,458 working 54 hours per week; 1,022 working 56 hours per week; 1,266 working 60 hours per week; and 253 working 70 hours per week. Of the 2,391 firms reporting, 2,155 operated the 52 weeks.

**Factories Act.**—The administration of the Factories Act during the year involved a total of 3,686 inspections of 3,487 factories, shops, hotels, and office buildings in which were employed 13,480 male and 5,775 female employees.

Recommendations relative to safety, hours and wages and the employment of children to the number of 1,638 were made, all of which were carried out by employers.

There were 398 inspections of 393 elevators in connection with which 300 safety recommendations were made. Of the elevators 98 were passenger, 278 freight, 14 Humphrey, and one escalator.

**Theatres Act.**—The chief inspector of theatres reported on inspections made under the Theatres Act, and the recommendations made respecting projection rooms, etc. He considered that "the itinerant field is wide and

the possibilities of infraction great without active supervision and inspection."

**Boilers Act.**—The report of the chief boiler inspector indicated a year's activity free from major accidents. Total revenues derived from inspections and examinations of candidates for engineers' certificates amounted to \$20,873.26. During the year, there were 2,754 inspections of boilers and pressure vessels, while the number of certificates issued to engineers, etc. totalled 343.

**Employment Offices.**—The report of the Director of provincial employment offices showed encouraging signs in one of the major industries—lumbering—which absorbed a greater number of workers than in recent years.

Of the 31,056 vacancies filled, 26,551 were for males and 4,505 for females.

Placements in the male section were recorded as 9,372 being sent to farms; 262 to building construction; 113 to clerical work; 303 to personal occupations; 8,803 to general labouring; 1,348 to lumbering; 167 to manufacturing industries, 33 to railways; 364 to mining; 366 to miscellaneous occupations, and 5,428 to casual employment.

In the female section, 1,139 were sent to farms; 17 to clerical positions; 2,130 as domestics; 16 to miscellaneous occupations, and 1,204 to casual employment.

Of the 26,648 vacancies listed in the male section, 99.6 per cent were filled; in the female

section 4,904 vacancies were listed of which 91.8 per cent were filled.

Tabulations of single men sent to relief camps indicated that these were distributed as follows: 1,485 to camps operated by the provincial government; 719 to camps operated by the National Parks Branch, Department of Interior; and 5,295 to camps operated by Department of National Defence. There were 6,703 families assisted by direct relief at a cost of \$2,411,815.92.

**Minimum Wage Act.**—Included in the Bureau's review is the twelfth annual report of the Minimum Wage Board. During the year ending March 31, 1935, a total of 2,368 inspections was made of 2,147 businesses in which were employed 5,807 experienced females and 592 learners. There were 335 orders for adjustment of wages, 47 for adjustment of hours and 12 for adjustment of staff, so that not more than 25 per cent would be in receipt of apprentices' wages.

Seven court cases were taken against employers for failing to pay minimum wages. Four convictions were obtained, three being dismissed.

A number of permits were issued for overtime to be worked to take care of emergencies that had arisen. In all cases employers advised the Department of the number of hours worked and the amount paid.

## Railway Employment and Wages in U. S. A.

Railroad workers in the United States earned on the average approximately \$1,240 in 1933 compared with \$1,625 in 1929 and \$1,505 in 1924, according to information recently published by the U.S. Department of Labour. Their annual earnings advanced 8 per cent between 1924 and 1929 and then declined 24 per cent during the 4 years between 1929 and 1933. The net result was that in 1933 railroad workers earned on the average about 18 per cent less than in 1924.

These estimates are based on the study of annual earnings of 300,000 railroad employees on 14 railroads recently made by the office of the Federal Co-ordinator of Transportation. The figures represent actual earnings and take into consideration the large amount of part-time work and unemployment which have prevailed in the railroad industry since 1929. One out of every seven railroad workers employed in 1933 earned less than \$600. During that year the proportion of wage earners in this lowest group was over twice as large as in 1929 and more than three times as large as in 1924. The proportion of employees earning \$2,400 or more per year increased from 10 per

cent of the total number in 1924 to 14 per cent in 1929 and then declined to 8 per cent in 1933.

Unemployment and part-time work were the principal factors in the general decline in annual earnings of railroad employees between 1929 and 1933. During this period, employment fell off more than 600,000—250,000 in 1930, 220,000 in 1931, and 140,000 in 1932. Slightly fewer than 1,000,000 workers were employed in 1933 as compared with 1,600,000 in 1929 and 1,770,000 in 1924.

Other important factors which contributed to the decline in the annual earnings of railroad employees in 1933 were shorter hours of work, demotions, and the 10 per cent wage cut which went into effect on February 10, 1932.

The United States Treasury Department (Public Health Service) has published Public Health Bulletin No. 215, dealing with Skin Hazards in American Industry. This bulletin deals with the incidence of dermatitis in the rubber industry; in oil refining; in synthetic dye manufacturing; in candy making; among silk throwsters; in the manufacture of linseed oil; due to perfume; and due to pyrethrum contained in an insecticide.

## LABOUR LEGISLATION IN NOVA SCOTIA IN 1935

THE Nova Scotia Legislature, which was in session from March 5 to May 11, 1935, enacted new statutes providing for the regulation of hours of work in industrial undertakings and for the establishment of a provincial economic council, and amended laws relating to workmen's compensation, coal mining and unemployment relief.

The Limitation of Hours of Work Act, which will come into force on Proclamation, defines "industrial undertaking" to include mining, construction and manufacturing, including shipbuilding and the generation, transformation and transmission of electricity or motive power of any kind. The Act provides for a Board of Adjustment consisting of the Deputy Minister of Labour as Chairman and two other members appointed by the Lieutenant-Governor in Council. The Board may, after investigation, and subject to the approval of the Lieutenant-Governor in Council, determine any or all of the following:—the number of hours per day or per week during which a person employed in industrial undertakings may work; the kinds of industrial undertakings, the districts of the province, and the categories of workmen to which, and the length of time during which, the provisions of the Act shall apply. It is provided, however, that persons employed in a supervisory, managerial or confidential capacity shall not be included.

Where by law, custom or agreement between employers' and workers' organizations, or, where no such organizations exist, between employers' and workers' representatives, the hours of work on one or more days of the week are less than the period determined by the Board, such period may be exceeded on the remaining days of the week by agreement between such organizations or representatives. The limit may also be exceeded in continuous processes carried on by a series of shifts and also in case of accident, actual or threatened, in case of urgent work to be done to the machinery or plant, or in case of *vis major*, but only so far as may be necessary to avoid serious interference with the working of the undertaking.

The employers must, by means of notices or in other manner approved by the Board, notify the hours at which work begins and ends, and, where work is carried on by shifts, the hours at which each shift begins and ends. He must also give notice of any rest intervals during the period of work which are not reckoned as part of the working hours and must keep a record in prescribed form of all overtime worked owing to accident or emer-

gency. In addition, the employer must keep at his principal place of business in the Province a record of the wages, hours of labour, names, ages and addresses of all his employees and produce it for inspection if required.

The whole of the staff employed in any industrial undertaking must be granted a rest period of at least twenty-four consecutive hours. This period must, whenever possible, be granted to the whole staff simultaneously and fall upon the Lord's Day as defined in the Dominion Lord's Day Act.

An employer violating, or failing to comply with, any provision of the Act is liable on summary conviction to a penalty of not less than \$20 nor more than \$100 for each offence, in addition to any other penalty prescribed by law.

The Workmen's Compensation Act was the subject of a number of amendments. A member of the Board sitting alone is vested with all the powers, rights and privileges of a Justice of the Peace in enforcing the attendance of and examining witnesses, in compelling the production of books which are required by the Act or Regulations to be kept by an employer, and in the punishing of persons guilty of contempt. A summons signed by one member of the Board may be substituted for, and is to be equivalent to, a formal process in an action for enforcing the attendance of witnesses and the production of documents.

Subject to the provisions of the Act providing for adjustment of assessments, an employer who has ceased to be an employer has no right, title or interest in the Accident Fund and is to be deemed to have released the Board from all actions, proceedings, claims, etc., in respect of the Fund. This amendment is retroactive to January 1, 1917, but does not apply to existing litigation.

An amendment was made in the section under which an employer who neglects or refuses to make returns or pay assessments is liable for the capitalized value of compensation for accidents happening to his workmen during the period of default. An employer neglecting or refusing to report his estimate of payroll to the Board is now also made liable under this section and the liability in all cases is extended to include medical aid payable in respect of such accidents.

The section directing that penalties imposed under Part I of the Act shall be recoverable under the Summary Convictions Act or by an action brought by the Board, was amended to provide that, alternatively, the payment of such penalties may be enforced in the same manner as payment of an assessment by judg-

ment of a court on the filing of a certificate by the Workmen's Compensation Board.

Every employer carrying on an industry within the scope of Part I of the Workmen's Compensation Act, that is, any industry under the state system of workmen's compensation in Nova Scotia, must keep a time book in which is to be entered the name of every workman employed, the date of his first employment and every day thereafter on which he was employed, the rate of wages and the amount of any bonus or other remuneration to which he is entitled. Such employer must also keep a book containing the total number of days that each workman was employed or for which he is entitled to receive remuneration, the total amount of wages that each workman is entitled to receive for each period that he was employed where the pay period was less than a month, the total amount of bonus or other remuneration to which the workman is entitled, the allowance made per day to every workman and his motor or team and what the workman's wages would have been without such motor or team, and the time worked by the employer, his partners or members of his family. An employer who, in the opinion of the Board, fails to keep an adequate record or refuses to produce it for inspection or audit may be assessed upon the Board's estimate of the wages and other remuneration paid by such employer to his workmen. An employer who, in the opinion of the Board, has heretofore failed to keep a time book or other record required by the Regulations or has failed to produce it may be similarly assessed on the Board's estimate.

The owner or operator of a sawmill must keep a record of the quantity of the products of the forest sawed at his mill, the name and address of every person or firm for whom such products are sawn and the price charged and must produce such record for inspection and audit. He must also make a monthly return of these particulars. An owner or operator failing to keep such record or to produce it when required is liable to a fine of \$5 for each day of default. Every manufacturer, contractor or dealer who enters into a contract, either verbal or in writing, either on his own account or as agent for another, to buy products of the forest, must report particulars forthwith to the Board, and whenever a delivery is made under such contract such delivery with a statement of the quantities delivered must be reported to the Board on or before the fifteenth day of the month following such delivery. The manufacturer, contractor or dealer must keep a record of the names and addresses of all parties from whom he has bought or agreed to buy pro-

ducts of the forest and the particulars of such purchase and of all deliveries made under it and must produce such record for inspection under penalty of a fine of \$5 for each day of default. The above provision applies to builders, dealers or merchants buying or taking products of the forest in exchange for goods, only when the forest products taken from any one customer exceed \$300 in any calendar month. "Products of the forest" is defined to include logs, pulpwood, railway ties, pit props, pit booms, shingles, laths, deals, boards, staves and all other lumber produced from forests in the Province.

A 1934 amendment provided for a minimum payment of \$6 per week in disability cases arising after the passing of the amending Act (May 2, 1934). The amendment, however, was only applicable in cases where the workman's rate of remuneration was such that if he had worked six days per week his average earnings would have been at least \$10 per week. Another section provided that the old scale of compensation for disability should not apply to accidents occurring after the passing of the amendment but would continue to apply to accidents occurring before that date. This last section has now been replaced by a section making it clear that the old provisions are not to apply to accidents within the scope of the amending Act and which occurred after May 1, 1934, nor to such accidents occurring after the passing of the 1935 amendment.

When a workman is so seriously injured that he cannot continue his regular work, his employer must, as soon as reasonably possible, convey him to a place where he can receive medical aid. In the event of the employer's failure to do so, any person may so convey the workman and claim reasonable charges from the Board therefor, the Board being entitled to recover the amount from the employer.

Where any work within the scope of Part I is undertaken by a contractor, the person for whom the work is undertaken must notify the Board in writing within seven days stating the name and address of the contractor, the nature of the work, the amount payable, whether a lump sum or in proportion to the work done (and in the latter case giving full particulars) and the probable length of time for completion of the work.

The Coal Mines Regulation Act was amended with respect to those sections governing the election of a checkweigher enacted in 1934. These provided in the first instance for the calling of a meeting of the "persons who are employed in the mine at cutting, digging or loading mineral and who are paid

according to the mineral gotten by them. . . ." The words "at cutting, digging or loading mineral" are now struck out. A further change permits the list of qualified voters to be arranged in numerical or alphabetical order.

The Nova Scotia Unemployment Act passed in 1932 was amended to enable the making of agreements between the Lieutenant-Governor in Council and any municipality respecting the furnishing of relief in money or money's worth to persons who are in necessitous circumstances. Municipalities are empowered to carry out their share of such agreements and to borrow money for that purpose. The amendments are retroactive to March 31, 1932.

The Nova Scotia Labour Act, which would have expired on May 1, 1934, is to continue in force for another year. This Act forbids any person or corporation employing twenty-five or more workers to hire as a workman any person who has not been a resident of Nova Scotia for at least one year, unless the person hired produces a certificate from the Government Employment Agent or municipal clerk in the place where he is to be employed stating that there are no unemployed persons in such place capable of doing and willing to do the work.

The Provincial Electoral Franchise Act, 1935, contains a clause similar to that included in the Dominion Franchise Act passed in 1934. This clause provides that time spent by a person at any unemployment relief camp or in any institution or refuge, maintained either by public or private monies, for the relief of distressed or unemployed persons shall be deemed to have been spent by that person in temporary absence from his last place of residence and if there be any such place of residence or home, either of himself or of any member of his family, to which he could return, he shall, notwithstanding his presence in such unemployment camp, be registered as an elector at such place of residence or home, and no person registered as an elector under the Act shall, merely because of time spent by him at an unemployment relief camp or in such an institution or refuge, lose his residence qualification in the electoral district in which he is so registered.

In the revision of the Lands and Forests Act the maximum rate of payment for persons called out to fight forest fires was fixed at \$1 per calendar day instead of \$1.50 per eight-hour day, as formerly.

The Juries Act was amended to exempt from jury service officers, clerks and labourers employed in any department of the Government of Canada instead of only those in the Customs, Inland Revenue, Post Office, and Railway Departments, as formerly.

The Co-operative Associations Act provides for the incorporation of such associations and applies to all societies incorporated under the Acts relating to the incorporation of farmers' and fishermen's co-operative societies as well as to other co-operatives.

The Nova Scotia Economic Council Act provides for an Economic Council of not more than fifteen members to advise the Lieutenant-Governor in Council on matters relating to the promotion and development of industry and trade in the Province.

---

Following publication of studies dealing with the laws of States Members of the International Labour Organization relative to the employment of women, child labour legislation, etc., the International Labour Office has recently issued a volume entitled "Children and Young Persons under Labour Law." This book is an examination of the laws to protect employed children and young persons.

It covers every kind of child or juvenile employment (other than the work of apprentices) and tries to show how this is legally regulated. In the matter of age, the limits on the one hand are infants-in-arms taking part in the production of cinematograph films, and on the other young men of 21 or 22 employed in certain occupations in mines. Occupations range from factory work to street trading and mendacity.

---

The fifteenth annual report of the Industrial Health Research Board of Great Britain, covering the period July 1, 1934, to June 30, 1935, has recently been published. The chief object of the Board is "to promote better knowledge of the relations of methods and conditions of work to healthy functioning of the human body." The investigations made by the Board may be divided into five sections, i.e. (a) environmental conditions including the study of lighting, noise, dust, and the physiology of heating and ventilation; (b) physiology and psychology of work which includes the analysis of vibration, colour vision and muscular work; (c) sickness, absenteeism and labour wastage; (d) vocational suitability; and (e) accident proneness.

---

The annual report of the Chief Inspector of Factories and Workshops (Great Britain) for 1934 shows that at the end of the year there were 162,922 factories and 83,110 workshops on the registers of the department, being an increase of 2,737 factories and a decrease of 3,741 workshops as compared with 1933. Premises of all kinds subject to inspection was 284,349. The total number of all accidents reported was 136,858—an increase of 23,598 over the preceding year. Fatal accidents increased from 688 in 1933 to 785 in 1934.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF AUGUST, 1935

### Reports of Superintendents of the Employment Service

THE employment situation at the end of August was reported by the Superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busy harvesting their crops, which were reported as fair. Logging was quiet, except for river work. Recent heavy rains also enabled the mill operators to again continue sawing. Fishing was good, there being large catches of mackerel, cod and haddock, and live lobsters in carload lots were being shipped from Point du Chene and other Northumberland Straits points. Coal mines in the New Glasgow area operated from one to six days per week, while those in Cape Breton and vicinity worked from 2 to 5 days per week, except for one mine, which was idle all week and one colliery, which did construction work only. Manufacturing continued fair and up to the average, with no idleness reported by the iron and steel industries. Construction work on jobs already underway was proceeding rapidly and considerable repair work was being done. Highway construction likewise continued. Transportation was brisk and trade was fair. Both permanent and casual placements were made in the Women's Division as a result of the steady demand for household workers.

Farming showed little change in the Province of Quebec. More activity was reported in logging, with the outlook promising for additional openings for bushmen in the fall. Manufacturing registered little variation from the previous month, rubber and textiles being slack in Montreal, with clothing and shoe factories and the metal industry fairly busy. In Quebec City there was a noted improvement in the leather and clothing trades. Building construction was busiest at Hull, while in Montreal, the demand for common labour was good as the city continued to give employment to many men on sewer and paving repairs. Highway work also absorbed a number of workers. Trade was fairly satisfactory. There were numerous calls received for women domestic workers and many placements were made.

The demand for farm workers in Ontario was fairly active, but was considerably less than that of the previous period, as harvesting in some sections was about completed. Several calls were received for help with the tobacco crop and for others to pick fruit in the Niagara District. Cutting of rough pulp-

wood had commenced at Port Arthur and a few orders had been filled for various logging camps in that vicinity. It was considered likely that operations in Sudbury in this industry would equal those of last year and probably be a little better. Mining was quiet. Seasonal industries, such as fruit and vegetable canneries, were adding to their staffs, with other firms operating steadily, but with no greatly increased call for help. The general employment situation in manufacturing, however, remained very steady. Building construction was fairly active, but the majority of work in this line was that on government buildings, particularly at Hamilton and Ottawa, repairs and alterations and erection of smaller buildings also furnishing employment for other workers there and elsewhere. Highway construction and maintenance was likewise carried on throughout the province. The return of employers from their summer homes made a decided increase in the number of orders for domestic workers in the women's division. Many farm and out of town vacancies were listed, as well as others in hotels and institutions, but the small wages offered in the majority of cases for household service were largely responsible for the difficulty experienced in filling some of these orders.

With harvesting in full swing in the Prairie Provinces, the demand for men greatly exceeded the supply. However, relief recipients in some districts answered the call for harvest help, only the unfit for work being left. Damage from rust was in evidence over a tremendously wide area and some yields were even more disappointing than anticipated. Logging was quiet in Manitoba, but fairly busy in Alberta. Activity existed in mining, but manufacturing was slacker in all lines. Building construction showed some improvement, particularly at Winnipeg, with a fair amount of railroad maintenance and highway construction also going on throughout the provinces. Trade was quiet, with collections difficult. A scarcity of applicants prevailed in the women's department, but it was reported that this condition would be of short duration, it being sometimes difficult to find suitable domestics for farm vacancies. City positions, both regular and casual, were easily filled.

Weather conditions in British Columbia were favourable for the harvesting of crops, many persons obtaining employment in the

orchards. All fruit crops were coming along well, the peach crop being a little larger than expected, although light, with apples and pears more numerous. Lumbering was fairly active, though forest fires destroyed a large amount of fallen timber along with equipment in the Alberni District. Fishermen had done exceedingly well during the week at North Island. Mining was brisk. Manufacturing was practically unchanged, no improvement being noted. Building construction was rather quiet, except at Victoria, where permits for the month of August, 1935, showed an increase of \$38,537 over those of

the corresponding period last year, and the outlook for extended building operations this fall was favourable. Relief work progressed on highways and other government projects. Drydocks and shipyards were quiet at Prince Rupert and fairly busy at Victoria. A strike continued on the waterfront at New Westminster, but at Prince Rupert and Victoria, favourable conditions prevailed and work was plentiful. In the women's domestic section there was noted a scarcity of experienced cooks general, as a steady demand for domestic workers was registered.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JULY, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on August 1 was 9,387, the employees on their payrolls numbering 949,940 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for July was 1,723 having an aggregate membership of 164,357 persons, 15.1 per

cent of whom were without employment on August 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of August, 1935, as Reported by Employers

Employment at the beginning of August showed an advance that considerably exceeded the average gain recorded in August of the last fourteen years, according to statements tabulated by the Dominion Bureau of Statistics from 9,387 firms, whose payrolls aggregated 949,940 persons, as compared with 934,633 on July 1. This increase of 15,307 workers or 1.6 per cent continued the moderately forward movement that with but one interruption has characterized the industrial situation since the beginning of 1935, the only general decline since January 1 having been that of a seasonal nature on April 1. The level of employment, considerably higher than at the opening of the year, was also higher than in any month of 1934, 1933, or 1932; the index, at 101.1 on August 1, was over seven per cent above that of 94.4 indicated on

January 1, and compared favourably with the August 1, 1934, 1933 and 1932 index numbers of 99.9, 87.1 and 86.3, respectively. The experience of the last fourteen years indicates that employment usually, though not invariably, gains at the beginning of August, there being on the average a fractional increase in the index. After correction for seasonal influences, the August 1 index therefore advanced, standing, when adjusted, at 96.8, as compared with 95.9 in the preceding month.

As already stated, the unadjusted employment index, calculated on the 1926 average as 100, stood at 101.1 at the beginning of August, 1935, compared with 99.5 in the preceding month, while on August 1 in the fourteen preceding years, the crude index was as follows: 1934, 99.9; 1933, 87.1; 1932, 86.3;

1931, 105.2; 1930, 118.8; 1929, 127.8; 1928, 119.3; 1927, 110.5; 1926, 105.5; 1925, 97.5; 1924, 95.8; 1923, 101.4; 1922, 94.2 and 1921, 90.0.

The increase at the beginning of August occurred largely in manufacturing, construction and maintenance and transportation, while mining, communications and services also showed improvement. On the other hand, logging and retail trade reported seasonal curtailment. Employment in all the main industrial groups, except logging and construction, was in greater volume than at the beginning of August of last year; the

than in the preceding month. Building construction, coal-mining and services recorded heightened activity at the beginning of August, 1935; within the manufacturing group, lumber mills showed moderate increases, but fish-preserving and textile factories were slacker, the losses being mainly seasonal in character. Logging also reported a decided contraction, resulting from between-seasonal dullness. The general index, at 106.7, was higher than at the beginning of August of last year, when improvement had been indicated; it was also higher than at August 1 in 1933 and 1932, and practically the same as in 1931.

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

falling-off in the latter in this comparison was in work on the highways, both building and railway construction being more active.

#### Employment by Economic Areas

Activity increased in Quebec, the Prairie Provinces and British Columbia; in the Maritime Provinces no general change occurred, while there were moderate reductions in personnel in Ontario. Employment in all economic areas except Ontario was in greater volume than at the same date of the last three years.

*Maritime Provinces.*—Statements were tabulated from 676 firms in the Maritime Provinces employing 76,197 persons, or 54 more

*Quebec.*—Continued improvement was shown in Quebec, according to returns from 2,233 employers with 267,275 workers, as against 260,442 on July 1. The level of employment was considerably higher than on August 1, 1934, when a much smaller advance had been made; the index at the latest date, standing at 97.2, was rather more than two points higher than in the same month of last summer. Manufacturing, mining, local transportation, building and highway construction, hotels and restaurants and wholesale trade reported increased employment on the date under review, while the only general decline of any size was in retail trade; within the manufacturing division, there were consider-

able gains in leather, lumber, vegetable food, pulp and paper, clay, glass and stone, electric current and non-metallic mineral plants.

*Ontario.*—Industrial employment in this province showed a slight seasonal decline, the 4,119 firms co-operating on August 1 having 392,517 employees, or 757 fewer than at July 1. The loss was smaller than that recorded, on the average, in the years since 1920. Most of the reduction occurred in trade, construction and manufacturing; within the group of factory employment, iron and steel showed pronounced seasonal curtailment, and rubber, tobacco and beverage, chemical and miscellaneous manufacturing works were also slackier, while leather, fur, food, lumber, pulp and paper, electric current and electrical apparatus factories reported improvement. Logging, mining and transportation also indicated considerably heightened activity. Employment on August 1, 1934, had shown a much greater decline as compared with the preceding month, but the index number was then rather higher, standing at 106.0, as compared with 102.4 at the latest date.

*Prairie Provinces.*—Employers in the Prairie Provinces reported continued improvement; the 1,361 employers making returns had 124,672 workers, as compared with 121,658 at the beginning of July. The gains took place mainly in highway and building construction, transportation, services and trade, while employment in manufacturing showed practically no general change, and logging, mining and railway construction released employees. The level of employment was higher than on August 1 last year, the index standing at 98.7, compared with 93.0 on the same date in 1934.

*British Columbia.*—Further marked expansion was registered in British Columbia, mainly in manufacturing, while services, transportation and construction also showed considerably heightened activity; logging and coal mining, however, were slackier. Within the manufacturing division, the greatest gains occurred in fish and fruit and vegetable canneries. Returns were compiled from 998 firms employing 89,279 persons, or 6,163 more than in the preceding month. A much smaller

Aug. 1.....	101.1	106.7	97.2	102.4	98.7	106.8
Relative Weight of Employment by Economic Areas as at Aug. 1, 1935.....	100.0	8.0	28.2	41.3	13.1	9.4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

increase had been indicated at the beginning of August of last year, and the index, at 106.8 at the latest date, was over nine points higher than on the same date in 1934, being also higher than at August 1 in any of the preceding three years.

Index numbers by economic areas are given in Table 1.

### Employment by Cities

Employment increased in five of the eight cities for which separate tabulations are made; Montreal, Quebec City, Hamilton, Winnipeg and Vancouver showed improvement, while in Ottawa, Windsor and Toronto, curtailment was indicated. The situation in all these centres was better than at the same date of last year, or of the preceding two years.

*Montreal.*—There was an increase in Montreal on the date under review, for which the 1,300 co-operating firms reported a combined payroll of 130,659 employees, or 850 more than on July 1. Manufacturing, building construction, wholesale trade and transportation registered improvement, but road construction and retail trade showed reduced

activity. Within the group of factory employment, textiles were seasonally quiet, but leather, musical instruments, pulp and paper, clay, glass and stone, non-ferrous metal and non-metallic mineral factories afforded more employment. On the whole, activity was rather greater than on August 1, 1934, when a decrease had been indicated.

*Quebec.*—Further improvement was reported in Quebec City, where manufacturing, transportation, construction and services recorded greater activity. Statements were received from 166 employers whose staffs aggregated 13,245 workers, compared with 12,997 in the preceding month. A rather larger gain had taken place on August 1 of a year ago, when the index was slightly lower.

*Toronto.*—There was a falling-off in activity in Toronto, according to data from 1,394 firms employing 118,593 persons, or 675 fewer than at the beginning of July. The decline was largely seasonal, employment having been reduced on August 1 in eleven of the fourteen years for which statistics are available; the contraction this year was decidedly smaller than on the same date in 1934, being also less

Aug. 1.....	87.2	100.9	97.2	104.3	95.4	106.6	90.6	101.7
Relative Weight of Employment by Cit- ies as at Aug. 1, 1935	13.8	1.4	12.5	1.4	3.2	1.5	4.1	3.4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

than the average loss recorded in the years 1922-1934. The index was higher than at the beginning of August in any of the years since 1931. Manufacturing showed a slight gain as compared with July 1, there being reductions in textile and iron and steel factories, but increases in electrical apparatus and other works. Trade was also affected by mid-summer dullness; on the other hand, transportation and construction showed improvement.

*Ottawa.*—Employment in Ottawa declined, 222 persons being released from the forces of the 174 co-operating employers, who had 13,415 workers on August 1. There was a gain in services, but trade and construction were slacker and other industries showed, on the whole, only small changes. Employment at the beginning of August, 1934, had increased, but the index then was slightly lower.

*Hamilton.*—There were further additions to staffs in Hamilton, 271 establishments reporting 30,516 persons on their pay lists, as against 30,014 in their last return. Manufacturing showed an increase, mainly in elec-

trical apparatus and iron and steel works, and there were minor gains in transportation and services. Employment was more active than on the same date of last year, when a smaller advance had been noted.

*Windsor.*—The trend of employment continued downward in Windsor and the other cities united with it; statistics were received from 164 firms employing 14,435 workers, or 917 fewer than on July 1. Automobile and iron and steel works considerably reduced their working forces, and food and other manufacturing establishments and construction were also slacker. The situation had shown little general change on August 1, 1934, as compared with the preceding month, but the index on the latest date was higher than it was at mid-summer of last year, or indeed, than in any of the years since 1930.

*Winnipeg.*—A further increase was indicated in Winnipeg, according to 454 firms who had 38,803 employees, as compared with 38,166 at the beginning of July. There was a falling-off in manufacturing as a whole; construction, transportation and trade, however, showed

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
Aug. 1, 1921.....	90.0	88.0	58.3	95.2	92.0	94.8	88.7	89.9	90.7
Aug. 1, 1922.....	94.2	92.9	50.4	100.6	88.6	103.0	103.9	87.5	89.4

Nov. 1.....	100.2	92.8	171.9	121.2	80.7	83.9	111.0	114.9	121.3
Dec. 1.....	98.9	91.3	198.6	122.9	79.8	80.1	100.3	115.2	126.0
Jan. 1, 1935.....	94.4	87.4	181.3	119.1	78.6	76.2	87.9	115.2	130.6
Feb. 1.....	94.6	90.1	183.4	120.3	77.8	76.2	87.2	111.9	116.6
Mar. 1.....	96.4	92.7	166.9	118.8	77.5	76.5	94.2	111.7	116.7
Apr. 1.....	93.4	93.9	104.3	117.7	77.7	76.3	80.2	111.4	117.4
May 1.....	95.2	95.6	93.9	116.2	77.5	80.1	84.7	116.4	119.3
June 1.....	97.6	98.4	96.0	119.2	79.2	79.9	89.5	118.5	119.9
July 1.....	99.5	98.5	82.2	121.5	80.8	82.7	101.1	123.6	122.1
Aug. 1.....	101.1	99.8	79.0	125.2	81.6	85.4	104.7	127.9	120.7
Relative Weight of Employment by Industries as at Aug. 1, 1935.....	100.0	52.9	2.3	6.0	2.3	10.7	12.9	2.9	10.0

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

gains. A favourable trend had also been in evidence on the same date of last year, but employment was then at a lower level.

*Vancouver.*—In Vancouver, manufacturing, transportation, services and trade showed improvement, but construction was slacker. Returns were compiled from 407 employers with 32,276 persons on their staffs, as compared with 31,705 in the preceding month. A similar gain had been indicated on August 1, 1934, but the index of employment was then over ten points lower than at the latest date, when it stood at 101.7.

Index numbers of employment by cities are given in Table 2.

### Employment by Manufacturing Industries

Further improvement took place on August 1 in manufacturing establishments, 5,569 of which reported 501,930 operatives on their payrolls, as compared with 495,125 on July 1. Em-

ployment in this group has, on the average, shown an advance on August 1 in the experience of the years since 1920; the increase this year was decidedly above the average, also considerably exceeding that noted at the beginning of August in 1934. The crude index stood at 99.8 (the highest since May 1, 1931), while in the preceding month it was 98.5, and on August 1 in other years of the record was as follows: 1934, 94.2; 1933, 85.2; 1932, 82.6; 1931, 94.7; 1930, 110.2; 1929, 121.6; 1928, 115.2; 1927, 107.0; 1926, 103.6; 1925, 95.8; 1924, 93.3; 1923, 101.2; 1922, 92.9 and 1921, 88.0. After correction for seasonal variation, the index rose from 95.9 on July 1, to 97.0 at the latest date; this was the highest point in forty-nine months.

The firms reporting for August 1, 1935, showed the seventh consecutive gain recorded in as many months; during this period, the co-operating manufacturers have enlarged their

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Aug. 1, 1935	July 1, 1935	Aug. 1, 1934	Aug. 1, 1933	Aug. 1, 1932	Aug. 1, 1931	Aug. 1, 1930

Clay, glass and stone products.....	1.0	83.6	81.2	76.6	63.8	71.2	109.1	134.3
Electric current.....	1.5	115.4	113.5	113.9	111.7	116.9	131.4	134.3
Electrical apparatus.....	1.4	118.6	110.6	103.7	87.4	105.7	131.3	155.5
Iron and steel products.....	11.2	81.0	83.4	73.7	63.0	64.3	80.7	104.8
Crude, rolled and forged products.....	1.3	100.6	100.7	88.3	66.9	54.2	87.9	110.4
Machinery (other than vehicles).....	1.1	92.6	91.2	81.0	65.4	72.5	95.1	118.8
Agricultural implements.....	0.5	59.1	59.6	39.4	35.2	23.4	34.7	63.4
Land vehicles.....	5.0	77.6	82.7	74.0	66.4	69.1	76.6	100.9
Automobiles and parts.....	1.6	109.2	131.0	99.2	73.3	72.5	52.9	100.8
Steel shipbuilding and repairing.....	0.2	62.5	58.5	47.5	43.2	69.8	80.5	116.4
Heating appliances.....	0.5	99.6	98.3	89.2	71.0	64.3	96.1	116.6
Iron and steel fabrication (n.e.s.).....	0.5	76.3	76.1	65.5	49.3	61.6	115.3	152.8
Foundry and machine shop products.....	0.5	87.2	91.3	80.1	62.3	71.0	80.2	101.0
Other iron and steel products.....	1.6	80.9	81.8	76.8	67.8	67.7	86.6	105.4
Non-ferrous metal products.....	2.0	122.3	122.6	110.2	89.5	73.3	111.2	130.1
Non-metallic mineral products.....	1.5	140.3	138.1	137.6	125.7	120.6	129.2	145.3
Miscellaneous.....	0.6	119.3	123.8	114.8	96.3	97.2	108.1	109.2

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

staffs by nearly 63,000 persons, while the index has risen by rather better than twelve points since the opening of the year, a percentage of 14.2. It is also noteworthy that the index at the beginning of August was 5.9 per cent higher than on August 1, 1934, while it was 34.1 per cent higher than the January 1, 1933, index of 74.4, the low point in manufacturing employment in this record of nearly fifteen years.

Improvement was indicated on the date under review in the leather, lumber, musical instruments animal and vegetable food, pulp and paper, clay, glass and stone, electric current, electrical apparatus and mineral product industries; the seasonal gains in fish and fruit and vegetable canning were most extensive. On the other hand, declines took place in rubber, textile, chemical, iron and steel and miscellaneous manufactured product factories. Among these also, the greatest losses were seasonal in character, occurring in iron and steel.

*Animal Products.*—Fish-canning and dairy factories registered gains, while fish-smoking and curing plants were slightly slacker; the gains in canneries were very extensive, resulting in a large increase, on the whole, in the animal food group over July 1. Statistics were received from 306 firms employing 26,996 workers, as compared with 23,846 in the preceding month. The trend on August 1 in other years of the record has frequently been downward; the index on the date under review, at 142.3, was higher than at the beginning of August in any other year of the record, comparing favourably with that of 132.6 noted on August 1, 1934.

*Leather and Products.*—Expansion was shown in employment in the leather group, 923 persons being added to the staffs of the 283 co-operating manufacturers, who employed 21,859 on August 1. Most of the improvement occurred in shoe factories in Quebec and Ontario. A rather smaller gain had been reported by the firms making returns for the same date a year ago, when the index of employment was several points lower.

*Lumber and Products.*—Rough and dressed lumber mills were decidedly busier, and there was also an increase in furniture factories, while other divisions reported moderate curtailment. The lumber industry as a whole registered a considerable advance; the payrolls of the 818 firms furnishing data aggregated 43,556 operatives, as against 42,621 in their last report. There were increases in all but the Prairie Provinces, where no general change was indicated. Activity in the lumber group as a whole was greater than on August

1, 1934, when only a minor gain had been recorded.

*Musical Instruments.*—Employment in musical instrument factories was better than in the preceding month, being at practically the same level as in the corresponding month of last year. Statements were received from 35 manufacturers who had enlarged their payrolls by 170 persons to 1,173 on August 1, 1935.

*Plant Products, Edible.*—Important additions to staffs were registered in fruit and vegetable canneries, while sugar refineries and some other classes in this group were also busier; 447 employers in the vegetable food industries reported 33,020 workers, or 3,137 more than at the beginning of July. The increase took place largely in Quebec, Ontario and British Columbia. Employment was in slightly less volume than on August 1, 1934, although smaller gains had then been indicated.

*Pulp and Paper Products.*—Pulp and paper mills reported considerably heightened activity, and there were also gains in paper products and printing and publishing. Statistics were received from 587 manufacturers whose payrolls were increased by 1,054 persons to 59,522 on August 1. Most of the advance was in Quebec and Ontario. A minor gain only had been noted in the corresponding month last summer, but the index was then rather lower, standing at 95.8, as compared with 98.3 on August 1, 1935.

*Rubber Products.*—There was a decrease in rubber works, 51 of which had 11,235 persons on their payrolls, compared with 11,697 on July 1. The loss (which took place chiefly in Ontario), exceeded that noted at the beginning of August of a year ago, when the level of employment was higher.

*Textile Products.*—Cotton, woollen, headwear and other textile factories recorded increased working forces, but garment and hosiery and knitting mills were seasonally slacker; there was, on the whole, a decline of 303 persons in the staffs of the 980 co-operating manufacturers, who employed 94,070. Most of the reduction was in the Maritime Provinces and Quebec. Larger decreases had been noted at the beginning of August, 1934, when the index stood at 106.0, compared with 109.9 on the date under review.

*Other Plant Products.*—Data were received from 168 establishments in these industries, whose payrolls, aggregating 15,433 on August 1, showed only a slight increase since July 1. There were gains in beverage factories, but losses in tobacco works. The index on the same date last year was lower, although improvement had then been noted.

*Chemicals and Allied Products.*—A small contraction was reported in chemical plants at the beginning of August, 172 persons having been released since the preceding month from the payrolls of the 195 co-operating manufacturers, who employed 10,479 workers. The index was higher by some eleven points than on August 1, 1934, when a rather larger reduction had been indicated.

*Clay, Glass and Stone Products.*—Further additions to staffs were reported in the building material industries, according to 197 employers with 9,246 workers, or 256 more than in their last report. The largest increases were in Quebec. Employment was in greater volume than on the same date last summer, when much smaller gains had taken place.

*Electric Current.*—Considerable improvement was noted in electric current works, 97 of which reported 14,565 employees, compared with 14,299 on July 1. The index number on the date under review was rather higher than on August 1, 1934, although a large gain had then been recorded.

*Electrical Apparatus.*—Employment in 111 electrical apparatus plants showed an important increase at the beginning of August; they employed 13,008 operatives, or 871 more than in the preceding month. The situation was better than on August 1 of last year, when a very small advance had been indicated.

*Iron and Steel Products.*—Crude, rolled and forged, machinery, steel shipbuilding, heating appliance and some other factories reported minor improvement, while land vehicle, wire, tool and foundry and machine shops showed declines, those in automobile factories being pronounced. A combined labour force of 106,808 persons was indicated by the 836 co-operating manufacturers, who had 109,882 on July 1. Firms in Ontario recorded the largest losses, while the trend was upward in Quebec and British Columbia. A smaller decline had been noted at the beginning of August in 1934; the index then, however, was some seven points lower than on the date under review.

*Non-ferrous Metal Products.*—Little general change in staffs was recorded in this group on August 1, according to the 156 firms furnishing data, who employed 19,357 workers, compared with 19,372 in the preceding month. There were decreases in the aluminum products division, offsetting gains in smelters and refineries. Employment was in much greater volume than on August 1 of a year ago, when a larger reduction had been indicated as compared with the preceding month.

*Mineral Products.*—Statistics tabulated from 128 manufacturers of mineral products showed that they employed 13,804 workers, or 184 more than in their last report. The index was rather higher than on the same date in 1934, when little general change had been indicated.

### Logging

Seasonal dullness affected employment in logging camps in the Maritime and Western Provinces, while improvement was indicated in Ontario. Statements were tabulated from 286 firms throughout the Dominion, employing 21,913 persons, or 989 fewer than in the preceding month. Smaller losses had been reported on August 1, 1934, when the index stood at 84.5, as compared with 79.0 on the date under review; these two indexes are higher than at the beginning of August in any other year for which data are available.

### Mining

*Coal.*—There was an increase of 450 employees in the staffs of the 100 operators furnishing returns, bringing them to 22,626 on August 1, 1935. The improvement was confined to the Eastern coal fields, there being declines in Western mines. A larger gain on the whole had been registered on the same date of last year, when the index was a few points lower.

*Metallic Ores.*—An important advance was recorded in metallic ore mines, in which employment was decidedly more active than at the beginning of August of last year. Returns were received from 170 firms, with 27,506 workers, as compared with 26,547 in their last report. Improvement was shown in all except the Prairie Provinces, that in Quebec and Ontario being greatest.

*Non-Metallic Minerals (Other than Coal).*—A further advance was noted in this division, in which 82 employers enlarged their payrolls by 308 persons to 7,290 at the beginning of August. Employment was at a higher level than in the same month last summer, or indeed, than in August of any other year since 1930.

### Communications

There was an increase in the personnel of telephone and telegraph companies on August 1; the communication firms co-operating with the Dominion Bureau of Statistics had 21,608 employees, as against 21,388 in the preceding month. The number engaged in this group was very slightly greater than on August 1 of a year ago, when a gain had also been noted.

### Transportation

*Street Railway and Cartage.*—An advance was registered in this division, according to data received from 209 employers with 26,002 workers, as against 25,333 on July 1. A smaller increase had been recorded on August 1, 1934, when the index of employment was several points lower.

*Steam Railway Operation.*—The trend of employment in steam railway operation was favourable in Ontario and the Western provinces; the 101 companies and divisional superintendents furnishing data throughout the Dominion reported 59,438 employees, compared with 57,684 in their last report. A less extensive increase had occurred on the same date in 1934, and the index was then fractionally lower.

*Shipping and Stevedoring.*—Statements were tabulated from 99 companies in this group, employing 15,805 workers, or 842 more than on July 1, 1935. There were gains in Ontario and British Columbia. A smaller advance had been noted at the beginning of August a year ago; employment in shipping was then not quite so active.

### Construction and Maintenance

*Building.*—Considerable increases were again reported in building construction, 680 contractors adding 1,332 persons to their staffs, bringing them to 24,589 at the beginning of August. There were advances in all provinces except Ontario. Employment was brisker than in the same month of 1934, when greater improvement had been indicated.

*Highway.*—The number engaged on highway construction and maintenance showed a further increase, mainly in Quebec and the Western Provinces. Data were received from 357 employers with 66,197 workers on their payrolls, as compared with 62,866 at the

beginning of July. A decline had taken place on August 1, 1934, but employment on road work was then in much greater volume.

*Railway.*—A falling-off was recorded in this group on August 1, 1935, when 35 companies and divisional superintendents reported that they had 32,142 men on their staffs, compared with 32,507 in the preceding month. There were contractions in all provinces except British Columbia. The index number was several points higher than at the beginning of August of a year ago, when improvement had been noted.

### Services

Continued gains occurred in the service group, mainly in hotels and restaurants; 453 firms employed 27,548 persons, compared with 26,536 at the beginning of July. Less pronounced improvement had been recorded on August 1, 1934; the index was then lower by nearly five points.

### Trade

There was a seasonal falling-off in employment in retail trade, but wholesale houses were more active, according to 1,161 trading establishments, which employed 95,346 workers, as compared with 96,367 on July 1. Ontario reported most of the decline. Greater seasonal losses had occurred at the beginning of August last year, and the index then was a few points lower.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of July, 1935

The term unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle owing to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the reports upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There was a further, though nominal, increase in work afforded local trade union members at the end of July as was indicated by the returns tabulated from 1,723 labour organizations with a total of 164,357 members. Of these, 24,736 or a percentage of 15.1 were unemployed in contrast with 15.4 per cent in June. Improvement in greater measure was reflected from July of last year when 17.9 per cent of idleness was recorded. Nova Scotia unions registered a 4 per cent gain in activity from June, the coal mines which in the previous month had reported shut-downs, affording considerably more em-

ployment, though there was a general betterment of conditions throughout the province. In Quebec, employment advances in the garment trades accounted mainly for the improved situation, while in Manitoba and Saskatchewan greater activity in steam railway operation was the chief factor in the expansion noted. Conditions in New Brunswick and British Columbia varied but slightly from June, though the trend was favourable. Ontario unions, however, reported some curtailment of employment from the preceding month, the textile and building and construction trades particularly showing retarded activity. Unlike Nova Scotia, the coal mines of Alberta were reported very quiet, affecting

with the exception of Prince Edward Island is tabulated separately each month. During July, activity for Halifax members rose substantially from June, and in Montreal moderate expansion was noted. Employment increases, on a small scale, were recorded from Winnipeg, while the Vancouver gains from June were less than 1 per cent. Pronounced curtailment, however, was evident among Edmonton and Toronto members, and activity for Saint John members subsided slightly. In Regina the percentage of idleness remained identical with that of June. When making a comparison with the returns for July of last year important employment recovery was apparent among Edmonton unions

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

the situation in the province as a whole from June adversely. New Brunswick unions alone indicated a slowing up of industrial activity when compared with July of last year, which was, however, slight. Of the gains in employment in the remaining provinces that of over 5 per cent in Quebec was the most pronounced, the garment and building and construction trades affording a much better volume of work. Advancement on a slightly smaller scale was recorded in Manitoba and British Columbia, while the Ontario situation improved by 2 per cent from July last year, Nova Scotia, Saskatchewan and Alberta unions showing increases of minor importance.

Unemployment affecting local trade union members in the largest city in each province

during the month reviewed, and in Montreal the situation was also decidedly better. Increases in available work of more moderate proportions was reflected by Winnipeg, Regina and Vancouver members, and Toronto conditions improved but slightly. In Saint John there was a considerable drop in work afforded from July last year, Halifax showing employment recessions of much lesser degree.

As will be noticed from the chart which accompanies this article, the curve at the close of July showed little change in level from June, though the trend was favourable. Wider deviation was shown in the course traced by the curve from July last year, tending toward a greater betterment of conditions than was indicated over June.

The situation in the manufacturing industries during July varied but slightly from the previous month, though the trend was toward a greater employment volume, as manifest by the reports tabulated from 465 unions, involving a membership of 52,003 persons. Of these, 8,088 or a percentage of 15.6 were without work at the end of the month in contrast with 15.9 per cent in June. Improvement of greater proportions was noted from July of last year when 18.1 per cent of idleness was recorded. Glass workers and metal polishers, whose combined membership was slight, were substantially better engaged than in June, and among general labourers noteworthy gains occurred. The garment trades, which in Quebec reported recovery from the slackness shown during June, in Ontario were considerably quieter, offsetting largely the Quebec gain. Among meat cutters and butchers there was moderate expansion during July, cigarmakers showing a slightly better situation, while fractional increases only were reflected in the iron and steel trades, and among leather and wood workers and papermakers. Of the declines, the most important were registered by hat and cap makers who suffered severe losses in work available, particularly in Ontario. Recessions of much lesser magnitude, though noteworthy, were indicated by textile and carpet workers, and activity for brewery workers, bakers and confectioners, and printing tradesmen subsided very slightly from June. Jewellery and fur workers, however, maintained the same level of unemployment as in June. Compared with the returns for July of last year in the manufacturing industries, employment was much better maintained during the month reviewed among metal polishers, general labourers and wood workers, and important gains were noted in the garment, and iron and steel trades. Activity for papermakers, printing tradesmen, and textile and carpet workers also tended upward, though the changes were rather slight. Conditions for hat and cap, jewellery and glass workers, however, were much more depressed during the period surveyed, and the level of activity for cigarmakers, bakers and confectioners, leather and fur workers showed a considerable drop. Among brewery workers, and meat cutters and butchers the recessions apparent were quite small.

Employment for coal miners eased off very slightly during July from the previous month, though a favourable tendency was noted from July last year. The changes, however, were small. Reporting for July were 52 unions of these workers with a membership aggregate of 16,596 persons, 3,166 of whom were unemployed at the end of the month, a percentage

of 19.1 as contrasted with percentages of 18.8 in June and 20.2 in July, 1934. The Nova Scotia mines, which in June had shown slackness due to mine closings, during July indicated an improved situation. In Alberta, however, several mines were reported to be practically at a standstill, causing a considerable increase in unemployment. In British Columbia also minor contractions in activity occurred. As in the previous comparison,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

July, 1935.....	8.1	7.8	19.0	14.3	11.6	7.5	23.2	11.6	15.1

greater depression was evident among Alberta miners than in July a year ago, offsetting largely the improvement on a small scale registered in both Nova Scotia and British Columbia. In addition to the total unemployment reported, many of these unions showed a large proportion of their working membership on short time.

Activity in the building and construction trades was somewhat retarded during July, the 184 associations making returns with 17,162 members, showing an unemployment percentage of 46·3 as contrasted with 44·5 per cent in June. Conditions, however, were substantially improved from July of last year when 57·0 per cent of the members reported were without work. Granite and stonecutters, and tile layers, lathers and roofers were much busier than in June, and pronounced gains were evident among bridge and structural iron workers. Increases in employment on a moderate scale were reflected by bricklayers, masons and plasterers, and the situation for steam shovelmen and plumbers and steamfitters was slightly better. On the contrary, electrical workers, and hod carriers and building labourers suffered large losses in work afforded, and noteworthy recessions were apparent among carpenters and joiners. The trend for painters, decorators and paperhangers was also less favourable, though the change from June was slight. Contrasted with the returns for July, 1934, steam shovelmen, bridge and structural iron workers, bricklayers, masons and plasterers, granite and stonecutters, tile layers, lathers and roofers, and hod carriers and building labourers were all decidedly better engaged during the month surveyed. Important advancement was also noted by carpenters and joiners, and plumbers and steamfitters, and increases in activity on a much smaller scale by painters, decorators and paperhangers. Electrical workers were the only tradesmen to report a falling off in employment from July a year ago, which was rather pronounced.

A more favourable employment movement was noted in the transportation industries during July, both when compared with the previous month and July a year ago, according to the reports tabulated from 768 associations, involving 55,055 members. Of these, 3,674 or 6·7 per cent were idle at the end of the month, as compared with percentages of 7·7 in June and 8·2 in July, 1934. Activity for steam railway employees, whose returns constituted over 77 per cent of the entire group membership reported, was at a slightly higher level in both comparisons, as was also the case among street and electric railway employees. Navigation workers reported a

nominal drop in employment from June, though conditions were much better than in July last year. The percentage of idleness for teamsters and chauffeurs remained the same as at the close of June, some slight curtailment of activity being evident from July, 1934.

The 5 unions of retail shop clerks furnishing reports in July, with 1,751 members, showed that 159 or a percentage of 9·1 were idle at the close of the month in contrast with percentages of 10·3 in June and 6·3 in July a year ago.

A fractional decline in the volume of work accorded civic employees was noted during July when a contrast is made with the returns of the previous month, though the situation showed some improvement from July, 1934. This was manifest by the reports received from 76 associations, combining 7,916 members, 244 or 3·1 per cent of whom were without work at the end of the month as compared with 2·8 per cent in June and 3·6 per cent in July a year ago.

The miscellaneous group of trades indicated somewhat heightened activity during July from the previous month, and increases in employment on a more pronounced scale were recorded from July, 1934. Reports for the month reviewed were forwarded by 126 unions, with a total of 4,514 members, 579 of whom were unemployed at the end of the month, a percentage of 12·8 contrasted with percentages of 14·7 in June and 17·6 in July, 1934. Hotel and restaurant employees, stationary engineers and firemen, and unclassified workers were all afforded a somewhat better volume of work than in June, while among theatre and stage employees, and barbers, activity was at a slightly lower level. Stationary engineers and firemen reported noteworthy employment expansion when compared with the returns for July of last year, and advances on a smaller scale were recorded by unclassified workers, and hotel and restaurant employees. Minor contractions were registered by barbers, while theatre and stage employees indicated a practically unchanged situation.

Employment for fishermen was brisk during July, showing little change from either the preceding month or July last year, the tendency, however, being upward in both comparisons. Reports were tabulated for July for 3 unions of these workers, with 585 members, 0·9 per cent of whom were idle at the end of the month as compared with 1·2 per cent in June, and 1·9 per cent in July, 1934.

The situation for lumber workers and loggers was somewhat less favourable during July than in the previous month, unemployment standing at 7·3 per cent as compared

with a percentage of 5.1 in June. Recessions of greater magnitude, however, were shown from July last year when 2.4 per cent of the members reported were idle. The percentage for the month reviewed was based on the reports tabulated from 4 unions of these workers, with a total of 626 members.

Table I shows by provinces the percentage of members who were on an average un-

employed each year from 1919 to 1934 inclusive, and also the percentage of unemployment by provinces for July of each year from 1919 to 1932 inclusive, and for each month from January, 1933, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for July, 1935.

The volume of business transacted by the offices of the Employment Service of Canada during July, 1935, showed a gain of nearly 18 per cent in the average daily placements when compared with June, 1935, but a loss of almost 7 per cent in comparison with those effected during the corresponding month a year ago. Gains over last month were reported in farming, construction and mainten-

trade and mining. Nominal gains only appeared in manufacturing and transportation.

The accompanying chart shows the trend of employment since January, 1933, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

ance, services, manufacturing and mining, the highest of which were in farming and construction and maintenance. Losses were registered in trade, transportation and logging, none of which was outstanding. When compared with July a year ago, a substantial increase was noted in farming, but this was more than offset by the loss shown in construction and maintenance. Decreased placements were also recorded in logging, services,

from the graph that the curve, both of vacancies and of placements in relation to applications, followed a decidedly upward trend throughout the month, and at its close had attained a level about 10 points higher than that reached at the end of July a year ago. The ratio of vacancies to each 100 applications was 59.8 during the first half and 66.0 during the second half of July, 1935, in contrast with the ratios of 63.7 and 56.2

during the corresponding periods of 1934. The ratios of placements to each 100 applications during the periods under review were 56.0 and 62.2 as compared with 60.9 and 53.7 during the corresponding month of 1934.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1935, was 1,353, as compared with the daily average of 1,425 during the corresponding month a year ago and with 1,156 recorded daily in June, 1935.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,146, in comparison with 2,390 in July, 1934. Applications for work during the preceding month of 1935 averaged 2,131 daily.

The average number of placements made daily by the offices of the Service during July, 1935, was 1,271, of which 804 were in regular employment and 467 in work of one week's duration or less, as compared with a total daily average of 1,079 during the preceding month. Placements in July a year ago averaged 1,362 daily, consisting of 776 in regular and 586 in casual employment.

During the month of July, 1935, the offices of the Service referred 34,731 persons to vacancies and effected a total of 33,043 placements. Of these, the placements in regular employment were 20,907, of which 16,246 were of men and 4,661 of women, while placements in casual work totalled 12,136. The number of vacancies reported by employers was 25,771 for men and 9,397 for women, a total of 35,168, while applications for work numbered 55,778, of which 42,799 were from men and 12,979 from women. Reports for June, 1935, showed 27,721 positions available, 51,129 applications made, and 25,889 placements effected, while in July, 1934, there were recorded 35,621 vacancies, 59,727 applications for work, and 34,046 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1925, to date:—

Year	Placements		
	Regular	Casual	Totals
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934.....	223,564	182,527	406,091
1935 (7 months).....	113,437	74,308	187,745

## NOVA SCOTIA

Employment opportunities, as indicated by orders received at Employment Offices in Nova Scotia during July, were over 13 per cent better than in the preceding month and over 12 per cent above the corresponding month of last year. There was a gain also in placements of nearly 13 per cent when compared with June and of nearly 14 per cent in comparison with July, 1934. Except for nominal declines in construction and maintenance and manufacturing, all industrial divisions showed gains in placements over July of last year, the largest being in logging and services. Industrial divisions in which most of the placements were effected during the month were: logging, 112; construction and maintenance, 563; and services, 285, of which 199 were of household workers. Placements in regular employment numbered 361 of men and 105 of women.

## NEW BRUNSWICK

During July, positions offered through Employment Offices in New Brunswick were nearly 10 per cent less than in the preceding month, but nearly 8 per cent above the corresponding month of last year. Placements were nearly 11 per cent less than in June, but over 7 per cent more than during July, 1934. There was an increase in placements in household services and manufacturing when compared with July of last year, but declines were reported in logging, construction and maintenance and farming. Placements by industrial divisions included: manufacturing, 48; logging, 40; construction and maintenance, 249; and services, 565, of which 458 were of household workers. During the month 296 men and 109 women were placed in regular employment.

## QUEBEC

There was an increase of over 5 per cent in the number of positions offered through Employment Offices in the Province of Quebec when compared with the preceding month and of nearly 25 per cent in comparison with the corresponding month of last year. Placements also were 8 per cent higher than in June and over 26 per cent above July, 1934. When comparing placements during the month under review with July of last year by industrial divisions, the most important change was a substantial gain under construction and maintenance. Small increases were also reported in manufacturing and farming and losses in logging, services and trade. Placements by industrial divisions included: manufacturing, 149; logging, 192; farming, 161; construction and maintenance, 1,581; trade, 121, and services, 1,964, of which 1,747 were of household

workers. There were 2,190 men and 1,468 women placed in regular employment during the month.

#### ONTARIO

Orders received at Employment Offices in Ontario during July called for 32 per cent more workers than in the preceding month, but over 13 per cent less than during the corresponding month of last year. There was a gain of nearly 34 per cent in placements when compared with June, but a loss of over 13 per cent in comparison with July, 1934. The decline in placements from July of last year was due to a substantial reduction in relief placements on highway construction, but this loss was largely offset by a heavy increase in farm placements. Reduced placements were reported in all other groups, the two most important being in services and logging. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 468; logging, 928; farming, 3,260; transportation, 93; construction and maintenance, 7,220; trade, 194; and services, 3,418, of which 2,122 were of household workers. Placements in regular employment numbered 6,562 of men and 1,600 of women.

#### MANITOBA

The demand for workers, as indicated by orders received at Employment Offices in Manitoba during July, was nearly 98 per cent greater than in the preceding month and nearly 7 per cent above the corresponding month of last year. Placements also were about 100 per cent higher than in June, but less than 2 per cent above July, 1934. The gain over July of last year was small, as increased placements in farming and services were nearly offset by declines in construction and maintenance and logging. The changes in other groups were unimportant. Placements by industrial divisions included: farming, 1,535; construction and maintenance, 388; and services, 688, of which 548 were of household workers. During the month 1,907 men and 371 women were placed in regular employment.

#### SASKATCHEWAN

During July, orders received at Employment Offices in Saskatchewan called for nearly 66 per cent more workers than in the preceding month and 26 per cent more than during the corresponding month of last year. There was a gain also in placements of over 48 per cent when compared with June and over 5 per cent in comparison with July, 1934. The only gains of importance in placements over July of last year were in farming and services. These increases were offset in part by fewer place-

ments under construction and maintenance. Industrial divisions in which most of the placements were effected during the month were: farming, 937; construction and maintenance, 181; and services, 879, of which 533 were of household workers. There were 1,122 men and 431 women placed in regular employment during the month.

#### ALBERTA

There was an increase of nearly 20 per cent in the number of positions offered through Employment Offices in Alberta when compared with the preceding month, and of nearly 43 per cent in comparison with the corresponding month of last year. Placements also were nearly 19 per cent higher than in June and 42 per cent above July, 1934. There was a large increase in placements under construction and maintenance, when compared with July of last year, which accounted for the gain under this comparison. Small gains, however, were also reported in all other divisions, except logging, where a nominal decline only was shown. Placements by industrial divisions included: farming, 767; construction and maintenance, 1,370; and services, 500, of which 400 were of household workers. During the month 1,635 men and 330 women were placed in regular employment.

#### BRITISH COLUMBIA

Opportunities for employment, as indicated by orders received at Employment Offices in British Columbia during July, were nearly 13 per cent better than in the preceding month, but nearly 15 per cent less favourable than during the corresponding month of last year. There was a gain of nearly 14 per cent in placements when compared with June, but a decline of nearly 15 per cent in comparison with July, 1934. The only loss of importance in placements from July of last year was in construction and maintenance, due to the curtailment of relief work. Gains were reported in logging, farming, mining and services, and nominal changes only in all other divisions. Placements by industrial divisions included: logging, 143; farming, 207; mining, 75; construction and maintenance, 2,605; and services, 628, of which 348 were of household workers. During the month 2,173 men and 247 women were placed in regular employment.

#### Movement of Labour

During the month of July, 1935, the offices of the Employment Service of Canada made 20,907 placements in regular employment, 11,565 of which were of persons for whom the employment located was outside the immediate district of the offices at which they were registered. Of the latter, 617 were granted

\*77 Placements effected by offices since closed.

the Employment Service reduced transportation rate, 590 going to situations within the same province as the despatching office and 27 to other provinces. The reduced transportation rate, which is 2·7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may wish to journey to distant employment for which no workers are available locally.

Transfers at the reduced rate from Ontario centres during July numbered 386, all of which were to provincial points. Securing certificates at Port Arthur 193 bush workers, 42 highway construction workers, 23 mine workers, 3 cafe employees, one carpenter and one hotel cook were conveyed to employment within the same zone, while from Fort William 98 bushworkers, 3 sawmill workers and 2 hotel employees, and from Ottawa one cook were despatched to points within their respective zones. Destined to the Timmins zone were one hoist runner, travelling from North Bay and one cafe cook from Toronto. The balance of this provincial movement was from Sudbury, from which centre 3 bush workers and one miner were transported to Port Arthur and 12 bushmen and one restaurant waitress within the Sudbury zone. In Manitoba during July 72 persons benefited by the Employment Service reduced transportation rate, 45 going to provincial centres and 27 to points outside. Within the province the transfers were all of agricultural help, the Winnipeg office despatching 41 farm hands and 4 farm household workers to employment within its own zone. Persons despatched to other provinces were also granted their certificates at the Winnipeg office, the Port Arthur zone receiving 11 bushmen, 4 farm hands, 2 cooks, one miner and one blacksmith and

Saskatchewan rural districts 8 farm hands. Taking advantage of the reduced rate in Saskatchewan during July 13 workers travelled to provincial employment. From Regina 9 teachers went to situations within the same zone and one farm hand to Yorkton, while the Saskatoon office was responsible for the despatch of one farm hand to North Battleford and of one teacher and one farm hand within its own zone. Offices in Alberta granted 130 reduced rate certificates during July, all provincial. Of these 124, were issued at Edmonton to 66 highway construction workers, 18 bushmen, 18 mine workers, 8 farm hands, one farm domestic, 3 sawmill workers, 2 steamship employees, 2 labourers, one hotel cook, one clerk and one carpenter going to various sections of the Edmonton zone, one farm hand to Calgary, and 2 farm hands to Drumheller. From Calgary 3 farm hands and one hotel kitchen worker were shipped within the same zone and one farm hand and one farm housekeeper to Drumheller. The labour movement in British Columbia during July was entirely provincial and comprised the transfer of 16 persons. Securing certificates at Vancouver 5 mine workers went to Penticton, 2 miners to Nelson and 4 mine workers, 2 hotel cooks and one farm hand within the Vancouver zone. In addition, the Prince Rupert office assisted in the despatch of one miner and one domestic to employment within its own zone.

Of the 617 workers who travelled at the Employment Service reduced transportation rate during July, 312 were conveyed by the Canadian National Railways, 292 by the Canadian Pacific Railway, 8 by the Northern Alberta Railway and 5 by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada for July, 1935

The value of the building represented by the permits taken out in 61 cities during July stood at \$4,266,224, a seasonal decline of \$850,842 or 16·6 per cent as compared with the June, 1935, total of \$5,117,066, but an increase of \$1,008,754 or 31·0 per cent in the more significant comparison with the July, 1934, aggregate of \$3,257,470.

The value of the building authorized in each month of the present year has been higher than in the same month of 1934, while since January, the aggregate for each month has also exceeded that for the corresponding month in 1933. The cumulative total for the first seven months of 1935 is higher than in any of the last three years. Although the improvement is partly due to the granting of

construction permits for public buildings in several centres as an unemployment relief measure, the movement in general building operations has also been distinctly more favourable than in the last few years. In comparison with earlier years of the record, from 1920 to 1931, however, the value of building authorizations continues low. The index number of wholesale prices of building materials during the elapsed months of 1935, at 81·8 per cent of the 1926 basic average, was lower than in the same period of any preceding year for which building statistics for the 61 cities are on record, with the exception of 1932 and 1933.

Some 50 cities furnished detailed statistics, showing that they had issued over 300 per-

mits for dwellings valued at nearly \$1,090,000, and some 1,900 permits for other buildings estimated at almost \$3,100,000. In addition, engineering projects valued at \$27,530 were undertaken by Brantford. In June, authority was given for the erection of some 300 dwellings and 1,900 other buildings, estimated to cost approximately \$1,241,000 and \$3,700,000, respectively, while an engineering project valued at \$23,000 was also listed.

An increase over June, 1935, was reported in British Columbia, where the authorizations were valued at \$1,504,823, or 156.8 per cent more than in the preceding month. The remaining provinces recorded declines, of which that of 54.0 per cent in Quebec was greatest.

In comparison with the same month in 1934, Prince Edward Island, Quebec, Ontario, Manitoba, Alberta and British Columbia showed increases, that of \$1,367,008 in British Columbia being most pronounced. The value of the building authorized in Nova Scotia, New Brunswick and Saskatchewan was lower than in July of last year.

Three of the four largest cities—Montreal, Toronto and Winnipeg—reported decreases as compared with June, 1935, but increases over July, 1934, while in Vancouver, there was an increase in both comparisons. Of the other centres, Charlottetown, Quebec, Belleville, Hamilton, Kingston, Kitchener, Niagara Falls, Stratford, St. Catharines, St. Thomas, Sault Ste. Marie, East Windsor, Riverside, Walkerville, Brandon, St. Boniface, Saskatoon, Lethbridge, Medicine Hat, Nanaimo, New Westminster, Prince Rupert, North Vancouver and Victoria showed gains as compared with June, 1935, and also with July, 1934.

*Cumulative Record for First Seven Months, 1920-1935*—The following table gives the value of the building authorized by 61 cities during July, and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the January-July total in 1926 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given, (1926 average=100).

Year	Value of permits issued in July	Value of permits issued in first seven months	Indexes of value of permits issued in first seven months (1926=100)	Average indexes of wholesale prices of building materials in first seven months (1926 average=100)
	\$	\$		
1935.....	4,266,224	28,895,295	29.7	81.8
1934.....	3,257,470	13,668,847	14.0	82.8
1933.....	2,180,403	12,496,302	12.7	76.5
1932.....	4,412,169	28,753,213	29.5	78.1
1931.....	11,042,609	69,993,717	71.8	83.3
1930.....	15,824,781	101,238,766	103.9	94.2
1929.....	22,702,584	147,311,851	151.2	99.2
1928.....	25,761,956	127,798,943	131.2	96.2
1927.....	16,369,195	97,211,914	99.8	56.1
1926.....	18,683,415	97,443,834	100.0	100.8
1925.....	12,812,603	78,712,320	80.8	103.1
1924.....	11,681,196	72,355,350	74.3	109.8
1923.....	13,078,547	86,126,043	88.4	111.7
1922.....	15,740,810	87,022,484	89.3	108.3
1921.....	10,965,891	66,737,575	68.5	130.2
1920.....	13,743,045	75,497,755	77.5	144.2

The aggregate for the first seven months of this year was very substantially higher than in 1934 or 1933, and also slightly exceeded the 1932 total; the increase over the same months of last year was 111.4 p.c. The average index number of wholesale prices of building materials was rather lower than in 1934; while it was higher than in 1933 or 1932, it was lower than in any of the preceding twelve years.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, August, 1935, summarized the employment situation as follows:—

There was a further improvement in employment between June 24 and July 22. The estimated number of insured persons in employment increased by 20,000.

The industries in which the most marked improvement occurred were the engineering, iron and steel and motor vehicle industries, electric cable and apparatus manufacture, the woollen and worsted and hosiery industries, the transport and distributive trades, most of the food and drink industries, and hotel and boarding house service. There was also a reduction in the numbers unemployed in

the coal mining industry. On the other hand, employment declined in most of the clothing trades, in cotton spinning, in the linen industry, and in building and public works contracting. Owing to local holidays, there was a sharp increase in the numbers registered as temporarily stopped in the jute industry.

Among those workpeople, of ages 16-64, who were insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at July 22, 1935 (including those temporarily stopped as well as those wholly unemployed), was 15.4, as compared with 15.5 at June 24, 1935, and with 16.7 at July 23, 1934. The percentage wholly unemployed at July 22, 1935, was 12.3, as compared with 12.6 at June 24, 1935;

while the percentage temporarily stopped was 3.1, as compared with 2.9. For males alone the percentage at July 22, 1935, was 17.6 and for females, 9.5; the corresponding percentages at June 24, 1935, were 17.8 and 9.2.

The estimated number of insured persons, aged 16-64, in employment in Great Britain at July 22 was 10,381,000. This was 20,000 more than a month before, and 234,000 more than a year before.

At July 22, 1935, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,501,226 wholly unemployed, 393,198 temporarily stopped, and 78,517 normally in casual employment, making a total of 1,972,941. This was 27,169 less than a month before, and 153,319 less than a year before. The total included 1,584,554 men, 58,034 boys, 281,712 women, and 48,641 girls.

The persons on the Registers included 903,966 persons with claims for insurance benefit; 729,002 insured persons with applications for unemployment allowances; 215,680 insured persons (including 18,191 insured juveniles under 16 years of age), not in receipt of insurance benefit or unemployment allowances, and 124,293 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at July 22, 1935, was 2,045,383.

### United States

*Manufacturing Industries.*—Factory employment decreased one-tenth of one per cent from June to July and pay rolls declined 1.7 per cent. The July, 1935, preliminary index of factory employment is 79.5, and the index of factory pay rolls is 65.3.

Employment in July, 1935, was one per cent above the level of July, 1934, and pay rolls were 7.9 per cent above the corresponding month of last year.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In July, 1935, reports were received from 22,074 establishments employing 3,545,832 workers whose weekly earnings were \$71,228,607. The employment reports received from these co-operating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country and more than 60 per cent of the wage earners in the 90 industries studied.

*Non-Manufacturing Industries.*—Ten of the 17 non-manufacturing industries surveyed monthly by the Bureau of Labor Statistics

showed gains in employment and pay rolls from June to July. The gains in employment ranged from 2.6 per cent in laundries to 0.1 per cent in the wholesale trade and telephone and telegraph industries. Employment and pay rolls in the anthracite and bituminous coal mining industries showed sharp declines from June to July and seasonal recessions were reported in many lines of retail trade. The decreases in employment in the remaining four industries ranged from 2.2 per cent in dyeing and cleaning to 0.4 per cent in electric railways and motor bus operation.

*Wholesale and Retail Trade.*—A slight gain in employment in July was shown in wholesale trade. Based on reports received from 14,511 establishments, employment increased 0.1 per cent over the month interval. Among the several lines of wholesale trade in which gains were noted were groceries, food products, farm supplies, hardware, leather, lumber and machinery. Wholesale dry goods and apparel establishments reported a small decline in number of workers. Bulk tank stations and manufacturers' sales branches were also among the lines of wholesale trade reporting fewer employees in July than in the preceding month.

Employment in retail trade establishments decreased 3.8 per cent over the month interval based on returns supplied by 44,607 establishments employing 692,088 workers in July. The decreases which were largely seasonal were most pronounced in the general merchandising and wearing apparel groups. Employment in the general merchandising group, which is composed of department, variety, general merchandising and mail order houses, declined 7.1 per cent, while the group of wearing apparel establishments showed a drop of 12.6 per cent over the month interval. Retail food stores reported 0.9 per cent fewer workers in July than in the preceding month. Small gains were shown in the automotive group and the "other retail" group. The latter group includes drug stores, retail ice, and several other unclassified lines of trade.

*Public Utilities.*—Two of the three public utility industries surveyed reported increases in employment in July, electric light and power and manufactured gas (1.1 per cent) and telephone and telegraph (0.1 per cent). Electric railway and affiliated motor bus companies reported a decline of 0.4 per cent in number of workers from June to July.

*Service Industries.*—Four of the 6 service industries surveyed reported gains in employment. Laundries reported a seasonal increase of 2.6 per cent, brokerage establishments showed a gain of 1.6 per cent, banks

0.9 per cent, and insurance 0.8 per cent. The declines in the remaining two industries were seasonal, dyeing and cleaning establishments reporting a drop of 2.2 per cent in number of workers and year-round hotels a decline of 1.2 per cent. Summer resort hotels, open only part of the year and not included in the above figure, showed a sharp seasonal increase in employment in July.

**MINING.**—Pronounced declines in employment and pay rolls were shown in the anthracite and bituminous coal mining industries in July. These declines were due primarily to sharply curtailed production in July and reflected the reaction from heavy buying for storage in the preceding month. Employment in anthracite mines decreased 13 per cent over the month interval and bituminous coal mines reported 10.2 per cent fewer employees. Pay rolls decreased to an even greater extent, weekly wage disbursements in anthracite mining being 43.1 per cent less in July than in June and in bituminous coal mining 45 per cent less than in the

preceding month. A decrease of 1.8 per cent in employment was shown in metalliferous mining. In the quarrying and non-metallic mining industry and the crude petroleum industry gains in employment of 0.9 per cent and 0.6 per cent, respectively, were reported.

**BUILDING CONSTRUCTION.**—A further expansion in employment and payrolls in the private building construction industry was shown in July. Based on reports received from 9,703 contractors reporting to the Bureau of Labour Statistics, there was an increase of 1.7 per cent in number of workers from June to July and of 3 per cent in payrolls. The figures relate to employees engaged on erection, altering and repairing of buildings, exclusive of projects financed by the Public Works Administration or Reconstruction Finance Corporation funds, regular appropriations of Federal, State, and local governments, or loans insured by the Federal Housing Administration.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the *LABOUR GAZETTE* for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the

amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wage Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wage scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924 provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district, or fair and reasonable hours. These "A" conditions, in so far as wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the *LABOUR GAZETTE*

of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the work-people employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper

books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have recently been executed by the Government of Canada:

## DEPARTMENT OF MARINE

*Contract in Group "A" (Construction, Remodelling, etc.)*

Construction of a new Meteorological Observatory at Quebec, P.Q. Name of contractor, Mr. Amedee Latulippe, Quebec, P.Q. Date of contract, July 29, 1935. Amount of contract, \$23,790. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Labourers.....	\$0 35	8
Bricklayers.....	0 70	8
Stonecutters.....	0 60	8
Concrete mixer operator.....	0 45	8
Carpenters.....	0 50	8
Electric workers.....	0 55	8
Painters.....	0 50	8
Plasterers.....	0 70	8
Plumbers.....	0 55	8
Metal workers (roofers).....	0 55	8

## DEPARTMENT OF NATIONAL DEFENCE

*Contracts in Group "A" (Construction, Remodelling, etc.)*

Contract for the erection of married officers' quarters at the Permanent Force Barracks, Calgary, Alberta. Name of contractors, Messrs. Nornstrom Brothers, Calgary, Alberta. Date of contract, August 15, 1935. Amount of contract, \$23,490. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Asbestos insulation workers.....	\$0 80	8
Blacksmiths.....	0 70	8
Fireman—stationary.....	0 50	8
Machinists.....	0 70	8
Structural steel workers.....	0 80	8
Steam shovel engineers.....	1 00	8
Steam shovel cranimen.....	0 90	8
Steam shovel firemen.....	0 50	8
Hoist operators—one drum.....	0 65	8
Hoist operators—two drum.....	0 80	8
Cement mixer operator—gas, elec.....	0 50	8
Cement mixer operator—steam.....	0 60	8
Compressor operator.....	0 60	8
Bucket loader.....	0 60	8
Excavator, bear cat and gas shovels	0 75	8
Shinglers.....	0 75	8
Cement finishers.....	0 60	8
Stone masons.....	0 90	8
Stone cutters.....	1 00	8
Brick and hollow tile layers.....	0 90	8
Structural steel erectors.....	0 80	8
Carpenters and joiners.....	0 75	8
Sheet metal workers.....	0 80	8
Sheet metal workers' helpers.....	0 50	8
Roofers, felt and gravel.....	0 50	8
Terrazzo layers.....	0 75	8
Marble setters.....	0 95	8
Tile setters.....	0 90	8
Metal lathers.....	yard 0 06	8

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Plasterers.....	0 90	8
Plasterers' helpers.....	0 50	8
Plumbers and steamfitters.....	0 90	8
Plumbers' and steamfitters' helpers	0 50	8
Electricians.....	0 90	8
Linoleum layers, waxers, polishers.	0 60	8
Labourers.....	0 45	8
Motor truck driver.....	0 50	8
Teamster, team and wagon.....	0 75	8
Teamster.....	0 45	8
Painters and glaziers.....	0 75	8
Reinforcing steel rod man.....	0 50	8

Note.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

The supply and erection of structural steel for an Aircraft Hangar at Megantic, P.Q. Name of contractors, MacKinnon Steel Corporation Limited, Sherbrooke, P.Q. Date of contract, August 7, 1935. Amount of contract, \$5,730. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoist operators—gas, or elec.....	\$0 50	8
Hoist operators—steam.....	0 55	8
Structural steel workers.....	0 65	8
Labourers.....	0 35	8
Truck drivers.....	0 40	8
Teamster, team and wagon.....	0 60	8
Teamsters.....	0 35	8
Painters.....	0 50	8

*Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of June, 1935, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Safety razors and blades.....	Gillette Safety Razor Co. Ltd., Montreal, P.Q.
Shaving brushes.....	T. S. Simms Co., Ltd., Saint John, N.B.
Waterproof coats.....	Shiff & Co., Montreal, P.Q.
Enamelware.....	General Steel Wares Ltd., Montreal, P.Q.
Metal doors.....	Metallic Roofing Co. of Canada, Toronto, Ont.
Kitchenware.....	General Steel Wares Ltd., Montreal, P.Q.
Socks.....	George E. Hanson, Hull, P.Q.
Drill jackets and trousers.....	Grant-Holden-Graham, Ltd., Ottawa, Ont.
Mattresses.....	Simmons Ltd., Montreal, P.Q.
Oil skin clothing.....	Seythes Co., Ltd., Montreal, P.Q.

Goods contracted for	Contractor
Oil skin clothing.....	Tower Canadian Ltd., Toronto Ont.
Gloves.....	Glovers Guild Ltd., Ste. Anne de la Parade, P.Q.
Enamelware.....	General Steel Wares Ltd., Montreal, P.Q.
Light weight shirts.....	Schofield Woollen Co., Ltd., Oshawa, Ont.
Light weight shirts.....	Joseph Simpson & Sons, Ltd., Toronto, Ont.
Sweater jackets.....	Regent Knitting Mills, Ltd., Montreal, P.Q.
Sweater jackets.....	Mercury Mills Ltd., Hamilton, Ont.
G. S. sheets.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Shirt drill.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Trouser drill.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Metal door frames.....	Geo. W. Reed Co., Ltd., Montreal, P.Q.
Transmitters.....	Canadian Marconi Co., Montreal, P.Q.
Flatware.....	McGlashan Clarke Co., Ltd., Niagara Falls, Ont.
Warm greatcoats.....	Workman Uniform Co., Montreal, P.Q.
Canvas shoes.....	Great West Felt Co., Ltd., Elmira, Ont.
Drab serge.....	Paton Mfg. Co., Ltd., Montreal, P.Q.
Horse rugs.....	Hugh Carson Co., Ltd., Ottawa, Ont.
Blue serge jackets.....	Workman Uniform Co., Ltd., Montreal, P.Q.
Cloth.....	Oxford Woollen Mills Ltd., Oxford, N.S.
Breeches.....	Woods Manufacturing Co., Ottawa, Ont.
Gabardine.....	Paton Manufacturing Co., Ltd., Montreal, P.Q.
Whipcord.....	Paton Manufacturing Co., Ltd., Montreal, P.Q.
Braces.....	Russell Manufacturing Co., St. Johns, P.Q.
Tap soles.....	Beardmore Leathers Ltd., Toronto, Ont.

## POST OFFICE DEPARTMENT

*Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Post Office Department during the month of August, 1935, for various classes of manufactured supplies, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Metal dating stamps and type, brass crown seals, cancellers, etc.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Rubber stamps (and repairs).....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Letter carriers' uniforms.....	Needlecraft Mills Ltd., St. Hyacinthe, P.Q.
Letter carriers' uniforms.....	Tayside Textiles Ltd., Perth, Ont.
Letter carriers' uniforms.....	Oxford Woollen Mills Ltd., Oxford, N.S.
Mail bag fittings.....	F. W. Carling, Ottawa, Ont.
Mail bag fittings.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Stamping machines, etc.....	Machine Works Ltd., Montreal, P.Q.

## DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, Remodelling, etc.)*

Construction of a float and approach renewal at Bliss Landing, B.C. Name of contractors, Pacific Engineers, Vancouver, B.C. Date of contract, August 26, 1935. Amount of contract, approximately \$4,288.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Boorman.....	0 90	8
Bridgeman.....	0 90	8
Fireman.....	0 65	8
Labourer.....	0 40	8

N.B.—In any case where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this contract

Paving of wharves and approaches, Midland, Ont. Name of contractors, Brennan Paving Co., Ltd., Hamilton, Ont. Date of contract, August 14, 1935. Amount of contract, \$16,424.25. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Labourers.....	\$0 35	8
Rakers.....	0 40	8
Road roller engineer—steam.....	0 65	8
Road roller engineer—gas.....	0 50	8
Motor truck driver.....	0 40	8

Construction of alterations and additions to the public building at Trenton, Ont. Name of contractor, Mr. Hubert Strong, Trenton, Ont. Date of contract, July 23, 1935. Amount of contract, \$34,266 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 45	8
Cement finishers.....	0 55	8
Stonemasons.....	0 80	8
Stonecutters.....	0 70	8
Brick and hollow tile layers.....	0 80	8
Structural steel workers.....	0 80	8
Ornamental iron workers.....	0 55	8
Hollow metal workers.....	0 65	8
Kalamein iron workers.....	0 65	8
Carpenters and joiners.....	0 60	8
Sheet metal workers.....	0 65	8
Roofers, felt and gravel.....	0 40	8
Terrazzo layers.....	0 70	8
Marble and tile setters.....	0 80	8
Metal lathers.....	0 55	8
Plasterers.....	0 80	8
Plasterers' helpers.....	0 40	8
Painters and glaziers.....	0 55	8
Plumbers and steamfitters.....	0 65	8
Electricians.....	0 65	8
Labourers.....	0 35	8
Teamster, team and wagon.....	0 65	8
Teamster.....	0 35	8
Motor truck driver.....	0 40	8

N.B.—Where, by agreement or current practice, the working hours of any class of labour are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of an extension to the King's Wharf, Quebec, P.Q. Name of contractors, Messrs. Victor E. A. Belanger and James Bertrand, both of L'Orignal, Ontario. Date of contract, August 20, 1935. Amount of contract, approximately \$101,725. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths.....	\$0 45	8
Compressor operators.....	0 40	8
Drill runners.....	0 40	8
Driver, horse and cart.....	0 50	8
Teamster, team and wagon.....	0 70	8
Teamster.....	0 35	8
Motor truck drivers.....	0 40	8
Labourers.....	0 35	8
Firemen—stationary.....	0 40	8
Hoist operators—steam.....	0 60	8
Pile driver runners.....	0 60	8
Powdermen.....	0 40	8
Timbermen or cribmen (using interchangeable such tools as: broad-axe, hammer, X-cut saw, auger, adze).....	0 40	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a dam at Cowan Lake, Sask. Name of contractor, Mr. William C. Wells, Wilkie, Sask. Date of contract, July 26, 1935. Amount of contract, approximately

\$12,736.78. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners.....	\$0 70	8
Blacksmiths.....	0 55	8
Blacksmiths' helpers.....	0 40	8
Teamster, team and wagon.....	0 65	8
Teamster.....	0 35	8
Engineer for piledriver.....	0 65	8
Steam winch engineers.....	0 60	8
Fireman—Stationary.....	0 40	8
Timbermen or cribmen (using interchangeable such tools as broad-axe, X-cut saw, hammer, auger and adze).....	0 42	8
Labourers.....	0 35	8
Pile driver man.....	0 50	8
Motor truck driver.....	0 40	8

Construction of repairs to Lighthouse Wharf at Thames River Mouth, Ontario. Name of contractors, The Chatham Dredging and General Contracting Co., Ltd., Chatham, Ont. Date of contract, July 26, 1935. Amount of contract, approximately \$11,625.45. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoist engineer—Steam.....	\$0 65	8
Hoist Engineer—Gasoline.....	0 50	8
Stationary firemen.....	0 40	8
Concrete mixer operator.....	0 45	8
Cement finisher.....	0 55	8
Carpenter.....	0 60	8
Blacksmith.....	0 55	8
Teamster, team and wagon.....	0 65	8
Teamster.....	0 35	8
Motor truck driver.....	0 40	8
Labourers.....	0 35	8
Timbermen or cribmen (using interchangeable such tools as: Broad-axe, hammer, adze, auger, X-cut saw).....	0 42	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a wharf at Newcastle, N.B. Name of contractors, Messrs. Burton F. Somers and John T. Kingston, both of Newcastle, N.B. Date of contract, August 21, 1935. Amount of contract, approximately \$24,699. A fair wages schedule was inserted in the contract as follows:—

Construction of a wharf at Little Shippigan, Gloucester Co., N.B. Name of contractors, Messrs. J. E. & D. P. Connolly, Bathurst, N.B. Date of contract August 14, 1935. Amount of contract, approximately \$22,662.65.

A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters.....	\$0 50	8
Timbermen.....	0 37½	8
Blacksmiths.....	0 45	8
Labourers.....	0 30	8
Driver, team and wagon.....	0 55	8
Driver, horse and cart.....	0 45	8
Driver.....	0 30	8

Repairs to West and East Breakwaters at Port Colborne, Ontario. Name of contractors, Messrs. Hill & Sibbald, Ltd., St. Catharines, Ont. Date of contract, August 5, 1935. Amount of contract, approximately \$16,840.12. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoist engineer—Steam.....	\$0 65	8
Hoist engineer—Gasoline.....	0 60	8
Stationary fireman.....	0 40	8
Concrete mixer operator.....	0 45	8
Cement finisher.....	0 55	8
Carpenter.....	0 60	8
Timbermen or Cribmen (using interchangeable such tools as broad-axe, X-cut saw, hammer, auger, adze).....	0 42	8
Blacksmith.....	0 55	8
Teamster, team and wagon.....	0 65	8
Teamster.....	0 35	8
Motor truck driver.....	0 40	8
Labourers.....	0 35	8

Construction of Bank Protection at Lulu Island, Fraser River, B.C. Name of contractors, Fraser River Pile Driving Co., Ltd., New Westminster, B.C. Date of contract, August 15, 1935. Amount of contract, approximately \$16,750. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Piledriver foreman.....	\$1 12½	8
" engineer.....	1 00	8
" man.....	0 90	8
" boom man.....	0 90	8
Derrick scow engineer.....	1 00	8
Fireman.....	0 65	8
Bridgeman.....	0 90	8
Boom man.....	0 50	8
Powderman.....	0 50	8
Driller.....	0 45	8
Labourers.....	0 45	8

Construction of a public building at New Waterford, N.S. Name of contractors, Messrs. Fraser, Mason & Fraser, New Glasgow, N.S. Date of contract, July 30, 1935. Amount of contract, \$31,335 and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 45	8
Cement finishers.....	0 60	8
Stonemasons.....	0 80	8
Stone cutters—Granite, sandstone and limestone.....	0 70	8
Brick and hollow tile layers.....	0 80	8
Structural steel workers.....	0 65	8
Ornamental iron workers.....	0 55	8
Hollow metal workers.....	0 55	8
Carpenters and joiners.....	0 60	8
Sheet metal workers.....	0 70	8
Roofers, felt and gravel.....	0 40	8
Terrazzo layers.....	0 70	8

**New Labour Organizations**

The following organizations have been recently chartered by the Trades and Labour Congress of Canada:

Three Rivers' Trades and Labour Council.—President, Philippe Lacroix, 301 Notre Dame St., Cap Madeleine, Que. Secretary, R. D. Labrie, 17 Notre Dame St., Cap Madeleine, Que.

Truckers' Federal Labour Union, No. 81.—President, H. Davidson, Fort William, Ont. Secretary-treasurer, G. W. Burney, 639 S. Norah St., Fort William, Ont.

Lumber Workers' Federal Union, No. 78.—President, E. V. Schaurehorn, Crooked River, Sask. Secretary-treasurer, O. Newmann, Crooked River, Sask.

The rural dweller in the United States, has, on an average, four or five years longer life than the urban resident, according to life tables just completed by the Statistical Bureau of the Metropolitan Life Insurance Company, relating to the white population of the United States in 1930, classified according to residence in urban or rural sections. At birth, a white male has an expectation of life of 56.73 years if an urban resident, and of 62.09 years if dwelling in a rural section. The

corresponding figures for a white female are 61.05 and 65.09 years.

The South Africa Workmen's Compensation Act No. 59 of 1934 came into force on July 1, 1935. The scale of benefits under the new Act constitute a material increase over those of the 1914 Act. In place of the one payment system of compensation, the new Act provides that a workman whose percentage of permanent total disablement exceeds 70 per cent now receives a pension for life, which may go as high as £13 6s. 8d. per month. If a workman is killed as a result of an accident during employment, there is provision for his widow and dependents, even if the accident was caused through his own wilful misconduct. Special provisions are made for compensation to natives. The employer must make provision for medical attention and first aid in case of accident, and for the display, in a conspicuous place, of a printed summary of the procedure laid down for the recovery of compensation. Payment by the workman of anything towards the cost of insurance is prohibited. The Act makes provision for every recognized form of industrial disease except miner's phthisis. Details of this Act were given in the LABOUR GAZETTE for September, 1934, page 836.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

REGINA, SASKATCHEWAN.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS UNION, LOCAL No. 75.

Agreement to be in effect from May 1, 1935 to April 30, 1936.

The agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, December, 1934, page 1149 and October, 1933, page 1034.

Minimum wages per week: journeymen cylinder pressman \$34.65, cylinder assistant \$25.29, cylinder assistant working part time on cylinder and platens \$20.43, platen pressman \$32.29.

REGINA, SASKATCHEWAN.—CERTAIN NEWSPAPER AND JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL 657.

Agreement to be in effect from May 1, 1935 to April 30, 1937.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, June, 1934, page 565 and June, 1933, page 649.

Wages and hours remain as follows: in newspaper offices 78 cents per hour with a 48 hour week for day work, and \$3 per week extra with a 45 hour week for night work; in job printing offices 78 cents per hour with a 44 hour week for day work, and \$3 per week extra with a 42 hour week for night work.

### Construction: Buildings and Structures

TORONTO, ONTARIO.—MARBLE CONTRACTORS SECTION OF THE TORONTO BUILDING AND CONSTRUCTION ASSOCIATION AND THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION, LOCAL No. 31 (MARBLE SETTERS).

Agreement reached following strike reported on page 820 of this issue. Agreement to be in effect from August 21, 1935, to March 1, 1936 and thereafter from year to year until notice.

The agreement covers the city of Toronto and a district within approximately ten miles of its limits.

Only union members to be employed on all marble manufactured to be erected by the employers, and the union to give preference in supplying men to employers of the Association. All marble taken down and replaced on the same job to be done by union members.

Hours: a maximum of 8 per day, 40 per week with no work on Saturdays. It is, however, agreed that a 6 hour day be worked until such time as it is shown that 50 per cent of the members of the local are working. Where three shifts are worked and the overtime shifts equal at least  $66\frac{2}{3}$  per cent of the regular shift, 8 hours pay for 7 hours work. Where work cannot be done during the day, it may be done at straight time for night work of not more than eight hours.

Overtime: time and one half for first two hours over regular time, thereafter double time. Work on Sundays and eight specified holidays, double time.

Wages for marble setters: \$1.10 per hour.

The apprenticeship system as adopted by the international agreement is to be operative.

Men sent to work outside the area covered by the agreement to have transportation paid by employer, and travelling time up to 8 hours per day if travelling by day (Saturday and Sunday excluded), or a berth provided if travelling by night. While working on out of town work, men to have their board paid by the employer.

A joint arbitration board to be formed for the settlement of any disputes and for the drawing up of a new agreement if the two parties cannot agree. No strike to occur before a dispute has been referred to this board.

**WINDSOR, ONTARIO.—ELECTRICAL CONTRACTORS ASSOCIATION OF ESSEX COUNTY AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 773.**

The agreement is to be in effect from June 1, 1935 to May 30, 1936, unless previously cancelled by either party.

All journeymen and apprentices required to be secured from the union and the union to give preference in supplying men to employers who are parties to this agreement.

Hours: 8 per day, 40 per week. No work on Saturdays except in cases of emergency when work on Saturday morning may be done at straight time, but journeymen so employed must take a half day off, so work will not exceed 40 hours per week.

Overtime and work on Saturdays (except as noted above), Sundays and five specified holidays, double time.

Wages for journeymen electrical workers: \$1 per hour. A foreman must be employed on any job employing four or more journeymen, foreman to be paid 20 per cent above journeyman's rate.

Apprentices to be indentured under the Ontario Apprenticeship Act, with wages to be agreed upon between the parties to this agreement. Not more than one apprentice to each three journeymen in any shop or job.

No restrictions in the use of machinery or tools.

**Transportation and Public Utilities: Local Transportation**

**TORONTO, ONTARIO.—A CERTAIN DAIRY COMPANY AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 647 (MILK DRIVERS AND DAIRY EMPLOYEES)**

Agreement reached following strike reported on page 822 of this issue. Agreement to be in effect from August 15, 1935 to January 15, 1936. Upon 30 days notice from either party the agreement may be brought up for reconsideration.

The agreement applies to all employees of the Company except superintendents and office workers. Only union members or those willing to join the union to be employed. Employees through their accredited representatives to have the right to discuss any grievances with the management.

Six days per week only may be worked except in case of emergency.

Wage rates to be continued unchanged for the duration of the agreement. (The rates are not given in the agreement but are reported to be \$18 per week plus 3 per cent com-

mission on collections for drivers, and from \$18 to \$40 per week for inside employees.)

One week's notice of dismissal or of leaving position to be given.

After one year's service, employees to be given one week's vacation annually with pay.

**Quebec Collective Agreements Extension Act**

The following agreements in the Province of Quebec have recently been made obligatory by Orders in Council and the terms so made obligatory are summarized in the article beginning on page 867 of this issue:

PRINTERS, CHICOUTIMI

TINSMITHS AND ROOFERS, QUEBEC

BUILDING TRADES, QUEBEC

ORNAMENTAL IRON AND BRONZE WORKERS, MONTREAL

BUILDING TRADES, MONTREAL (AMENDMENT)

**Industrial Standards Act of Alberta**

The following schedule has been made binding by Order in Council and the terms summarized in this issue page 869:

PLUMBERS, EDMONTON

By an Order in Council appearing in the August 15 issue of the *Alberta Gazette*, it is announced that the Industrial Standards Act (LABOUR GAZETTE, June, 1935, page 534) is to be administered by the provincial secretary.

"First Aid at Mines" is the title of a pamphlet recently published by the Mines Department, Great Britain, for the purpose of helping mine managements and mine workers in some of the details of a good first aid and ambulance service. Emphasizing the importance of such a service the report referred to an annual toll of mining accidents, as follows:

"For the whole country the fatal injuries number over 800 a year: the cases of injury which disable the worker for more than three days number about 125,000. These are grave figures and their importance must not be minimized, but the number of minor injuries requiring First Aid treatment is far greater. Under the best organized First Aid systems at collieries to-day, the number of cases of minor injury treated in a year is more than the total number of persons employed. These are cases given treatment for the first time. It has been shown that, at a mine employing 1,000 men, there are on an average one fatal injury in the course of a year, about 150 injuries disabling for more than three days, and at least 1,000 minor injuries which ought to receive First Aid treatment either in the First Aid Room on the surface or underground.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

**R**ECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the same industry or business and the same district, by Orders in Council, of four agreements which are summarized below and amendments to another Order in Council which are also noted below. Notices of application for changes in agreements already in effect under Orders in Council have appeared in the *Quebec Official Gazette*, as follows: barbers at Joliette in the issue of August 3; stonecutters (other than granite) throughout the Province, bakers at Montreal and building trades at Hull in the issue of August 10; bakers at Hull, barbers at Three Rivers, barbers at St. Hyacinthe and bakers at Three Rivers in the issue of August 24; men's, boys', girls', and children's clothing throughout the Province in the issue of August 31. Notices of application for the extension of agreements to all employees and employers in the same trade, industry or business and in the same district have appeared in the *Quebec Official Gazette*, as follows: cloakmakers throughout the Province in the issue of August 10; barbers at Portneuf and barbers at St. Jerome in the issue of August 17; printers at Quebec and building trades at Chicoutimi in the issue of August 24; barbers at Rouyn and Noranda in the issue of August 31.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these con-

ditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**PRINTERS, CHICOUTIMI.**—An Order in Council, approved August 15 and published in the *Quebec Official Gazette*, August 24, makes obligatory the terms of an agreement (as amended following objections) between certain newspaper and job printing firms of Chicoutimi, Jonquière and La Malbaie and Le Syndicat Catholique et National des Imprimeurs de Chicoutimi (the National Catholic Union of Printers of Chicoutimi).

The territorial jurisdiction comprises the judicial districts of Chicoutimi, Lake Saint John, Roberval and Charlevoix-Saguenay.

The agreement to be in effect from August 24, 1935, to August 23, 1936, and to be renewed automatically unless one of the parties gives notice one month before expiration date of a desire to amend or repeal the agreement.

Hours: 8 per day, 40 per week, to be worked between 7 a.m. and 6 p.m.; no work on Saturdays. Eight days are named as holidays.

Overtime: any work done outside the above hours to be considered overtime and be paid straight time for the first eight hours of overtime over forty hours per week and time and one half for all additional overtime.

Minimum wages for journeymen typographers, pressmen, bookbinders and stereotypers: 52 cents per hour; except that in municipalities of less than 2,000 population, wage rates may be 10 per cent less.

One apprentice allowed to the first journeyman typographer or pressman and one additional apprentice for every five journeymen. Apprentice typographers and pressmen to serve five years, male bookbinders four years and female bookbinders two years.

Minimum wages per week for apprentices: first year, \$4, second year, \$6, third year, \$9, fourth year, \$12, first half of fifth year, \$14,

second half of fifth year, \$16. As noted above for journeymen, wage rates in municipalities of less than 2,000 population may be reduced 10 per cent.

The joint committee supervising the application of this agreement to have the right to verify wage rates and hours in the establishments and to act for employees under the agreement without having to prove an assignment of claim by the interested party.

**TINSMITHS AND ROOFERS, QUEBEC.**—An Order in Council, approved August 21 and published in the *Quebec Official Gazette*, August 24, makes obligatory the terms of an agreement between certain tinsmithing and roofing contractors of Quebec and L'Union Nationale Catholique des Ferblantiers-Couvreurs de Québec, Incorporée (The National Catholic Union of Tinsmiths and Roofers of Quebec, Incorporated).

The territorial jurisdiction comprises the counties of Quebec, Levis, Montmorency, Portneuf, Beauce, Dorchester, Megantic and Charlevoix. The agreement does not apply to proprietors in the agricultural industry who derive their living therefrom.

Agreement to be in effect from August 24, 1935, to April 30, 1936, and for another year if no notice of intention to repeal it is given by either party. Building contracts signed before the adoption of the Order in Council approving the agreement are not subject to its terms.

Hours to conform to the provisions of the Order in Council under the limiting of working hours Act establishing the 40 hour week and 8 hour day. However in cases of non-application of that Order in Council or of derogation of it authorized by competent authority, hours to be 55 per week in summer with no work on Saturday afternoons except in case of necessity when it may be done at regular rates, and 48 hours per week in winter.

Overtime: time and one-half until midnight; thereafter double time. Work on Sundays and holidays only in case of necessity and then at double time.

Wages for journeymen tinsmiths and roofers: 45 cents per hour in the city of Quebec, Levis and within a radius of 10 miles of their limits, in all other municipalities of a population of 5,000 or over and for work on contracts of \$10,000 and over in any municipality; 40 cents for work on contracts of less than \$10,000 in municipalities of a population of less than 5,000 with the exception of municipalities within a radius of 10 miles of Quebec and Levis.

One apprentice may be employed for every three journeymen.

Wages for apprentices: 10 cents per hour during first year, 15 cents during second year, 20 cents during third year and 25 cents during fourth year.

For work outside of worker's place of residence, travelling and living expenses to be paid by the employer.

Journemen employed in the maintenance of public buildings or in an industrial or commercial establishment, if they are permanent employees and paid by the week or month may work 48 hours per week and must be paid a minimum of \$19 per week in the cities of Quebec and Levis and within a radius of 10 miles of their limits and \$16 in the rest of the territory covered by the agreement. If an em-

ployee boards or lodges in the establishment, the employer may deduct 20 cents per meal and \$3 per month per room from the wages of the employee.

**BUILDING TRADES, QUEBEC.**—An Order in Council approved August 26 and published in the *Quebec Official Gazette*, August 31, makes obligatory the terms of an agreement between certain contractors and Le Conseil des Métiers de la Construction de Québec (The Building Trades Council of Quebec) comprised of National Catholic Unions of building trades.

The territorial jurisdiction comprises the counties of Quebec, Levis, Montmorency, Portneuf, Beauce, Dorchester and Megantic and will also include Charlevoix county until the building trades agreement in the Lake Saint John district comes into force.

The agreement is in effect from August 31, 1935, to March 1, 1936, and shall be renewed automatically unless either party gives notice of repeal 30 days before the expiration date. Building contracts signed before the adoption of this Order in Council are not subject to it.

The agreement does not apply to proprietors in the agricultural industry who derive their living therefrom.

Hours to conform to the provisions of the Order in Council under the limiting of working hours Act establishing the 8 hour day and 40 hour week, but in case of non-application or derogation of that Order in Council, hours to be 9 per day from April 1 to September 30 and 8 per day from October 1 to March 31.

Overtime to be paid at time and one-half until midnight and double time after midnight. No work on Sundays and holidays except in case of necessity when it shall be paid for at the rate of double time.

Minimum hourly wage rates in the city of Quebec, Levis and within 10 miles of their limits: bricklayers, masons and plasterers 70 cents; carpenters and joiners, metal lathers and "stationary and mechanics enginemmen" 50 cents; wood lathers and drillers, 45 cents; common labourers and helpers, mortar makers, celanite mixers, plaster pourers, hod carriers, 40 cents; apprentice bricklayers, masons and plasterers, 25 cents during first 6 months, 30 cents during second six months, 45 cents during second year and 60 cents during third year; apprentice carpenters, 15 cents during first year, 20 cents during second year and 25 cents during third year.

In all municipalities, however, having a population of less than 5,000 for work on contracts "whereof the total cost, salaries and material included, is less than \$10,000," the following hourly rates are to be in effect: bricklayers, masons and plasterers, 55 cents; carpenters and joiners and "stationary and mechanics enginemmen," 40 cents; drillers and wood and metal lathers, 35 cents; common labourers and helpers, mortar makers, celanite mixers, plaster pourers and hod carriers, 25 cents; apprentice bricklayers, masons and plasterers, 20 cents during first six months, 25 cents during second six months, 40 cents during second year and 50 cents during third year; apprentice carpenters, 15 cents during first year, 20 cents during second year and 25 cents during third year.

One apprentice allowed to every ten journeymen in the plastering, bricklaying-masonry and carpentry trades.

Workmen engaged in the maintenance of public buildings or in an industrial or commercial establishment if they are permanent employees and paid by the month or by the week, to work 48 hours per week and to be paid the following minimum rates: in Quebec and Levis qualified workmen \$19 per week and \$13 for labourers; outside the cities of Quebec and Levis and of the municipalities of Bienville and Lauzon \$16 per week for qualified workmen and \$12 for labourers. Such employees lodging or boarding in the establishment may be charged \$3 per room per month and 20 cents per meal.

**ORNAMENTAL IRON AND BRONZE WORKERS, MONTREAL.**—An Order in Council, approved August 26 and published in the *Quebec Official Gazette*, August 31, makes obligatory the terms of an agreement between certain ornamental iron firms and L'Union Canadienne des Travailleurs en Fer et en Bronze Ornamental de Montréal (The Canadian Union of Ornamental Iron and Bronze Workers of Montreal).

The territorial jurisdiction comprises the Island of Montreal and l'Île Bizard and the counties of Assomption, Terrebonne, Laval, Two Mountains, Argenteuil, Vaudreuil, Soulanges, Beauharnois, Chateauguay, Laprairie, Chambly and Verchères.

The agreement applies only to shop workmen.

The agreement is in effect from August 31, 1935, to April 1, 1936.

Hours: 8 per day and 44 per week.

Overtime: time and one-half until midnight; thereafter double time. Work on Sundays and holidays, double time.

Wages per hour: mechanics, 55 cents, fitters, 45 cents, helpers, 35 cents. It is agreed that these rates are to be increased at least 5 cents per hour on April 1, 1936, which rates are to be

effective until March 31, 1937. Any increase over 5 cents to be based on the average increase of wages in the building trades as are effective for the year 1936 to 1937 by Order in Council.

**BUILDING TRADES, MONTREAL.**—An Order in Council, approved August 12 and published in the *Quebec Official Gazette*, August 17, was amended by a further Order in Council, approved August 26 and published in the *Quebec Official Gazette*, August 31, both amended the Order in Council covering building trades in Montreal (LABOUR GAZETTE, May, page 424, and changes noted in LABOUR GAZETTE, June, page 532) as follows:

Section 4A (LABOUR GAZETTE, May, page 425) of the Order in Council is amended so that in addition to the maintenance men provided for in the original Order in Council, there are now also included maintenance men employed in office or public buildings, apartment buildings or dwelling houses of any kind, who must be paid a minimum of \$22 per week for skilled workmen and \$16 for unskilled workmen (labourers) within the Island of Montreal, and \$18 for skilled workmen and \$14 for unskilled workmen (labourers) outside the Island of Montreal. A maintenance man is defined as any qualified workman or unqualified workman of the building trades who is employed throughout the year by the same employer. It is provided, however, that maintenance men employed in manufacturing establishments and in hotels are not governed by these provisions. The amendment also provides that maintenance men working over 48 hours per week must be paid for such overtime on the basis of the regular hourly rates for their trades. It is also stipulated that the provisions of the section relating to maintenance men are retroactive to July 15, 1935.

## INDUSTRIAL STANDARDS ACT OF ALBERTA

### First Schedule of Wages and Hours Recently Approved by Order in Council

**THE** Industrial Standards Act of Alberta, 1935, is similar to the Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, page 534, where are also noted the minor differences between the Ontario and Alberta Acts. The Act provides that the Minister of Labour for Alberta may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry and district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representa-

tion of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months, and thereupon such schedule shall be binding upon every employee and employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Alberta Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. A summary is given below of the first schedule which has thus been approved by Order in Council.

**PLUMBERS, EDMONTON.**—An Order in Council dated August 17 and published in *The Alberta Gazette*, August 31, makes obligatory a schedule of wages and hours of labour for all employees in the domestic plumbing and heating industry employed on plumbing or

steamfitting work including plumbing, steam and hot water heating, gas fitting, pipe work and pipe installation within a zone which includes the city of Edmonton and surrounding district.

Hours: 8 per day (from 8 a.m. to 5 p.m. with one hour for lunch); not more than 40 hours per week except in cases of emergency.

Overtime: time and one half until midnight; thereafter double time. If men required for jobbing work and emergency work on Saturday mornings, such work to be done at single time. For work on Saturdays between noon and 5 p.m., time and one half. Saturdays (not other-

wise provided for), Sundays and six statutory holidays, double time.

Minimum wage rate for journeymen plumbers and steamfitters: 95 cents per hour.

"Journemen required on out-of-town work shall have their fare and board paid, but this shall apply only to one plumber and one steamfitter on each job, time travelling to and from such work shall be paid at the rate of single time when travelling. If travelling at night when sleeper is provided men will be paid regular working hours. Other Journeymen required will only receive the rate of wages hereby prescribed and will be allowed transportation and travelling time to and from work."

### Physique of British Workmen

The Industrial Health Research Board, Great Britain, has published a report entitled "The Physique of Man in Industry," being the results of an extensive inquiry. The material of the report contains information about 13,656 individuals sampled from the various occupational subdivisions listed in the 1921 Census of England and Wales, including a sample of 1,328 unemployed men and 1,735 university undergraduates. For nearly every one of these individuals details were recorded of height, weight, strength of grip and strength of lift or pull. The Board believe that this information, which took several years to collect and analyze, constitutes a valuable contribution to anthropometric knowledge.

With regard to the particular characteristics examined, some general conclusions have been reached about the changes which occur with advancing age, and the variations which are found between men from geographically separated industrial centres, between the office worker and the factory hand and between employed and a small sample of unemployed. The small sample of the unemployed was drawn from a particular group, i.e. the class on the labour market last to be employed when work is abundant, and the first to be discharged when the work is scarce; and so was not truly representative of the unemployed as a whole.

It was stated that generalisations from data of this kind must necessarily be tentative. Definite conclusions about the average physique of men in the different age groups may, for instance, be vitiated by the fact that some three-quarters of a million men who were killed in the War 1914-1918 were possibly above the average in height, weight, and physique. Some of these men would have come within the scope of this report, and mainly in the 35-55 age group—which now, therefore, may appear as shorter and weaker than the normal average (on the other hand there is a general tendency for those engaged particularly on strenuous labour, to carry themselves less erectly as age advances).

It was further pointed out that physique and physical fitness, however, are terms with very different meanings, and data about

height, weight, and strength, can afford only limited indications of physical states of health; and that the value of the inquiry would have been greatly enhanced had it been possible to include tests for physical fitness and to collect evidence of states of nutrition. The latter was not attempted as there is no reliable yard-stick for measuring nutrition and the former was not found to be possible.

The question whether the physical standards of industrial entrants are being maintained or are deteriorating is one of much importance, on which the Board feel that there is need for exact information. This, it is thought, should be more easily obtained now that the larger industrial firms are increasingly employing whole-time medical officers, part of whose duties it is to record information as to the physical state of the workers under their care.

The average values for the three groups examined are as follows:—

	Height in.	Weight lb.	Grip lb.	Pull lb.
Employed . . .	66.54	134.75	108.9	362.56
Unemployed . .	65.63	127.27	94.60	313.94
Students . . .	68.62	138.20	113.30	366.52

The average elbow height of the employed men was approximately 43 in. Hence it was considered that the comfortable height of a working bench for the average man standing should be about 38 in.

In the case of the employed the maximum height seems to be reached at about 20 to 21 years. The data shows a definite increase in grip to about 20 years of age, then it is held uniform till a slow decline sets in about 40. With pull there is an increase up to approximately 25½-27½ years when the maximum seems to be reached then at about 30 years a slow but steady decline sets in.

As the unemployed group contained a greater percentage of older men correction was made for age, and also for occupation, to give a more correct comparison with the physique of the employed. When this was done the unemployed were found to be on the whole a little inferior in weight and definitely inferior in strength.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1935

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was toward slightly higher levels, the cost of the weekly family budget in terms of retail prices being higher, due mainly to a seasonal increase in the cost of foods, while the Dominion Bureau of Statistics index number of wholesale prices showed a fractional advance.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.73 at the beginning of August as compared with \$7.53 for July; \$7.51 for August, 1934; \$11.63 for August, 1929; \$11.44 for August, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.68 for August, 1914. In the list of foods included price changes were slight except for substantial seasonal advances in potatoes and eggs. Fractional increases occurred in the prices of mutton, pork, bacon, lard, butter and evaporated apples and slight declines in beef, cheese and beans. Including the cost of fuel and rent with that of foods the total budget was \$16.15 at the beginning of August as compared with \$15.94 for July; \$15.92 for August, 1934; \$15.41 for June, 1933 (the low point in recent years); \$21.90 for August, 1929; \$21.98 for August, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.41 for August, 1914. The cost of fuel was little changed there being an advance in the price of coal and a decline in the price of wood. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was little changed at 71.6 for August as compared with 71.5 for July. The price of wheat averaged higher for the month, while oats and barley were lower. In non-ferrous metals copper was higher and silver and tin lower. In textiles raw silk continued to advance and raw cotton was lower. Raw sugar showed a substantial increase and eggs were seasonally higher. Comparative figures for the index number for certain earlier dates are 72.3 for August, 1934; 63.5 for February, 1933 (the low point in recent years); 98.4 for August, 1929; 99.1 for August, 1926; 164.5 for May, 1920 (the post war peak); and 66.1 for August, 1914.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August of seventy-one staple foodstuffs, groceries, coal,

wood and coal oil and the rent of a six-roomed house in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

(Continued on page 879)

\*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 871)

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market

conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

## Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workmen's families in cities since 1913. The figures for food are calculated

from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

Beef prices, which had advanced in the average during the first seven months in the year, were downward in August. Sirloin steak averaged 25 cents per pound as compared with 25.3 cents in the previous month and 20 cents in January. Rib roast averaged 18.3 cents per pound in August and 18.9 cents in July, and shoulder roast 13.3 cents per pound in August as compared with 14 cents in July. Veal also was slightly lower averaging 12.7 cents per pound. Pork products were higher in many localities and fresh roast advanced in the average from 22.5 cents per pound in July to 22.7 cents in August; bacon from 30.2 cents per pound to 30.5 cents and boiled ham from 50.4 cents per pound to 52.5 cents. Lard averaged one-half cent per pound higher at 15.9 cents.

Eggs were generally higher, fresh being up in the average from 24.7 cents per dozen to 27.7 cents and cooking from 21.2 cents to 23.7 cents. Prices in the prairie provinces were lower than in other localities. Butter prices averaged fractionally higher. The Dominion average price for bread has been unchanged since March at 5.9 cents per pound. Flour also has changed little during this period. The price of potatoes was substantially higher, quotations being mostly for the new crop, except in the Maritime provinces where the prices reported were still mostly for the 1934 crop. The average price in August was \$1.24 for ninety pounds as compared with 76 cents in July and \$1.22 in August, 1934. Higher prices for United States anthracite coal were received from several cities and the Dominion average was up from \$14.19 per ton to \$14.27. Rent was unchanged.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$14.50; Windsor, Nova Scotia, \$16.50; Charlottetown, \$12.90; Moncton, \$16; Saint John, \$13.50; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$13.25; Montreal, \$13.75; Ottawa, \$15.25; Kingston, \$14.50; Belleville, \$14.50; Peterborough, \$16; Oshawa, \$14.25; Toronto, \$14.50; St. Catharines, \$14.75; Hamilton, \$13.50; Brantford, \$16.75; Galt, \$16.50; Windsor, \$12.50; Sudbury, \$17.50; Cobalt, \$19; Timmins, \$19.50; Port Arthur, \$16; Fort William, \$16; Winnipeg, \$19.50.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices showed considerable fluctuation during the month. Conflicting reports as to weather conditions in the Argentine, together with the official reports of Canada and United States' crops and the unsettled political situation in Europe were mentioned as factors contributing to the movement. Prices for the month averaged higher than in the preceding month but slightly lower than in August last year, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, being 84.5 cents per bushel in August, 81.4 cents in July and 86 cents in August, 1934. In coarse grains, oats declined from an average price of 42.9 cents per bushel in August to 36.3 cents in July and barley from 35.5 cents per bushel to 33.9 cents. Rye and flax were slightly higher. Flour at Montreal rose 20 cents per barrel to \$5.30. The price of Ceylon rubber at New York was down from 12.6 cents per pound to 12 cents. Tire sales in the United States were said to be somewhat less during the first six months of 1935 than for the same period last year and stocks of raw rubber in England and the United States have recently increased. Raw sugar at Montreal was 10 cents per cwt. higher at \$1.88. In livestock, choice steers at Toronto averaged higher in price at \$6.55 per hundred pounds in August as compared with \$6.40 in July but at Winnipeg the price declined being \$5.39 per hundred pounds in August and \$5.67 in July. Veal calves at Toronto were up in the average from \$6.53 per hundred pounds in July to \$7.58, while lambs declined from \$8.37 per hundred pounds to \$7.25. Bacon hogs were higher at Toronto and Winnipeg, the price in the former market averaging \$9.92 for August and \$9.66 for July, and on the latter market the August average price was \$9.14 as compared with \$8.58 for July. The price of creamery butter at Montreal averaged

22·6 cents per pound in August, 21·9 cents in July and 20·9 cents in August, 1934. Stocks in storage were reported to be about 5 per cent less than a year ago. Fresh eggs at Montreal advanced from 26·8 cents per dozen in July to 30·4 cents in August and at Winnipeg from 24 cents per dozen to 26·8 cents. The price of raw cotton at New York averaged lower at 11·5 cents per pound in August, as compared with 12·3 cents in July and 13·1

cents in August, 1934. Raw silk advanced from \$1·46 per pound in July to \$1·79 in August. The price in August, 1934, was \$1·19. In non-ferrous metals electrolytic copper at Montreal rose from \$8·32 per hundred pounds to \$8·68, while tin at Toronto was down from 57 cents per pound to 53·5 cents, and silver at New York from 68·4 cents per ounce to 66·6 cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the July issue of the LABOUR GAZETTE.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 88·0 for July, a decrease of 0·5 per cent for the month. All three food groups showed a decline for the month, the greatest being a fall of 3·6 per cent in cereals. Industrial materials as a whole were 0·3 per cent higher; among the changes recorded was an advance of 4 per cent in wool prices.

The *Statist* index number, on the base 1867-1877=100, was 84·3 at the end of July, an advance of 0·7 per cent for the month. Both foodstuffs and industrial materials registered a small increase, the vegetable food and minerals groups showing the principal advances.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 143 at the first of August, showing no change from the previous month. All groups were unchanged. Among foods, reductions in the prices of potatoes were offset by increases in the prices of eggs and butter.

### Italy

WHOLESALE PRICES.—The index number of the Provincial Council of Corporate Economy, Milan, on the base 1913=100, was 314·51 for June, an increase of 3·3 per cent for the month. All groups were included in the increase except chemical products and construction materials which were slightly lower than in the previous month.

### New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1383 for June, an increase of 0·9 per cent for the month due to increases in all of the main groups except textile manu-

factures and non-metallic minerals and their products which were slightly lower.

### India

WHOLESALE PRICES.—The index number of the Labour Office, Bombay, of wholesale prices in Bombay, on the base July, 1914=100, was 99 for June, showing no change from the May level. Increases were noted in all of the food groups except pulses. Of the non-foods, cotton showed a decrease, while other groups were unchanged.

COST OF LIVING.—The index number of the Labour Office, Bombay, of the cost of living in Bombay, on the base July, 1914=100, was 101 for June, an increase of 1 per cent for the month due to an advance in food prices.

### United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 79·4 for July, a decrease of 0·5 per cent for the month. Of the main groups, seven showed decreases for the month, while the other three, namely hides and leather products, textile products and fuel and lighting materials, were higher.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is the sum total of the prices per pound of 96 commodities of common consumption, was \$9·9185 at August 1, an advance of 0·8 per cent for the month. Of the thirteen groups, six were higher, chiefly the food groups and the textile and metals groups, five were lower and two were unchanged.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the cost *per capita* of a year's supply of commodities was \$171·511 at August 1, an increase of 0·03 per cent for the month. Increases in bread-stuffs, dairy and garden produce, clothing and metals were partly offset by declines in meat, "other food" and miscellaneous commodities.

COST OF LIVING.—The National Industrial Conference Board index number, on the base 1923=100, was 82·6 for July, a decrease of 0·1 per cent for the month due to slightly lower prices for food and clothing.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Workman Awarded Wage Claim Under Collective Labour Agreements Extension Act

In the Superior Court of Quebec, action was instituted by a labourer claiming a wage balance of \$74.72 by reason of his having been employed by the defendant as a labourer at a rate of 15 cents an hour instead of 35 cents to which he claimed he was entitled under the Collective Labour Agreements Extension Act. He also claimed a workman's privilege to an amount of \$39.90.

It appears that plaintiff at the time he was engaged in the work in question had been unemployed for some time previously, belonged to no professional syndicate, trade union or body and was engaged on the work for charitable reasons. Defendant is not a builder or contractor or a person engaged in the building trade. However, the work on which plaintiff was engaged was in connection with the repairing of a large ice house, the property of the defendant. According to the evidence of the defendant, the work was not a simple repair undertaking. It was work required by the old age and condition of the building and entailed the reconstruction of the walls. These repairs were of a nature of *grosses réparations*.

As regards this particular case the Court accepted the findings in the cases of *Michaud v. Forest* (LABOUR GAZETTE, March, 1935, page 306) and *Bertrand v. Forest* (LABOUR GAZETTE, June, 1935, page 598) and considered that there is no reason to reiterate or enlarge on the reasons set forth in these two judgments.

Accordingly, the Court ruled that "a proprietor who is not a builder or contractor or a person engaged in the building trade and makes repairs to his property (ice house) amounting to *grosses réparation* is bound by the Collective Labour Agreements Extension Act and the Orders in Council relating thereto as to the rates of wages payable to labourers; and also that a labourer belonging to no professional syndicate is entitled to such rates of salary and also to a privilege upon the owner's property."

The Court decided that the plaintiff's claim for remuneration at the rate of 35 cents an hour, instead of 15 cents an hour, was well-founded, and ordered the defendant to pay

plaintiff the sum of \$74.72 with interest from date of service of action and costs, and declared the defendant's immovable property charged and hypothecated under a workmen's privilege to an amount of \$39.30 with interests and costs.

*Lahumiere v. Dupuis* (1935) 73. *Rapports Judiciaires de Québec, Cour Supérieure*, 339.

### Waitress Not Domestic Servant as Excluded From Workmen's Compensation Act

A waitress' helper (plaintiff) employed at a basement lunch counter owned and conducted by the defendant company in its department store was injured by slipping on the floor of the passage-way between the counter and the kitchen inside the enclosure made by the counter.

In the resulting action before the Supreme Court of British Columbia, one of the chief contentions of the defendant company was that the nature of the employment constituted the plaintiff a domestic servant, and therefore beyond the scope of the Workmen's Compensation Act.

In the judgment of the Court it was held that: (1) the plaintiff was not a domestic servant within the meaning of the Workmen's Compensation Act; (2) said part of defendant company's business was not one to which part I of the Workmen's Compensation Act applies, but one to which part II thereof applies (Part II deals with "Liability of Employers in Industries Not Within the Scope of Part I"); (3) The place of employment and its equipment was part of the ways, buildings and premises connected with and used by the defendant in its business; (4) The floor was to the knowledge of the defendant defective owing to its slippery condition; (5) This defect caused the plaintiff's injuries; and (6) There had been no voluntary assumption of the risk.

On these grounds, the defendant company was found liable for damages, assessed as follows: General damages, \$2,000; and special damages, \$200.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

THERE was an increase in employment at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 9,355 firms, each with a minimum of 15 employees, representing practically all industries except agriculture, fishing, hunting and highly specialized business operations. These firms employed 964,647 persons, or 15,062 more than in the preceding month. The experience of the last fourteen years shows, on the average, a slight recession in industrial activity between August 1 and September 1, so that the expansion indicated this year is unusually interesting. The employment index number (with the average for the calendar year 1926 as the base equal to 100) stood at 102.7 on September 1, as compared with 101.1 on August 1, 1935, and with 98.8 on the same date in 1934. On September 1 of the thirteen preceding years of the record the index was as follows: 1933, 88.5; 1932, 86.0; 1931, 107.1; 1930, 116.6; 1929, 126.8; 1928, 119.1; 1927, 111.0; 1926, 106.2; 1925, 97.8; 1924, 94.2; 1923, 101.2; 1922, 94.8, and 1921, 89.8.

At the beginning of September, 1935, the percentage of idleness reported to the Department of Labour by local trade unions stood at 14.2, contrasted with percentages of 15.1 at the beginning of August, 1935, and 16.5 at the beginning of September, 1934. The percentage for September was based on the reports tabulated from 1,727 labour organizations, involving a membership of 166,636 persons.

Reports received by the Department of Labour from offices of the Employment Service of Canada during August, 1935, showed that the volume of business, as indicated by the average daily placements effected, was higher than that of the preceding month, as well as that of the corresponding month a year ago, this gain being largely due to increased placements in farming. Vacancies in August, 1935, numbered 40,164, applications 60,363, and placements in regular and casual employment 37,566.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was little changed at \$16.16 at the beginning of September as compared with \$16.15 for August. Figures for certain earlier dates are \$15.87 for September, 1934; \$15.41 for June, 1933 (the low point in recent years); \$21.90 for September, 1929; \$21.15 for September, 1926; \$22.37 for September, 1921; \$26.92 for July, 1920 (the post-war peak); and \$14.33 for September, 1914. The three groups were practically unchanged, in foods a decline in the cost of beef and potatoes being offset by advances in bacon and eggs. In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 advanced from 71.6 for August to 72.3 for September. Comparative figures for certain earlier dates are 72.0 for September, 1934; 63.5 for February, 1933 (the low point in recent years); 97.8 for September, 1929; 98.5 for September, 1926; 164.5 for May, 1920 (the post-war peak); and 67.2 for September, 1914.

The latest information available reflecting industrial conditions in Canada is given in the table on page 884. The index of the physical volume of business in August was nearly five per cent higher than in the preceding month, all of the principal factors used in the construction of the index showing advances except car loadings which was slightly lower. The index numbers for mineral production, construction, electric power output and exports were substantially higher, while those for manufacturing, trade employment and imports indicated smaller gains. All of the above factors, except car loadings, were higher in August, 1935, than in the same month of the previous year. Information available for September shows improvement in wholesale prices, employment, car loadings and earnings of the Canadian National Railways both as compared with the previous month and with September, 1934. Contracts awarded were lower than in August but higher than in September, 1934. The amount of sugar manufactured during the four weeks ended Septem-

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(4) Figures for end of previous month.

(5) Figures for four weeks ending September 28, 1935 and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending September 7, August 10, and July 13, 1935; September 8, August 11, and July 14, 1934.

(7) MacLean's Building Review.

ber 7 was lower than in the previous period and in the corresponding four weeks of 1934.

During September there were on record eighteen strikes and lockouts, involving 5,691 workers with a time loss of 48,351 man working days, as compared with 20 disputes during August involving 7,573 workers and causing a time loss of 49,429 days. Nearly one-half of the time loss was due to strikes of longshoremen and water transport workers in Vancouver and other ports in British Columbia in progress since June. Other strikes of importance involved women's clothing factory workers in Montreal, coal miners in the Drumheller district in Alberta, and metal workers at Welland, Ont. In September, 1934, there were 20 disputes, involving 5,572 workers, with a time loss of 59,490 days, due largely to strikes of dressmakers in Montreal and pulpwood cutters in northern Ontario. Of the eighteen disputes in September, eight were recorded as terminated, four resulting in favour of the workers involved, two in favour of the employers concerned, while compromise settlements were reached in two cases. The disputes unternminated at the end of the month numbered ten and involved approximately 2,900 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off or definitely declared terminated by the unions involved.

#### **Industrial Disputes Investigation Act**

During the past month the Department received the findings of the Board of Conciliation and Investigation established in connection with a dispute between

the Canadian National Telegraphs and certain of its employees throughout Canada. The employees are classed as repeater attendants, radio attendants, manager-operators and operators, members of Canadian National System, Division No. 45, Commercial Telegraphers Union of North America.

The personnel of another Board was completed by the appointment of a chairman in the case of a dispute between the Winnipeg Electric Company and affiliated companies, and certain of their employees, while application was made for the establishment of a Board by the employees of Canadian Collieries (Dunsmuir) Limited, at Cumberland, B.C. The text of the Board reports in connection with the dispute concerning Canadian National Telegraphs and certain of their employees is included in the account of recent proceedings under the Act which appears on page 888 of this issue.

#### **Transference of administration of Combines Investigation Act**

Under the Combines Investigation Act Amendment Act, 1935, which came into force on October 1, administration of the Combines Investigation Act was transferred on that date from the jurisdiction of the Department of Labour to the newly established Dominion Trade and Industry Commission. The legislation constituting the Dominion Trade and Industry Commission and amending the Combines Investigation Act was briefly reviewed in the LABOUR GAZETTE issues of June and July, 1935 (June, p. 507; July, p. 624).

The Dominion Trade and Industry Commission Act, 1935, establishing a Dominion Trade Commission with wide powers of investigation and recommendation with respect to trade practices, also came into force on October 1. The duties of the Commission, as noted in the LABOUR GAZETTE for June, include the administration of the Combines Investigation Act, and action by way of investigation and recommendation as authorized by the Trade and Industry Commission Act with relation to commodity standards, unfair trade practices, price and production agreements and fair trade conferences. The members of the Trade and Industry Commission, who are also the members of the Tariff Board, are Hon. G. H. Sedgewick, K.C., Chief Commissioner; M. N. Campbell, Assistant Chief Commissioner, and C. P. Hebert.

#### **Criminal Code amendments relating to price discrimination**

Additional provisions relating to restraint of trade were enacted as section 498A of the Criminal Code in chapter 56 of the 1935 statutes. The new section, which provides against engaging in certain policies of selling goods at low prices for the purposes of destroying competition or of eliminating competitors, and against specified types of price discrimination, reads as follows:

"498A. (1) Every person engaged in trade or commerce or industry is guilty of an indictable offence and liable to a penalty not exceeding one thousand dollars or to one month's imprisonment, or, if a corporation, to a penalty not exceeding five thousand dollars, who

(a) is a party or privy to, or assists in, any transaction of sale which discriminates to his knowledge, against competitors of the purchaser in that any discount, rebate or allowance is granted to the purchaser over and above any discount, rebate or allowance available at the time of such transaction to the afore-

said competitors in respect of a sale of goods of like quality and quantity;

The provisions of this paragraph shall not, however, prevent a co-operative society returning to producers or consumers, or a co-operative wholesale society returning to its constituent retail members, the whole or any part of the net surplus made in its trading operations in proportion to purchases made from or sales to the society;

(b) engages in a policy of selling goods in any area of Canada at prices lower than those exacted by such seller elsewhere in Canada, for the purpose of destroying competition or eliminating a competitor in such part of Canada;

(c) engages in a policy of selling goods at prices unreasonably low for the purpose of destroying competition or eliminating a competitor."

This section of the Criminal Code came into force on September 1, 1935.

#### **Ottawa Conference of British Commonwealth Statisticians**

The second conference of British Commonwealth Statisticians, as stated in the *LABOUR GAZETTE* for September, 1935, page 797, commenced its sessions at

Ottawa on September 13,

and concluded its work on October 9. The first conference was held in London in 1920. Representatives from government statistical offices were present from Great Britain and Northern Ireland, the Irish Free State, India, South Africa, Australia, New Zealand, Newfoundland and Canada. In addition to the official delegates from Canada, representatives of various governmental departments attended the sessions and served on committees. The British Ministry of Labour was represented by Mr. E. C. Ramsbottom, O.B.E., Director of Statistics. Dr. R. H. Coats, Dominion Statistician for Canada, and a former Editor of the *LABOUR GAZETTE*, was Chairman of the conference.

The conference considered methods of securing uniformity in the collection, compilation and publication of statistics in British Empire countries and international obligations regarding statistics with particular reference to the League of Nations, the International Labour Office, the International Institute of Agriculture, and the International Institute of Commerce.

Resolutions were adopted relative to statistics on the following subjects: Agriculture, Fisheries, Forestry, Mining, Industrial Production, Uniformity of Statistical Classifications in Commodities, Industries and Occupations, Classifications of Commodities in Trade

Statistics, Gold Movements in International Trade, Source of Imports and Destination of Exports, Valuation of Imports and Exports, Balance of International Payments, Index Numbers of Prices and Volume of External Trade Wholesale Prices, Retail Prices and the Cost of Living, Labour Statistics, Road Transport, Calculating Machinery, Campfire Broadcasts.

The resolutions will be embodied in the report of the conference to the Governments represented. The report, when published, will be dealt with in a later issue of the *LABOUR GAZETTE*.

#### **Canadian Hospital Council dis- cusses health insurance**

Meeting in convention at Ottawa on October 8, 9 and 10, the Canadian Hospital Council approved the appointment of a special committee to study health insurance in relation to hos-

pitals and to draft underlying principles for the guidance of hospitals under any projected legislation (reference was made in the *LABOUR GAZETTE* of May, 1935, pages 393-4, to the intention of the Federal government to institute a Royal Commission to study health conditions in Canada).

Another feature of the convention was the discussion on the proposal to unify hospital statistical returns throughout Canada. This section of the agenda was under the chairmanship of Dr. R. H. Coats, Dominion Statistician.

#### **Conventions of labour organizations**

The annual conventions of the Trades and Labour Congress of Canada and the Federation of Catholic Workers of Canada were

held during the past month. Featuring these gatherings were the discussions and resolutions on social and economic problems as reflected in recent legislation.

In addition, another important body—the British Trades Union Congress—held its annual convention in September, and its decisions likewise mirrored the views of the trade unions in the sphere of social, industrial and national affairs.

Reviews of these conventions appear elsewhere in this issue.

#### **Industrial Census, Union of South Africa**

From the Office of Census and Statistics, Union of South Africa, there has recently been received a publication giving the re-

sults of the sixteenth industrial census of industrial establishments. This census, presenting statistics of factories and productive

industries (excluding mining and quarrying) in the Union, covers the business year ended at any date not earlier than January 1, 1933, and not later than December 31, 1933. It is pointed out that as the last industrial census was taken in 1930, there is no means of measuring the extent of the depression nor the amount of recovery achieved from the worst year. All that can be compared is the position on the average of 1932-33 relative to the year 1929-30 which represented the commencement of the downward swing. Measured on this basis, the report states there was a decrease with regard to all undertakings of 26 establishments, 3,685 European and 22,130 non-European employees, £20,850,622 in gross output and £7,392,276 in value added to materials. That is to say there was a fall of 4 per cent in European and 12 per cent in total employment, 19 per cent in gross output and 13½ per cent in value added to materials. Prices of manufactured articles where quantities are given fell 11 per cent, which, if representative of other articles, would mean that the total volume of gross production was about 8 per cent less than in 1929-30.

#### **Federal labour legislation in U.S.A. during 1935**

A summary of the major federal labour legislation enacted in the United States during 1935 was given in the September issue of the Labour Information

Bureau, published by the United States Department of Labor. Some of these enactments have been noted in previous issues of the LABOUR GAZETTE, viz: the National Labour Relations Act (April, 1935, page 343 and July, 1935, page 605); Emergency Relief Appropriation Act (April, 1935, page 342); Social Security Act (September, 1935, page 801) and the Railroad Retirement Act (March, 1935, page 226).

In addition to these measures there is the Bituminous Coal Conservation Act, which aims to establish the bituminous coal mining industry, and to protect the right of mine workers to organize and bargain collectively with their employers.

Public Act No. 403 provides that all contracts in excess of \$2,000 for construction, alteration, or repair of public buildings or public works, to which the United States or the District of Columbia is a party, must contain a provision stating the minimum wages to be paid various classes of labourers or mechanics employed on these projects. The wages are to be determined by the Secretary of Labour in accordance with those prevailing for the corresponding class of labourers and mechanics employed on similar work.

The Wagner-Peyser Act was amended to appropriate for the U. S. Employment Service \$4,000,000 for each fiscal year up to and including the fiscal year ending June 30, 1938, and such annual sums thereafter as Congress may deem necessary for the purpose of establishing and maintaining systems of free public employment offices in the several States. The director of the U. S. Employment Service is authorized to distribute this money in proportion to the total population of the State, except that no State shall be allotted less than \$10,000.

The Medical Research Council of Great Britain has recently published results of its investigations regarding physical methods for the estimation of dust hazards in industry with special reference to the occupation of stonemason. In a detailed analysis of the problem the report observes:

"It has been possible to draw definite conclusions that it is undesirable for masons to work in closed yards, that on calm days the exposure may be three or more times that on an average windy day, and that punching (shearing off large quantities of the stone by heavy blows on a pointed tool) may account for about half the amount of dust that the mason may inhale. The results have indicated the direction in which preventive measures could be most successfully applied, especially in regard to the wearing of respirators and the brushing of stones free from accumulated dust."

The *Canada Gazette* of September 21, 1935, contains the by-laws of the pilotage district of Sydney, Nova Scotia. The regulations define the boundaries of the pilotage district, sets forth the rates for pilotage, licence fees, together with sections dealing with pilotage funds, retirement pensions, leave, discipline, etc. Reference to regulations governing pilots in the district of the Restigouche River and Saint John, New Brunswick, were given in the LABOUR GAZETTE, January, 1935, page 31, and April, 1935, page 321.

By announcement in the British Columbia Gazette, the Apprenticeship Act was proclaimed in effect, dating from September 9. The provisions of this enactment, which are largely similar to the Ontario Act, were outlined in the LABOUR GAZETTE for June, 1935, at page 522.

The twenty-second annual meeting of the International Association of Industrial Accident Boards and Commissions was held at Asheville, North Carolina, U.S.A., from September 30, to October 3, 1935.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**A**N application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under The Industrial Disputes Investigation Act was received in the Department of Labour during September from employees of the Canadian Collieries (Dunsmuir) Limited, Cumberland, B.C. The dispute related to the alleged introduction by the company of a new contract system and the employees' request for re-establishment of the rotation system of employment. About 45 employees are stated to be directly affected by the dispute, and approximately 475 indirectly.

The personnel of the Board of Conciliation and Investigation established to deal with a dispute regarding wages and working conditions between the Winnipeg Electric Company and affiliated companies and certain of their employees was completed on September 25 by the appointment of Mr. Robert Jacob, K.C., of Winnipeg, as chairman, the appointment being made by the Minister of Labour on the joint recommendation of the other Board members, namely, Messrs. C. A. Clendenning and R. B. Russell, both of Winnipeg, nominees of the employers and employees, respectively. The companies affiliated with the Winnipeg Electric Company are the Manitoba Power Company, Ltd., the Northwestern Power Company, Ltd., and the Winnipeg, Selkirk and Lake Winnipeg Railway Company. Ninety-six employees, members of the Association of Substation and Hydro Plant Employees, are said to be directly affected by this dispute.

The text of the findings of the Board of Conciliation and Investigation which dealt

with a wages dispute between various coal mining companies in the Drumheller, Rosedale and Wayne districts in Alberta and certain of their employees being members of District 18, United Mine Workers of America, was printed in full in the September issue of the *LABOUR GAZETTE*, page 804. The majority report of the Board, signed by the chairman, the Honourable Mr. Justice Horace Harvey, and the employees' nominee, Mr. A. J. Morrison, recommended a five per cent increase in wage rates. The miners on August 26, by a referendum vote, accepted this recommendation, and agreements were subsequently signed with five of the eight coal mining companies concerned, namely, the Alberta Block Coal Company, Ltd., the Newcastle Coal Company, Ltd., the Midland Coal Mining Company, Ltd., the Western Gem Coal Company, Ltd., and the Red Deer Valley Coal Company, Ltd. Failure of the management of three coal companies to sign similar agreements resulted in strikes occurring on September 4 in the mines of these companies, namely, the Jewel Collieries, Ltd., at Wayne, the Rosedale Coal Company, Ltd., at Rosedale, and the Great West Coal Company, Ltd. (Star Mine), at Aerial, about 400 men being involved. The employees of the Jewel Collieries, numbering about 100, returned to work on September 13, when the officials of that company signed an agreement adopting the Board's recommendation. The 300 employees of the Rosedale and Great West Coal Companies remained out until October 4, these two mines being the last of the eight to agree to give the miners the wage increase of five per cent recommended in the report of the Board of Conciliation and Investigation.

### Report of Board in Dispute Between the Canadian National Telegraphs and Certain of its Employees

The Board of Conciliation and Investigation established to deal with a dispute between the Canadian National Telegraphs and certain of its employees throughout Canada being repeater attendants, radio attendants, manager-operators and operators, members of Canadian National System Division No. 43, Commercial Telegraphers Union of North America, reported to the Minister of Labour at the close of September. The personnel of the Board was as follows: Mr. L. B. Spencer, K.C., of Welland, Ontario, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members, Messrs. Geoffrey S. O'Brien and H. P.

Green, both of Toronto, nominated by the employer and employees respectively.

The dispute concerned two specific grievances arising out of (a) the company's refusal to recognize the right of the union to represent approximately 50 employees in the Testing and Regulating Department whose positions, in some cases, had been created subsequent to the present working agreement taking effect on October 1, 1927; and (b) the action of the company in abolishing seven or more scheduled telegraph offices and operating them as commission offices, the employees being retained on a commission basis with a certain monthly guarantee.

The findings of the Board with respect to the first-mentioned grievance were unanimous. The Board's report concerning the second matter in dispute, known as "the Commission Office Dispute," was signed by the chairman and Mr. Green, a minority report being submitted by Mr. O'Brian. The text of these reports is given below.

### Report of Board

*In the matter of the Industrial Disputes Investigation Act and of a dispute between Canadian National Telegraphs and certain of its employees, being repeater attendants, manager operators and operators, members of Canadian National System Division No. 43 Commercial Telegraphers Union of North America.*

The Hon. WESLEY A. GORDON, K.C., M.P.,  
Minister of Labour,  
Ottawa, Canada.

Sir,—The undersigned members of the Board of Conciliation and Investigation established by your order on the 8th day of August, 1935, under the provisions of the above act, have the honour to submit the following report:

Application for the establishment of the Board was made by the Union on the 17th day of May, 1935, and the disputes which have been referred to the Board are stated therein as,—

*First Dispute.*—The result of the Company's action in refusing to recognize certain employees of the Testing and Regulating Department assigned to duties as Repeater Attendants and Radio Attendants as being scheduled employees within the meaning of that term and the Company's refusal to recognize the Union's right to represent the employees concerned.

*Second Dispute.*—Known as "The Commission Office Dispute," whereby the Company's action scheduled offices have been converted into Commission offices, resulting in reducing the scheduled wage ratings and changing the scheduled working conditions at the offices concerned.

A preliminary meeting to organize the Board was held in Toronto on the 13th of August, and the sittings of the Board commenced on the 19th of August and proceeded daily until and including the 21st of August. During the sittings the Company and the Union were actively represented. The Board was impressed with the careful and thorough preparation on both sides, with their moderate submission of their arguments and with their temperate and friendly demeanour towards each other.

During the sittings the representatives of the Union and the Company met in an en-

deavour to solve their difficulty, but reported back to the Board that they were unable to arrive at any satisfactory settlement.

The sittings of the Board were again held on the 14th and 16th days of September, when an unanimous decision was arrived at with regard to the first dispute, and the final determination of the second dispute was left over until the 20th, and 25th, days of September, when the members met and finished the business of the Board.

In submitting our report we propose to deal with it under the headings hereinbefore set forth.

*First Dispute.*—The result of the Company's action in refusing to recognize certain employees of the Testing and Regulating Department assigned to duties as Repeater Attendants and Radio Attendants as being scheduled employees within the meaning of that term and the Company's refusal to recognize the Union's right to represent the employees concerned.

The Union in support of its contention, cites Article 1, Clause 1 of the 1927 Agreement, which reads as follows:—

"Employees assigned to commercial telegraph service, whether operated by Morse system, telephone or automatic device of any character, or who are required to devote any portion of their time to the transmission or receiving of telegraph matter by any device whatsoever, will be considered commercial telegraphers within the meaning of this schedule. This does not apply to or include the following: All Chief Operators, All Assistant Chief Operators."

and Article 1, Clause 6, Paragraph 1:—

"When additional telegraph positions, coming within the scope of this schedule, are created, compensation will be fixed in conformity with that for positions of the same class as shown in this schedule, and will immediately become a part thereof."

We do not think that it is correct to state, as the Union contend, that the positions of Repeater Attendants have been created *principally* since the Schedule took effect October 1, 1927. It has been established to our satisfaction that at the time the agreement was entered into, namely, October, 1927, there were five Repeater station offices at the following points,—Parry Sound, Capreol, Hornepayne, Sioux Lookout, in Ontario, and Kamloops, B.C., and that within two months two more were opened at Foleyet and Jellicoe, Ontario, and that to-day there are fifteen offices; these station offices surely must have been present in the minds of the parties conducting the negotiations which resulted in the 1927 agreement, and it must have been the intention to either include or exclude them from the agreement, therefore the question for us to determine is whether they come within the schedule under the heading of "Plant

Chiefs" or whether they are excluded with "Chief Operators and Assistant Chief Operators," or whether they come within Article 1, Clause 6, Paragraph 1,—“When additional telegraph positions, coming within the scope of this schedule, etc.”

We are of the opinion that Clause 6, Paragraph 1, does not bear the construction put upon it by the Union, but that it is simply to take care of additional telegraph positions of a class already provided for.

The Company contends that the positions in question are vital positions in a national transmission system and that they are of a supervisory character and fall within the excluded list of Chief Operators or Assistant Chief Operators. In support of the Company's contention that it is their settled policy to exclude supervisory positions, we allowed the Company to file a letter from the Vice-President to Mr. Barber, General Manager, dated August 4, 1927, and it is also admitted by the Union that the Company at that time had allowed the inclusion of certain supervisory positions to strengthen the Union's hands against the secession movement. The Company further established that similar positions in the Canadian Pacific Telegraph transmission system are treated as supervisory positions.

We do not disagree with the position taken by the Company in their desire to maintain vital positions as non-scheduled offices, but we find ourselves confined to an interpretation of the 1927 Agreement.

The Board are unable to give effect to the Company's contention that these positions fall within the excluded class of "Chief Operators or Assistant Chief Operators." It is true that they are alone (with the exception in some instances of Radio Attendants) and in that sense may be said to be Chief Operator and be in a supervisory position, but it seems to us that more can be learned as to what the agreement was meant to include or exclude by an examination of the facts at the time this agreement was negotiated. As hereinbefore pointed out, five Repeater stations were already in existence. If they were known then as Repeater Attendants there would be nothing for the Board to do but to find that they were overlooked in drawing the Schedule and exclude them because care had been taken to expressly exclude Chief Operators and Assistant Chief Operators. But, as we have heretofore stated, five of these positions were in existence and it is impossible, in our opinion, to believe that these positions were overlooked. In our opinion the explanation lies in the fact, which is admitted by the Company, that these positions had formerly been known as "Wire Chiefs" and "Plant Chiefs," and that

"Plant Chiefs" were known as "Wire Chiefs," and there is, in Exhibit 3, a communication from Mr. Wells, the Superintendent, to the Manager of Nakina, confirming that as late as 1930 these positions were known to the men and the Company as "Wire Chiefs." There is further confirmation in the pay roll, Exhibit 7, where the term "Wire Chief" is used in referring to these offices at Kamloops and Sioux Lookout, which were at the time Carrier Stations in carrying on the present duties of Repeater Attendants. This covers the period when the Agreement was being negotiated, October 1 to 15, 1927.

It is admitted by the Company that although they send and receive messages, Repeater Attendants perform duties identical with those of Plant Chiefs in functional offices and which latter positions are included in the Schedule.

So far as the Company's contention that the duties of a Repeater Attendant are the same as those of a Chief Operator or Assistant Chief Operator, we have already stated they may both be to some extent supervisory and vital, nevertheless we find that for the greater part their duties and qualifications are not the same. The transmission of messages is merely incidental to the main function of an Attendant, whereas the supervision of receipt and transmission of messages is the main function of a Chief Operator or Assistant Chief Operator. We are loath to give an interpretation to the agreement that would exclude the positions of Repeater Attendants on the only sound ground that appears open to us, namely, that they were overlooked in the preparation of the agreement, and we feel that the answer is found in the statement made by Mr. McKeown,—“Wire Chiefs and Plant Chiefs were used interchangeably,” with which statement the Company's representative agreed.

So far as Radio Attendants are concerned, we are of the opinion that they are not within the Schedule. While we are of the opinion that the Radio Attendants fall within the very wide definition of Commercial Telegraphers we are also of the opinion that they are not provided for in the Schedule and for reasons stated above, Article 1, Clause 6, Paragraph 1 cannot be invoked to bring them within the Schedule.

We therefore find that Repeater Attendants should be recognized and treated as schedule positions within the meaning of the term as provided in the Agreement of October 1, 1927. We further find that Radio Attendants are not included in the Agreement of October 1, 1927.

(Sgd.) LYNN B. SPENCER, Chairman.  
(Sgd.) G. S. O'BRIAN,  
(Sgd.) H. P. GREEN.

*Second Dispute.*—Known as “The Commission Office Dispute,” where by the Company’s action scheduled offices have been converted into Commission offices, resulting in reducing the scheduled wage ratings and changing the scheduled working conditions at the offices concerned.

The undersigned members of the Board regret that they were unable to agree with the findings of their colleague, Mr. O’Brien. We have had the opportunity of reading the minority report on this branch of the dispute and we are very much impressed with the force of the argument, but, for reasons hereinafter stated, we find ourselves unable to agree with the conclusions arrived at by Mr. O’Brien.

The Company has always operated scheduled and non-scheduled offices, the non-scheduled offices existing as a rule where the volume of business would not permit the payment of scheduled wages, and it has been established that during the operation of the 1925 agreement the Company changed scheduled offices to non-scheduled offices and converted non-scheduled offices to scheduled offices, and that these changes were acquiesced in by the Union at the time the 1927 agreement was entered into.

When the parties negotiated the 1927 agreement a clause which had not hitherto appeared in the Agreement was inserted. Article 1, Clause 6, Paragraph 2:—

“When established scheduled telegraph offices or positions are to be abolished, the District Chairman shall be given fifteen days’ previous notice in writing. Bulletins covering such positions will not be issued.” The Company’s representatives assert that this clause was inserted for the express purpose of taking care of the very situation that has just been described in the preceding paragraph. Mr. Allen, the men’s representative, and who was a party at the negotiations, says that the question of conversion was never discussed. It is to be noted, however, that eight years have elapsed since the negotiations, and one’s recollection is apt to be unreliable over such a length of time. If, however, it was discussed and it was the Company’s intention to take care of this situation, the language used was unfortunate. Nor do we think it is helped by the clause inserted in the 1932 wage reduction agreement. This clause reads as follows:—

“When abolition of any established scheduled telegraph office is contemplated, the Superintendent in the District concerned, will give the district chairman an opportunity to acquaint himself of the Company’s position in such cases and be afforded an opportunity to express the employee’s position.”

The Company attempt to justify the change on the ground of falling revenue, and details

were given of the operations at Brandon and Prince Albert for the year 1932, and we feel that there is a great deal to be said for the Company’s contention that they were “applying a remedy to an unsatisfactory economic situation which would have the least disturbing effect on the employees concerned”; and no doubt the result was to keep Manager Operators and employees employed who would otherwise have had to seek new positions.

On the other hand it is contended by the Union that the earnings at any particular station should not be the yard stick to decide whether it should be a scheduled office or not, but that it should be considered as an integral part of a national system. With this contention we agree, but we do feel that there are also probably sound grounds in looking at it from this angle for applying the remedy that the Company has sought to apply, and we stress most earnestly that every effort should be made by the Union to adjust wages to meet falling revenues.

The Company’s contention that this clause covers the very thing that was in the minds of the parties at the time of the 1927 negotiations, namely, “the conversion of scheduled offices into non-scheduled or commission offices,” and that the agreement, to give it sense in view of the up-turn in business when the negotiations were entered into, one must read to mean “abolish it as far as the schedule goes,” has a great deal to be said for it. As previously stated the wording is most unfortunate and were it not for the fact that to give the interpretation that the Company contends for would be to place in the hands of one of the contracting parties the power to destroy the principles of the agreement, it might reasonably be interpreted to have the meaning prescribed to it by the Company, but it seems to the undersigned that we should hesitate to give a construction to this vexed clause that would have such far-reaching effects without being clearly satisfied that there was no doubt as to its meaning. We feel, therefore, that the proper view to take is that the parties to the negotiations failed to deal with the matter of the conversion of scheduled offices and that we must give to this clause the literal meaning attached to the word “abolish” and that the men affected are entitled to have their offices restored to their scheduled ratings and positions.

We feel very strongly that the men failed when negotiating this agreement to assert the principle for which they have so strenuously contended before the Board. That was the time to raise the issue of conversion of scheduled offices and, under the circumstances, we therefore feel that, although we have to

find that the men are entitled to be restored to their scheduled ratings and privileges, they should be content to accept a nominal allowance for arrears of salary with respect to the offices in question and that some arrangement be made between the representatives of the Company and the men with regard to offices which by reason of falling revenues come within the class of the offices heretofore converted.

All of which is respectfully submitted.

(Sgd.) LYNN B. SPENCER, Chairman.

(Sgd.) H. P. GREEN.

Dated this 25th day of September, 1935.

### Minority Report

*In the matter of Industrial Disputes Investigation Act and in the matter of differences between the Canadian National Telegraphs and certain of its employees being Repeater Attendants, Radio Attendants, Manager-Operators and Operators, Members of Canadian National System Division No. 43, Commercial Telegraphers Union of North America.*

#### MINORITY REPORT *re* SECOND DISPUTE KNOWN AS "THE COMMISSION OFFICE DISPUTE"

I regret that I cannot reconcile my findings with those of my colleagues in this aspect of the hearing.

Were it not for sub-section 2 of section 7 of the Act I would say that this part of the Dispute could not be entertained by the Board, as there appears to be an insufficient number of employees affected.

The employees' contention may be summarized thus: that with regard to scheduled telegraph offices which are or have been running at loss, the Company's only alternatives are to either continue to pay the scheduled wages, or else lock the door, pull down the blinds and throw away the key.

Whether or not the Company, by discontinuing to operate a telegraph office as a scheduled office and then opening it on a commission basis, violated the "agreement" of October, 1927, depends upon the interpretation of article 1, clause 6, paragraph 2, of the "agreement". This reads "when established scheduled telegraph offices or positions are to be abolished, the District Chairman shall be given fifteen days previous notice in writing."

I am of the opinion that "to abolish a scheduled office" means to "abolish it as far as the schedule goes," or to "cancel it as a scheduled office," or "to completely remove it from the schedule." The view was expressed that the only meaning was one of destruction or complete shutting down, and that accordingly an interpretation from the surrounding

circumstances should not be attempted. But reading the sentence as a whole I feel strongly that there is at least sufficient ambiguity to examine the situation at the time the "agreement" was made.

The present clause 6 was not in the previous "agreement" between the company and its employees, and appears for the first time in October, 1927. Up to that time business had been good. I do not think anyone foresaw that a C. N. Telegraph office might actually close its doors because business fell away. But I do think the employees foresaw scheduled offices being done away with as scheduled offices and opened up as commission offices, because during 1926 and 1927 this very thing had been done by the Company in three places. I cannot believe that the employees believed they could question the right of the company to completely close up an office if it decided to do so; one office being entirely discontinued cannot be compared to a "shut-out." Why then was this new clause drafted into the 1927 "agreement"? Surely not to cover the situation of a complete shutting down, but to cover the very thing that must have been much in the minds of the parties at that time, namely—the conversion of scheduled offices into non-scheduled or commission offices.

Referring again to the "agreement" in question, I do not think it creates any rights the violation of which would give a legal cause of action. It is a set of rules, and a list of wages. It is referred to as "an agreement" on the last page, but I believe it is more of a basis of co-operation, than a strict legal "agreement"; and it has functioned very well. Therefore I think it would be wrong to refuse to consider evidence of all circumstances attendant upon this aspect of the application.

Five years elapsed after the signing of the "agreement" before the company gave notice that certain scheduled offices would be abolished as such and an offer made to the employees to work on a commission basis. This time was long enough for either party to build up a meaning which the "agreement" does not carry. The wording used is, in the light of all the facts, and reading the sentence as a whole, unfortunately ambiguous. Other clauses in the "agreement" have been found the same. It may be that each of the parties preferred to leave the wording as it now reads, hesitating to face the issue at the time for fear the other party would gain something at the time, and preferring to wait until an opportunity arose when it could say "you have violated the meaning we put into that clause." That is conjectural but possible.

However that may be, it is my opinion that the principle involved is too important

to be decided on the grounds that "abolish" means only "close up entirely." I think clearer words should have been used, and that the very able presentation of the employees' case cannot be upheld.

The virtual effect of this would be that the company by adopting the same procedure as used at Brandon, Prince Albert, Drumheller, Moose Jaw, etc., may remove any scheduled office from the schedule at any time it wants to. I believe the company to have this power, technically, provided it gives 15 days previous notice to the District Chairman. To this view the able representatives of the employees expressed alarm lest the company "abolish" many more scheduled offices and re-open them as commission offices. I am satisfied however that no "dangerous" situation exists or that any hardship is going to be suffered. Certainly, the company is not going to "convert" offices which are doing a big business, because it would be uneconomical. I feel satisfied that the company is mindful of the interests of its employees and that if this power to

"convert" exists, it will not be abused. Exhibit 8 is a letter from the President to Mr. McEwen stating that when possible the offices in question will be re-established as scheduled offices. I think this is evidence of the fact that the Company intends to live up to the spirit of agreement which has been of great benefit to both parties.

I feel that when an opportune time arises a new agreement should be made between the company and the employees; and in conclusion deal with one point, namely—the contention of the employees that the company's proper procedure was to give notice that the whole "agreement" was at an end. The drafting of a new Agreement is a disturbing thing requiring several months' time. With general business returning very slowly, and a 10 per cent wage cut still in existence, I think both parties agree that for such an undertaking the present time is not propitious.

All of which is respectfully submitted.

(Sgd.) G. S. O'BRIAN.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Decisions

ONE new decision and a supplementary hearing in an earlier case were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, July, 1935, page 614, and in previous issues; and the fifth report of the proceedings of the Board, covering the period from October 1, 1930, to September 30, 1933, was issued as a supplement to the issue of December, 1933.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of

Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### Case No. 444—Canadian Pacific Railway (Western Lines) and the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen.

This dispute centred on the discontinuance of Raith as an established turn-around point.

Raith is located fifty-three miles west of Fort William, and it is the summit of a one per cent grade. Prior to May 29, 1934, it was the practice to run turn-around trips to Raith; the turn-around set out the entire train, returning to Fort William light, which, in effect, meant that westbound through freight trains picked up at that point, doing the necessary switching and marshalling.

Since the time stated above, instead of running turn-around as formerly, the Railway Company has been using two engines on westbound freight trains between Fort William and Raith. Prior to this time, Raith, by reason of the conditions, was a turn-around point under the Engineers' and Engineers' and Firemen's Schedules. On July 31, 1934, the following bulletin was posted at Fort William by the superintendent:

"Effective August 1, Raith will be discontinued as a turn-around point. Claims will

not be in order under Article 7, Clause 'A,' of the Engineers' and Firemen's Schedules."

In their statement, the employees contended that in keeping with general practice a formal thirty-day notice should have been given whereas the bulletin of notification was posted only one day previous to the effective date of the discontinuance. It was also claimed that so far as enginemen are concerned, Raith is just as much a turn-around point as it ever was; that if there is no longer any switching to be done there, then there is no need to discontinue it as a turn-around point for enginemen, as they only get paid for switching when that service is performed; and that if it develops there is a considerable amount of switching to be done there, then discontinuing Raith as a turn-around point simply means a reduction in compensation for enginemen performing that work.

Further, it was the opinion of the employees that business had not entirely disappeared at Raith; that since Raith is one of the oldest established turn-around points on the system and that as long as it continues to be a point at which tonnage is increased, no matter whether such tonnage increase is taken care of by running single trains, there will always be a certain amount of switching necessary; and "since the employees have been paid for that service so long it does not seem reasonable to expect them to fall in line with giving up that condition now."

The Company contended that the action taken in abolishing Raith as an established turn-around point is consistent with the practice which has been previously followed in similar circumstances. There are numerous places where helper engines are turned, and it has not been understood or heretofore contended that the turning of helper engines had any relation to the condition requiring payment to crews of trains which might be required set out or pick up at such points.

It further contends that in case of assignments and other matters of local effect, that it is not the intention of the working agreement that thirty-days' notice shall be given, nor has it been the practice to do so when establishing or abolishing turn-around points.

The Board decided that under the existing practice of operating freight trains through from Fort William to Ignace with assisting engines to Raith, in so far as engine crews running through from Fort William to Ignace are concerned, the claim of the Employees is not sustained.

### Supplement No. 3 to Case No. 426—Canadian National Railways (Atlantic Region) and Brotherhood of Maintenance of Way Employees.

This case concerned the proper rate of pay to carpenters, bridgemen, painters, etc., laid off from the Bridge and Building Department who take jobs as labourers under a bridge and building foreman. (The details with respect to this case were given in the LABOUR GAZETTE for April, 1935, page 320; August, 1934, page 735; and May, 1934, page 406).

The Board had ruled that a rate 42 cents per hour should be paid carpenters, bridgemen, etc., who had accepted jobs as labourers under a B. and B. foreman. However, it developed that the employees wished the Board to determine what men should be so paid.

It appears that the dispute had narrowed to the payment of five men in particular. In the case of these five men the employees' contention was that these men were working for regular Bridge and Building foremen and were therefore entitled to the rate of 42 cents.

The company contended that these men were employed in extra gangs at the times covered by the claims and did not perform any carpenter's or bridgemen's work.

In the opinion of the Board the men were employed in extra gangs and therefore the claim of the employees was not sustained.

A survey of occupational characteristics of persons receiving relief in 79 cities, carried out by the Federal Emergency Relief Administration in the United States, shows that 99 of every 100 households (families and single persons) on the relief rolls in Detroit contain one or more persons of the employable ages, 16 to 64 years, who want work. In only three of every 100 relief households are all those of employable age either disabled persons, young people attending school, housewives with home duties, or otherwise disqualified from the search for work. The proportion of Detroit relief households containing members who consider themselves able to work (97 per cent) was the highest found in any of the four large cities for which separate studies were made: Los Angeles, where the proportion was 95 per cent; New York, 94 per cent; and Chicago, where the percentage was considerably lower, 87 per cent. The average for the 79 cities in the country as a whole was 90 per cent.

## STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1935

THE following table shows the number of disputes, workers involved and time loss for September, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Sept., 1935.....	18	5,691	48,351
*Aug., 1935.....	20	7,573	49,429
Sept., 1934.....	20	5,572	59,490

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The substantial decrease in numbers of workers involved in strikes and lockouts recorded during September was not accompanied by corresponding decreases in numbers of disputes and in time loss in man working days because two strikes of textile and clothing workers during August involved four thousand workers but were of brief duration. A large percentage of the workers involved and time loss during both months was due to three strikes of longshoremen and water transport workers in Vancouver and other ports which began in June. The figures show little change from those for September, 1934, when strikes of dressmakers in Montreal and pulpwood cutters in northern Ontario involved large numbers of employees and caused considerable time loss.

Nine disputes, involving 1,696 workers, were carried over from August, including a dispute involving coal miners at Port Hood, N.S., which was reported to the department too late for inclusion in the September issue of the LABOUR GAZETTE, while information recently received indicates that the strike of women's clothing factory workers commencing on August 8, 1935, in Montreal, P.Q., recorded as unterminated at the end of August, was settled on August 17. Nine disputes commenced during September. Of these eighteen disputes eight terminated during the month, four being

in favour of the workers involved, two in favour of the employers concerned, while compromise settlements were reached in two cases. At the end of September, therefore, there were on record ten disputes recorded as strikes or lockouts, namely: two disputes of compositors at Calgary, Alta.; compositors, Winnipeg, Man.; furniture factory workers, Toronto, Ont.; longshoremen, Powell River, B.C.; longshoremen, Vancouver, B.C.; water transport workers, Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.; coal miners, Drumheller, Alta.; shoe factory workers, Toronto, Ont.; and moulders, mechanics, etc., Welland, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer; and motion picture projectionists, Winnipeg, Man., September 1, 1935, two employers, this last being added this month.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute involving four employees in two theatres at Winnipeg, Man., has been reported. An agreement with Local 299, Canadian Theatrical Federation, International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, expired on August 31, 1935, and the management refused to continue to employ two operators in each theatre as required by the union rules. Other employees were engaged. The dispute is included in the list of strikes and lockouts where employment conditions are no longer affected but which the unions affected have not declared terminated.

Information has been received as to a dispute involving salmon fishermen at Bute Inlet, B.C., for two days about September 9, 1935, but particulars have not been reported. It appears that higher rates for fish were demanded and that some increases were secured.

A cessation of work in one coal mine at Wayne, Alta., from September 9 to September 14 has been reported but particulars have not been received. It appears that wages due had not been paid and work was resumed when arrangements for payment were made. The five per cent wage increase, made in other mines in the district, had already been agreed to by the employer.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

#### COAL MINERS, PORT HOOD, N.S.

A cessation of work in one coal mine in August was reported to the Department too late for inclusion in the September issue of the LABOUR GAZETTE. The employees ceased work about August 20, as wages had not been paid. The maintenance men later ceased work for some days but returned on the orders of the union under an arrangement for payment of part wages and for supplies of coal. Arrangements having been made to give the other miners part payment of wages pending a final settlement, work was resumed by the end of September.

#### WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), MONTREAL, P.Q.

As stated in the LABOUR GAZETTE for September most of the establishments involved in this dispute reached agreements with the union by August 13. Information has since been received that work was resumed in the remaining establishments a few days later.

#### LONGSHOREMEN, POWELL RIVER, B.C.

The connection of this dispute with that at Vancouver was dealt with in the inquiry by the Royal Commission, noted below. A number of men charged with being members of an unlawful assembly were convicted, with a recommendation for mercy by the jury, and were remanded for sentence.

#### LONGSHOREMEN, VANCOUVER, B.C.

The inquiry into this dispute by a Royal Commissioner, the Honourable Mr. Justice Davis of the Supreme Court of Canada, appointed in accordance with the provisions of the Industrial Disputes Investigation Act, commenced on September 17 and was in progress at the end of the month. In connection with picketing a number of persons were arrested on charges of assault, etc. The trials of those arrested earlier were proceeded with, a number being convicted.

#### COASTAL LONGSHOREMEN, SHIPS' CREWS, SHIP LINERS, BOOM LOG WORKERS, ETC., VAN- COUVER, VICTORIA, NEW WESTMINSTER, CHEMAINUS, ETC., B.C.

Members of the crew of a New Zealand steamer, who refused to handle the vessel for

unloading and left the ship on September 23, were arrested on September 26 on charges of desertion and were remanded for trial. A number of longshoremen at San Francisco refused to unload a ship with British Columbia cargo and were suspended, the federal arbitrator for disputes between the longshoremen's union and the employers having ruled that the men must handle all cargoes offered by the employers.

#### HOP PICKERS, CHILLIWACK DISTRICT, B.C.

A number of employees of two firms ceased work on Saturday, September 21, demanding an increase in piece rates but resumed work on the following Monday, although their demands were not conceded. Four men were arrested on charges of inciting to riot, resisting arrest, and having intoxicants in an Indian dwelling. It is reported that the strikers requested the Minister of Labour for British Columbia to investigate working conditions.

#### COAL MINERS, DRUMHELLER DISTRICT, ALTA.

Employees in three collieries ceased work on September 5, demanding increased wages of five per cent in accordance with the award of a Board of Conciliation and Investigation (LABOUR GAZETTE, September, 1935, pp. 804-818). Five other mining companies had reached agreements with the United Mine Workers of America by the end of August on the basis of the award of the Board, after conferences with representatives of the union in which the western representative of the Department participated. One company affected by the strike accepted the award on September 14 and work was resumed. The two companies remaining accepted the award early in October. A number of other mining operators in the district, not parties to the proceedings under the Industrial Disputes Investigation Act, put into effect the five per cent increase in wages, some of them signing agreements with the United Mine Workers of America.

#### SHOE FACTORY WORKERS, TORONTO, ONT.

Employees in twelve establishments ceased work on September 25 demanding agreements with the Shoe and Leather Workers' Industrial Union which would provide for the forty-four hour week, instead of forty-six and one-half hours as before, basic hourly wages for piece workers at 55 cents for skilled classes, and 40 cents for semi-skilled, with time and one-quarter the regular rates for overtime work. Agreements with various establishments had expired earlier in the year and had not been renewed (LABOUR GAZETTE, April, 1934, page 372). After some days three of the establishments signed agreements with the union but in the other establishments the dispute was untermiated at the end of the month.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**

Employees in about sixty-five establishments ceased work on September 11 demanding compliance with the terms of an agreement between certain associations of clothing manufacturers and the Amalgamated Clothing Workers of America, extended to all establishments in the province under the Quebec Collective Labour Agreements Extension Act by Order in Council (LABOUR GAZETTE, March, 1935, page 230). On September 17 the members of a newly formed association of independent manufacturers agreed to accept the agreement and register with the Joint Committee administering the Act and work was resumed in their establishments. By the end of the month all establishments were reported to have accepted the agreement.

**HAT FACTORY EMPLOYEES, MONTREAL, P.Q.**—Employees in one establishment ceased work on September 19 demanding compliance with the terms of an agreement between the Asso-

ciation of Manufacturers of Millinery and Women's and Children's Headwear and the United Hatters, Cap and Millinery Workers' International Union, which had been extended to all employers in the industry in Montreal by Order in Council under the Quebec Collective Labour Agreements Extension Act (LABOUR GAZETTE, August, 1935, page 732). It is reported that a board of arbitration under the agreement ruled that the employer had violated the terms of the agreement and work was resumed after two days.

**FURNITURE FACTORY WORKERS, HANOVER, ONT.**

A number of the employees in one establishment ceased work on September 10 against the refusal of the management to discuss with a committee of the employees the dismissal of one worker. The strikers demanded an agreement with the Furniture and Wood Workers' Industrial Union, which would provide for classification of workers, wage schedules, equal division of work in slack seasons, preference of employment for union

**STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1935\***

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to September, 1935</b>			
<b>MINING, ETC.—</b>			
Coal miners, Port Hood, N.S...	60	1,600	Commenced Aug. 20, 1935; for payment of wages due; terminated September 30, 1935; compromise.
<b>MANUFACTURING—</b>			
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cloaks and suits), Montreal, P.Q.	40	800	Commenced July 29, 1935, for union wages and working conditions; terminated Sept. 21, 1935; in favour of workers.
Women's clothing factory workers (cloaks and suits), Montreal, P.Q.	.....	.....	Commenced Aug. 8, 1935; for union wages and working conditions; terminated Aug. 17, 1935; in favour of workers.
<i>Printing, Publishing, etc.—</i>			
Compositors, Calgary, Alta...	22	594	Commenced Jan. 10, 1935; against decrease in wages; un-terminated.
Compositors, Winnipeg, Man..	43	1,161	Alleged lockout; commenced April 7, 1935; re employment of members of one union only; un-terminated.
Compositors, Calgary, Alta...	20	540	Alleged lockout; commenced July 8, 1935; re employment of members of one union only; un-terminated.

<i>Water—</i>			
Longshoremen, Powell River, B.C.	65	1,000	Commenced May 17, 1935; for union recognition and union wage scale; un-terminated.
Longshoremen, Vancouver, B.C.	700	10,000	Commenced June 5, 1935; against cancellation of agreement; un-terminated.
Coastal longshoremen, ships' crews, ship liners, boom log workers, etc., Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.	733	10,000	Commenced June 15, 1935; in sympathy with longshoremen on strike at Vancouver from June 5, 1935; un-terminated.

## STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1935\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during September, 1935</b>			
AGRICULTURE— Hop pickers, Chilliwack District, B.C.	1,500	1,500	Commenced Sept. 21, 1935; for increase in piece rates; terminated Sept. 21, 1935; in favour of employer.
MINING, ETC.— Coal miners, Drumheller, Alta.	350	6,900	Commenced Sept. 5, 1935; for increased wages; unternminated.
MANUFACTURING— <i>Boots and Shoes</i> — Shoe factory workers, Toronto, Ont.	400	2,000	Commenced Sept. 25, 1935; for union agreement with reduced hours; unternminated.
<i>Textiles, Clothing, etc.</i> — Men's clothing factory workers, Montreal, P.Q.	900	8,500	Commenced Sept. 11, 1935; for union agreement; terminated September 30, 1935; in favour of workers.
Hat factory workers, Montreal, P.Q.	125	250	Commenced Sept. 19, 1935; against alleged violation of agreement; terminated Sept. 20, 1935; in favour of workers.
<i>Other Wood Products</i> — Furniture factory workers, Hanover, Ont.	100	750	Commenced Sept. 10, 1935; against discharge of worker and for union agreement; terminated Sept. 19, 1935; compromise.
<i>Metal Products</i> — Moulders, mechanics, etc., Welland, Ont.	592	2,368	Commenced Sept. 26, 1935; for hourly increase in wages to offset reduced hours; unternminated.
CONSTRUCTION— <i>Highway</i> — Truck drivers, Pictou County, N.S.	24	72	Commenced Sept. 20, 1935; for increase in piece rates; terminated Sept. 23, 1935; in favour of employer.
SERVICE— <i>Business and Personal</i> — Restaurant workers, Toronto, Ont.	4	16	Commenced Sept. 19, 1935; against discharge of workers and for increased wages; terminated Sept. 24, 1935; in favour of workers.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

members, discussion of grievances with union committees, no dismissal of steady employees except for flagrant misconduct, hourly wage rates instead of piece rates. The employer pointed out that a joint board had been set up to deal with classification of work and with wage rates under the agreement for the furniture manufacturing industry in Ontario, approved by Order in Council under the Industrial Standards Act (LABOUR GAZETTE, August, 1935, page 736). As a result of the mediation of the Mayor of Hanover and a committee of the town council a settlement was reached providing for recognition of a shop committee and for an hourly wage scale instead of piece rates. Work was resumed on September 19.

MOULDERS, MECHANICS, ETC., WELLAND, ONT.  
—A number of the employees in one metal manufacturing establishment ceased work on

September 26, demanding a twenty-five per cent increase in wage rates per hour when hours of labour were reduced from ten per day to eight. The management offered a nine-hour day with a five per cent increase in wages but this was refused. Later an increase in the minimum rate from 30 cents to 35 cents per hour was offered with certain increases for those at higher rates and a nine-hour day, five days per week. The workers demanded a minimum of 37½ cents and ten per cent increase for other classes. At the end of the month the dispute was unternminated but on October 7 a settlement was reached, through the mediation of the Ontario Department of Labour, providing for a minimum rate of 35 cents per hour and graded increases for other classes.

**TRUCK DRIVERS, PICTOU COUNTY, N.S.**—Drivers operating trucks in connection with highway construction ceased work on September 20 demanding an increase in piece rates for hauling gravel and other materials. By September 24 about half of the strikers had returned to work at the rates previously paid, and the others had been replaced.

**RESTAURANT WORKERS, TORONTO, ONT.**—A number of the employees in one restaurant ceased work on September 19 against the dismissal of one worker and demanded increases in wages with a nine-hour day. Work was resumed on September 25 when these demands were conceded.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, in the review of Strikes and Lockouts in Canada and Other Countries, 1934. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in August was 52 and 12 were in effect from the previous month, making a total of 64 disputes in progress during the month involving 24,100 workers with a time loss of 137,000 working days for the month.

Of the 52 disputes beginning in August, 10 were over demands for increases in wages, 5 over proposed wage reductions and 10 over other wage questions, 10 were over questions respecting the employment of particular classes or persons, 10 over other questions of working arrangements and 3 over questions of trade union principle. Four stoppages were due to sympathetic action. During August, settlements were reached in 33 disputes, of which 8 were in favour of workers, 13 in favour of employers, and 12 resulted in compromises. In 10 other disputes, work was resumed pending negotiations.

### France

The number of strikes beginning in 1930 was 1,093, involving 581,927 workers with a time

loss of 7,209,342 working days for the year. For the year 1931, the number of disputes was 261 involving 35,723 workers; for 1932, 330 disputes involving 54,088; and for 1933, 331 disputes with 84,391 workers.

### United States

The number of disputes beginning in July was 156 and 131 were still in effect from the previous month, making a total of 287 disputes in progress during the month, involving 140,000 workers with a time loss of 1,470,000 working days for the month.

The agreement in the bituminous coal mining industry had expired in April, but, at the request of the President of the United States, was extended several times pending negotiations for a new agreement. Negotiations carried on with the assistance of the Assistant Secretary of Labour failed to reach a complete settlement and on September 23, a strike in the industry began. It was reported that 400,000 miners were involved in 26 states. Through the continued conciliation efforts of the Assistant Secretary of Labour, an agreement was reached in most districts, providing for increases in wages of 50 cents per day for day rates, 9 cents per ton for piecework and a 10 per cent increase for yardage and deadwork, and work resumed October 1.

The Farm Credit Administration of the United States announced recently that charters were granted to 74 new Federal Credit unions in August, giving a total of 563 since the passage last year of the act authorizing the organization of these co-operative thrift and loan associations under Federal charters.

Quarterly reports from Federal credit unions which have been organized long enough to report operations showed that 340 of the new organizations already had over 46,000 members as of June 30, 1935. At that time the oldest Federal credit union had been in operation only nine months. Total savings of the 340 organizations as of June 30 amounted to \$717,000 and loans to members since organization, \$776,000.

## REPORT OF ONTARIO DEPARTMENT OF PUBLIC WELFARE

**T**HE administrative activities of the Ontario Department of Public Welfare and Municipal Affairs are dealt with in the fourth annual report, covering the fiscal year ending October 31, 1934. Established in 1930 as a result of the recommendations of the "Ross" Commission on Public Welfare, the department now has jurisdiction over the following: Old Age Pensions, Mothers' Allowances, Children's Aid, Veterans' Welfare, Industrial Schools, Training Schools, Houses of Refuge, and Orphanages.

*Old Age Pensions.*—According to the annual report of the Old Age Pensions Commissioner, "the economic pressure of the last five years has increased the number of old age pensioners far beyond first estimates." The end of the fiscal year (October 31, 1934) found 48,928 persons receiving old age pensions—an increase of 3,699 over the number at the end of the previous year.

The report points out that appeals were made on a variety of grounds, not infrequently on the inability of children to help any longer. These appeals received careful consideration and where justified an increase was granted. Discussing this problem, the chairman of the commission states: "Many pensioners have families of sons and daughters, who, under normal conditions, would be able and willing to maintain or assist in the support of their aged parents, but on account of unemployment or other causes, are unable to do so. Our experience in endeavouring to enforce the Maintenance of Parents' Act has not been at all satisfactory. We have found that in over 90 per cent of cases brought before Magistrates no order was made against the children."

Attention was drawn to the re-organization of the administrative "set-up" of the branch, entailing the abolition of local boards. By the new arrangement applications are forwarded by municipal clerks directly to the Department for consideration.

*Mothers' Allowances.*—The fourteenth annual report of the Mothers' Allowance Commission indicated an increase in the number of applications for allowances. New applications numbered 2,167 and renewals 990. There were 1,221 new applications approved, and 870 renewals were granted allowances, 648 applications being refused by the Commission.

Against this number granted, 1,080 names were removed from the pay lists. Of these, 538 were automatically removed because the qualifying child had reached its 16th birthday, while 542 were removed for other causes.

According to the report, the number of cases under the Incapacitation Clause increases each year as compared with the number of applicants who are widows; 882 widows made application and 893 applicants were wives of men who were pronounced permanently disabled.

The total number of families assisted during the year was 8,144. The number of widows on the pay lists for the year is 4,999 or 61.36 per cent of the total; incapacitation cases 2,341 or 28.75 per cent; desertion cases 587 or 7.23 per cent; foster mother cases 217 or 2.66 per cent.

During the year, 23,173 children received the benefits of mothers' allowances. The average number of children per family receiving allowances was 2.85. Assisted families with one child under sixteen numbered 530; with 2 children under sixteen, 3,778; with three children, 1,890; with four children, 1,025; with five children, 481; with six children, 259; with seven children, 115; with eight children, 50; with nine children, 7; and with ten children, 10.

*Child Welfare.*—Operating under the Department of Public Welfare are a number of agencies directly concerned with various phases of child welfare. Prominent among these is the Children's Aid Society and its branches functioning under the Children's Protection Act.

An innovation in administration was effected during the year, when, as a result of a survey, local societies, while retaining their autonomous character, are graded according to the quality of the work done, the grants being based on the grading. The statistical summary shows that there are 5,833 Protestant wards and 1,369 Catholic wards in the province under the supervision of the Society.

The work of the branch which administers the Children of Unmarried Parents Act consists chiefly of the enforcement of the Act and the collection of payment throughout the province on court orders or agreements and the administration of these funds for the benefit and protection of the child. During the year, 412 new cases were added to the collections as against 420 of last year. The total collections for the year were \$68,248.04 while the disbursements were \$81,889.69. The excess of the disbursement over collections is explained by the fact that a considerable sum, from lump sum settlements, is carried by the public trustee.

Under the Children's Protection Act, 708 children were legally adopted during the year.

There are in operation in the province 46 orphanages and these institutions afforded shelter for 4,915 children.

*Care of Veterans.*—During the year, the welfare of veterans and their dependants, which had formerly been charged to two organizations—Soldiers' Aid Commission and the Veterans' Welfare Bureau—was combined under one organization. This Commission now looks after the entire field of veterans' welfare, i.e.—giving emergency assistance,

administering trust funds, and caring for the wards of the organization. At the end of the fiscal year there were 584 wards under the care of the commission.

*Unemployment Relief.*—The report for this branch shows that at the end of the fiscal year (October, 1934), the total cost of direct relief was \$2,730,564.46; the amounts paid from the Provincial Treasury for the same period was \$1,541,137.72; the percentage of cost borne by the Provincial Treasury was 56.44; the number of persons registered for and in receipt of relief was 355,134 and the per capita cost per month was \$7.39.

## ONTARIO MINIMUM WAGE BOARD

### Order Governing Telephone Systems

THE Minimum Wage Board of Ontario has announced in the Ontario Gazette of September 28, the proposed minimum wage order governing telephone systems in the province.

The Order which becomes effective on November 1, 1935, is as follows:—

No female employee in a telephone system, or in connection with any telephone switchboard or exchange, in the Province of Ontario, shall be paid wages less than those set forth in the following schedules:

#### I. Schedule for population groups—

Population Groups		Experienced Workers Per week	Inexperienced Workers
City of Toronto.....		\$12.50	1st six months, \$10.00 per week; 2nd six months, \$11.00 per week. Thereafter, \$12.50 per week.
Cities of Hamilton, Ottawa, London and Windsor.....		12.00	1st six months, \$10.00 per week; 2nd six months, \$11.00 per week. Thereafter, \$12.00 per week.
Cities, Towns, Villages and Unincorporated Urban Communities, of from 10,000 to 50,000 .....		11.00	1st six months, \$9.00 per week; 2nd six months, \$10.00 per week. Thereafter, \$11.00 per week.
Cities, Towns, Villages and Unincorporated Urban Communities, of from 4,000 to 10,000 .....		10.00	1st six months, \$8.00 per week; 2nd six months, \$9.00 per week. Thereafter, \$10.00 per week.

#### II. Schedule for Small Centres (under 4,000 population and rural districts)—

Number of Lines		Experienced Workers Per week	Inexperienced Workers
Over 300.....		\$9.00	1st six months, \$7.00 per week; 2nd six months, \$8.00 per week. Thereafter, \$9.00 per week.
50 to 300.....		7.00	1st six months, \$5.00 per week; 2nd six months, \$6.00 per week. Thereafter, \$7.00 per week.
Under 50 .....		No	prescribed rates.

(1) *Hourly Rates.*—The above minimum wages shall be paid for a maximum weekly work period of 48 hours. All time in excess of 48 hours must be paid for at an hourly rate not less than the hourly rate based on the prescribed minimum weekly wage for 48 hours. Part-time and occasional workers shall be paid at hourly rates not less than such overtime rates for experienced workers, regardless of length of experience.

(2) *Part-time and Occasional Workers* are those who are employed for busy periods only, as substitutes for regular workers, or in emergencies.

(3) *Night Operators.*—Wages not less than the foregoing weekly rates shall be paid to night operators, regardless of the number of hours on duty per night or per week, where such operators do not commence work before 9 p.m. nor remain on duty after 8 a.m., are provided with suitable sleeping accommodation, and are permitted to sleep during each night's shift. Night operators who are required to be in constant attendance at the switchboard are to be treated as day operators and must be paid at the minimum hourly rates as defined above for every hour they are on duty in excess of the regular weekly period for which the minimum wage must be paid.

(4) *Population* is the population according to the latest decennial census of the Dominion Government.

(5) *Unincorporated Urban Communities* are sub-divided, thickly populated, sections of a township in which the majority of the residents are engaged in pursuits other than agricultural.

(6) *Number of Lines* means the number of active subscriber lines terminating on the switchboard. For the purpose of this order the average number of lines for the past year shall be the number determining the minimum wage rate.

(7) *Experienced Workers* are those who have been employed for one year or more at any time in connection with any switchboard.

(8) *Penalties.*—Any violation of this order is punishable by fine or imprisonment. (See Section 21, Minimum Wage Act.)

*Notice.*—This Order must be posted where it can be easily read by the employees.

## BRITISH COLUMBIA BOARD OF INDUSTRIAL RELATIONS

### Recent Orders Governing Minimum Wages and Hours of Work

**T**HE British Columbia Board of Industrial Relations, administering the Minimum Wages and Hours of Work Acts, has recently issued an order establishing the minimum rates for women in the personal service occupation.

#### ORDER No. 27.—*Establishing a Minimum Wage in the Personal Service Occupation.*

As defined in the order, personal service occupation "includes the work of females employed in manicuring; hairdressing; barbering, massaging; giving of electrical, facial, scalp or other treatments; removal of superfluous hair; chiropody; or other work of like nature."

Subject to certain exemptions, the Board has fixed the minimum rate for experienced employees over eighteen years of age in the personal service occupation at \$14.25 per week of 40 hours or more. For employees working less than 40 hours per week, the minimum rate is 37½ cents per hour, provided that the wages in any one day shall not be less than \$1.50.

The minimum scale for employees under eighteen years of age for a week of 40 hours or more is as follows: \$10 a week during the first six months of such employment; \$11 a week during the second six months; \$12 a week during the third six months; \$13 a week during the fourth six months, or until the employee reaches the age of eighteen (18) years; \$14.25 a week thereafter.

For employees under eighteen years and working less than 40 hours per week the schedule is: 27 cents per hour during first six months of such employment; 29 cents per hour during second six months; 32 cents per hour during the third six months; 35 cents per hour during the fourth six months or until the employee reaches the age of eighteen (18) years; 37½ cents per hour thereafter. In this group, however, it is provided that the wages in any one day shall not be less than one dollar and twenty-five cents (\$1.25).

Inexperienced employees eighteen years or over, working 40 hours a week or more are to be paid the following minimum rates; \$10 a week during the first three months of such employment; \$11 a week during the second three months; \$12 a week during the third three months; \$13 a week during the fourth three months; \$14.25 a week thereafter.

For inexperienced employees eighteen years or over, working less than forty hours per week, the minimum established is: 27 cents

per hour during first three months of such employment; 29 cents per hour during the second three months; 32 cents per hour during the third three months; 35 cents per hour during the fourth three months; 37½ cents per hour thereafter. Provided, however, that the minimum wage in any one day shall not be less than the sum of one dollar and twenty-five cents (\$1.25).

This order becomes effective on September 5, 1935.

#### Male Minimum Wage Act

The Board of Industrial Relations recently gazetted Order No. 28 fixing the amount to be charged for board and lodging at not in excess of \$1.25 per day in the logging industry and the sawmill industry of British Columbia Census Division No. 1 (roughly the south-eastern section of the province).

Prefacing its order the Board explained that it had made an investigation into the price charged employees for board and lodging by employers in the above stated district. In the opinion of the Board, "the price charged by the said employers for board and lodging for their employees is excessive and unduly affects the wages of the said employees."

Accordingly, the Board fixed the rate to be charged for board and lodging at \$1.25 per day as above mentioned.

Board and lodging is defined as "a full day's board of three (3) meals, and living accommodation, including bedding."

This order is to become effective on the 26th day of September, 1935.

#### Hours of Work Act

The Board of Industrial Relations has also issued Regulation No. 24 governing working hours of the occupation of hotel clerk. This order is as follows:—

"The occupation of hotel clerk, which includes the work of all persons engaged as room clerks (day or night), mail clerks, information clerks, cashiers, book-keepers, accountants, telephone operators, and any other persons employed in clerical work in hotels, is hereby added to the Schedule to the said 'Hours of Work Act, 1934,' the approval of the Lieutenant-Governor in Council to such addition to the said Schedule having been obtained by Order in Council dated the 20th day of September, 1935."

## TRADES AND LABOUR CONGRESS OF CANADA

### Summary of Proceedings of the 51st Annual Convention

THE fifty-first annual convention of the Trades and Labour Congress of Canada was held in the Nova Scotian Hotel, Halifax, September 16-20, 1935. The opening ceremonies were presided over by Mr. F. A. Ramsey, president of the Halifax Trades and Labor Council, who welcomed the delegates in behalf of organized labour in Halifax. His Worship Mayor E. J. Cragg then extended the civic welcome to the delegates. In greeting the delegates on behalf of the Provincial Government and the citizens of Nova Scotia, Premier Angus McDonald considered the growth of the labour movement one of the greatest developments of the past fifty years. Reviewing the labour legislation of that period the provincial Premier gave the credit for these measures to such organizations as the Trades and Labour Congress of Canada. Continuing, the speaker stated that one of the functions of a labour organization was to bring to the attention of the public the need of remedial legislation, and the reason the Congress had succeeded was because it was right in its contentions and had public opinion behind it. He concluded with a tribute to the local organizations in Halifax.

Rt. Hon. W. H. Covert, Lieutenant Governor of Nova Scotia, in his felicitous address, emphasized the relationship that should exist between employer and employee, each having respect for the other.

Hon. Michael Dwyer, Minister of Labour of Nova Scotia, who followed, invited the members to lay their problems before the government of the province. It was the opinion of the minister that legislation had to be enacted for the betterment of the working class, and only by such meetings as that of the Congress were governments apprised of the wishes of labour.

Others who briefly addressed the convention were: James Simpson, R. J. Tallon, and P. R. Bengough, vice-presidents of the Congress, Geo. Latham, fraternal delegate from the British Trades Union Congress, and James Maloney, fraternal delegate from the American Federation of Labour.

The chairman then introduced P. M. Draper, acting president of the Congress, who on behalf of the Trades and Labour Congress of Canada thanked the distinguished gentlemen who had addressed the delegates. The speaker referred to the last meeting of the Congress which was held in the Legislative building (1908) and attended by 91 delegates representing 40,000 members, and compared it with the

present meeting at which there were more than 200 delegates representing well over 100,000 members from every province in the Dominion. Mr. Draper expressed his pleasure at hearing the premier give credit to the Trades and Labour Congress of Canada for pioneering in social legislation. This, he declared, was achieved through constitutional and legislative channels, adding that nothing would be done that would be subversive of the laws of Canada.

The speaker pointed out that though the greater portion of the membership is affiliated with the international trade union movement, the Trades and Labour Congress of Canada is a supreme body in this country with status equal to the American Federation of Labor or the British Trades Union Congress.

Referring to the British North America Act, President Draper stated: "For several years the Trades and Labour Congress has advocated that the British North America Act be so altered as to give the Dominion Parliament sole jurisdiction in the passing of laws relating to the social and industrial welfare of Canadian workers. In spite of the advances made in the field of such legislation during the present year, the Constitution remains unchanged in this particular. So long as this condition persists the path along the road of progress in social legislation is beset with difficulties; for even though means are discovered for the enactment of individual measures, those means may not be sufficient in all cases and further progress may be blocked at a time when public opinion would support advances."

The speaker then analyzed the field of federal-provincial jurisdiction relative to the British North America Act.

Continuing, he said: "It is not necessary to seek to invade all matters of provincial jurisdiction in order to secure competency for the Dominion Parliament to deal with general matters touching relations between employers and employees, as well as certain broad questions of social security. Old age pensions legislation was an effort to reconcile Dominion-wide need with a conservation of provincial jurisdiction, but after eight years of effort, the old age pension is not yet general, rather clearly demonstrating the serious difficulties in the way of this method of approach to legal solution of social problems. Resort to Dominion legislation on the subject matter of International Treaties paves the way for several of the federal laws on social and industrial ques-

tions which were sanctioned this year, but even that device has its limitations. Already rumblings are heard that the constitutionality of the Eight Hour Day Bill is to be challenged; resulting litigation and uncertainty are not in the interest of progress. In any event the Federal Parliament was restricted to the terms of International Conventions, with the result that the details of some of the measures could be considered only as a beginning on that account.

"This Congress has never advocated that the rights and interests of any province, which are held as sacred for the cultural development of its people, should be interfered with, but where modern conditions require that the workers in all provinces be protected by uniform measures in order that some may not be penalized by the competition of others operating under less advanced laws, the necessity for uniform legislation is clearly indicated. Only through the medium of amendments to the British North America Act can such a condition be brought about in proper measure."

The president next dealt with the problem of unemployed Canadian youth. On this subject he declared: "No question within the competence of this Congress is of more vital importance than that of the unemployment of young persons.

"When you consider that about half a million young men in Canada have reached the age of 25 years without beginning to earn their own livelihood, and even though it is not immediately possible to provide industrial or other work for them, it is essential that measures be taken to prevent their demoralization. What is required is the establishment of vocational guidance services, the further development of technical education, the provision of recreational centres, the effective administration of employment exchanges, and above all new industries, which mean work—and work means life, renewed self confidence, a sense of service to the community, the courage to look forward, a new aim and meaning in existence.

"The chief thing, obviously, is to save these young people from the belief that society has no further use for them and from developing a feeling which will sooner or later result in mental misery and moral degradation. There is an immense constructive task here for social thinkers, community workers, and especially governments."

The president concluded by a reference to the threat of war. In this respect he stated that Canadians are firm supporters of the League of Nations.

After the convention was declared open, the various committees were appointed. A preliminary report of the credential committee

was presented, the final report, which was subsequently read, showed the following delegates present: Fraternal delegates, 2, one representing the British Trades Union Congress and the other the American Federation of Labor; provincial federations, 2; trades and labour councils, 27; 96 local unions represented by 141 delegates, making a total of 215.

### Report of Executive Council

Prefacing this report is a reference to the last meeting of the Congress in Halifax, which was twenty-seven years ago, and to the progress along constitutional lines that had been made during that period. The officers expressed pride in the record of the accomplishments of the Congress, and stated that "the laws placed on the statute books of the Federal Parliament and the respective Provincial Legislatures bear ample proof as to the success of its efforts."

Attention was drawn to the volume of social and economic legislation dealt with by the Federal Parliament, but the report intimated that "the extent to which this, and all similar legislation, is of benefit, will, however, depend upon the vigilance exercised by the trade union movement."

Reference was made to the legislative program prepared and submitted to the Dominion Government (LABOUR GAZETTE, February, 1935, page 154).

The report reviewed the various bills and resolutions introduced in the sixth session of the seventeenth Parliament of Canada which were of most direct interest to labour. These were enumerated as follows: Unemployment and Unemployment Relief; National Housing Policy; Eight Hour Day; Fair Wage Act; One Day's Rest in Seven; Minimum Wage Fixing Machinery; Ratification of I.L.O. Draft Conventions; Amending the British North America Act; Price Spreads Commission Report; Dominion Trade and Industry Commission; Combines Investigation Act; Criminal Code Amendments; Companies Act; Industrial Disputes Investigation Act; National Economic Council; National Products Marketing Act; Co-operative Societies' Legislation; Radio Broadcasting Commission; Pensions for the Blind; Remembrance Day; Canada and War; Taxation and Finance Matters; Railways and Shipping; National Health Policy; Election Act; Highway Traffic; Newspaper Ownership and Immigration.

Among other subjects dealt with in the executive report were: Relations with national and international bodies; International Federation of Trade Unions; International Labour Organization; National research council; Dominion council of health; national construction council; League of Nations Society in

Canada; Canadian Welfare Council; National Unity; Canadian Congress journal; Consumers' representation on marketing board; Union label; Change in presidency, and Amendments to constitution.

A review of provincial legislation as affecting labour was also presented in the executive report, as well as the reports of the fraternal delegates to the British Trades Union Congress and the American Federation of Labor.

### Felicitations Received

Among the telegrams read were the following addressed to President Draper from Hon. W. A. Gordon, Minister of Labour, and Mr. W. M. Dickson, deputy minister:—

"Regret exceedingly that engagements made some time ago in Northern Ontario and which cannot be broken make it impossible for me to accept the kind invitation of your executive to attend this your fifty-first convention and I am therefore forced to forego the pleasure of being with you and taking part in your deliberations this year as last. I most sincerely hope that your convention will as usual be a most successful one and that your deliberations will result in great benefit not only to your organization but also to the people of Canada generally."

W. A. GORDON,  
*Minister of Labour.*

"Would greatly appreciate your conveying to the officers and delegates now in attendance at Halifax my sincere congratulations on this their fifty-first convention. Please express also my sincere good wishes for a very harmonious and successful convention and accept my assurance of the hearty continued co-operation of this Department and its officers in all matters affecting the interests of labour and this country."

W. M. DICKSON,  
*Deputy Minister of Labour*

### Secretary-Treasurer's Report

According to the report of the secretary-treasurer, the total receipts for the year, including balance brought forward, were \$26,040.35, expenditures totalled \$21,531.35, leaving a balance on hand of \$4,509. The report also showed a membership of 105,998 on which per capita had been received. In this connection the secretary-treasurer made the following statement: "In normal times approximately 25 per cent should be added to the reported membership to include those who, while still actual members of affiliated organizations, are relieved because of unemployment and other causes from paying their regular contributions and as a result of this no per capita tax is remitted to the Congress on these members."

The report of this committee verified the financial statement as submitted by the secretary-treasurer.

Mr. James F. Marsh, Deputy Minister of Labour of Ontario, a credentialed delegate to the Congress, in his address explained in detail the working of the Industrial Standards Act, now in operation in the province of Ontario.

### Fraternal Delegates Addresses

Introduced by the president, Mr. James Maloney, president of the Glass Bottle Blowers' Association, in conveying the fraternal greetings of the American Federation of Labor, sketched the history of the National Industrial Recovery Act and outlined the many beneficial features which it contained. In the opinion of the speaker, if the N.R.A. had been permitted to continue to function a great deal of good would have resulted but when a test case was brought before the United States Supreme Court that body declared the Act unconstitutional.

The N.R.A. as viewed by Mr. Maloney had two chief features, viz: (1) A minimum wage rate for the unskilled man, and (2) a maximum hourly work week. He contended that the only way to correct present conditions is to have government control of industry, a reduction in the hours of labour and increase the wages.

Mr. George Latham, fraternal delegate from the British Trades Union Congress, referred to the growth of the organization he represented, which was approximately 100,000 members during the past year. He mentioned that the doctors had formed an organization which was affiliated with the B.T.U.C. The delegates were informed that the objective of the labour movement in the British Isles was national control of the financial system. Reference was made to the restoration of wage cuts, which in some instances had been wiped out completely.

### Report of Committee on Officers' Reports

This committee made favourable comment on the successful efforts of the labour movement, as represented by the Trades and Labour Congress, in securing new legislation, both Federal and Provincial, in the interest of the workers. Each of the main subjects dealt with in the executive report was briefly summarized, and the favourable recommendation of the committee on the whole report was adopted by the delegates.

### Report of Legislative Committee

The practice of the executive council in submitting their legislative program to a conference of national and international representatives for final ratification prior to presenting it to the Dominion Government, also the

method of distributing same to the membership through the medium of the columns of the *Canadian Congress Journal* for general information was approved by the committee.

The committee commended the emphasis on unemployment by representatives of the Congress in presenting their program before the Federal Government, though regret was expressed that this program had not received the attention it deserved. In reporting on provincial legislation, the committee considered that the achievements of the provincial executives and provincial federations have been all that could be obtained under present conditions.

Following the presentation of this report, Mr. Horace A. Riviere, vice-president of the United Textile Workers of America, spoke on the desirability of organizing the textile industry in Canada.

#### **Addresses of Mr. Tom Moore and Mr. W. M. Dickson, Deputy Minister of Labour**

Mr. Moore, former president, expressed his thanks for the reception received and conveyed the hearty greetings of the Employment and Social Insurance Commission. A detailed analysis of the various functions of the committee was presented to the delegates. Reference was made to the establishment of a national system of unemployment exchanges, the Employment Service of Canada being the basis from which the scheme will operate.

It was intimated that a national chain of offices would be established but care would be exercised in the creating of these offices in order that money would not be wasted in setting up more than sufficient to take care of the needs.

Mr. W. M. Dickson, Deputy Minister of Labour, expressed his pleasure in being able to be present at the convention and to convey to the delegates the greetings of the Federal Department of Labour. He welcomed the opportunity of meeting the delegates. The Deputy Minister informed those present that the Department of Labour took a keen interest in all problems affecting labour, as he stated "labour problems were government problems," and that it was willing to co-operate with labour in finding a solution of these problems. Reference was made to the changes in industrial development. Science and man's inventive genius had robbed labour of much of its drudgery and had brought the worker increased ease, comfort and abundance of goods. Had it, however, resulted in real comfort? There can be no real comfort without ease of mind and there can be no ease of mind without security of position. This security was challenged by three main factors.

Science has increased man's productive ability with improved machinery.

Medical science has increased the number of workers by decreasing infant and adult mortality. It has increased the workers' capacity for work by decreasing his periods of enforced idleness through sickness. It has increased his span of life and the period of enforced inactivity at the end of his life for which he must make provision during the period of his earning capacity. Hence he is faced with two menaces to his security, namely, an ever-increasing supply of labour with a decreasing supply of employment opportunities.

There is a third menace to his security and that is competition which is steadily growing more acute from nations who enjoy a lower standard of living but whose industries are as highly mechanized as they are in this country. Japan was cited as an illustration of this increased productivity through mechanization in industry and low costs of production owing to very low wages and the simplest conditions of living.

Reference was also made to the volume of labour legislation enacted by the Federal Parliament and Provincial Legislatures and the fact that 50 years ago labour had little voice in the enactment of or administration of legislation. To-day it has much.

Mr. Dickson affirmed that unions had a steadying affect on the workers and a direct influence on those interested in the right of association and collective bargaining.

The attention of the delegates was directed to the attitude of the Government in regard to wage cuts, stating that as far as possible it had tried to avoid cuts in federal building. The policy followed was to set a fair and reasonable rate and those that were not were discarded.

The conciliation service of the Department of Labour was referred to and a greater degree of support and assistance on the part of the provinces was urged. In this connection appreciation was expressed for the co-operation of the Congress in the past and it was hoped that such co-operation would be continued.

The Deputy Minister concluded his address with again assuring the delegates that the department will give all co-operation possible to the problems of labour.

#### **Resolutions**

Among the recommendations contained in resolutions adopted were:—

Superannuation for members of the National Association of Marine Engineers of Canada who are employees of the Federal Government.

Prohibition of those in receipt of superannuation benefits or pensions from accepting

further employment in competition with other workers, except soldiers or disabled persons who have been injured at war or industry and such persons over the age limit who because of their special knowledge and service make themselves of outstanding value to humanitarian organizations whose objectives and principles aim to social or economic betterment of the workers.

Establishment of a system of national control of the banking system of the Dominion.

Payment of dividends only on actual capital employed and the prevention of inflation and over-capitalization of stock.

Maintenance of an accurate record in an approved type of annual ledger by all business houses and banking institutions.

Amendments to the Workmen's Compensation Act of the province of Quebec, and the appointing of a labour representative to the Compensation Board.

Extending of the scope of the Quebec Workmen's Compensation Act to cover all establishments where food is served, and that minor accidents, sickness and industrial diseases be covered by the Act.

Payment of injured workmen under the Ontario Workmen's Compensation on the basis of 66½ per cent of wages until fit to resume his usual occupation or until such time as the worker has secured equally remunerative employment.

Allowance for meals and lodging in addition to compensation for injuries under the Quebec Workmen's Compensation Act.

A fair wage scale of wages for employees of lumbering firms cutting timber on crown lands.

Extension of the right of organization to lumber and sawmill workers in unions of their choice and that companies be compelled to recognize representatives chosen by the workers.

Enactment of social legislation by the various provincial governments.

Recording appreciation of the move towards adequate social insurance and urging the enactment of a scheme to take care of widows; old age pensions at 60; health insurance, and unemployment insurance.

Inclusion of all classes of lumbermen under the scope of the Unemployment Insurance Act.

Retiring men at 60 years of age on a pension sufficient to maintain a decent standard of living and the pensioning of civil servants at 60 years of age.

Continuance of efforts to obtain enactment of old age pension legislation in the province of Quebec.

Making the national housing plan and slum elimination scheme operative to give the different provinces an opportunity to come within the scope of the plan as soon as possible.

Immediate reforestation.

Amendment to the Canadian Copyright Act to make it read as follows:—

"Any printed article requiring Canadian copyright must be printed from type set within the borders of the Dominion of Canada or from plates made from type set within the confines of the Dominion of Canada."

Setting up of establishments provided with all the equipment necessary to enable those who have started to learn a trade to complete their apprenticeship and that young people who have left school during the last few years

should be instructed according to their ability in some trade or industry.

Instituting a survey of the best method of transporting workmen to and from places where employment has been secured for them through recognized employment offices.

Abolition of concentration camps for young men and the adoption of practical work schemes at fair rates of pay and standard working conditions.

That municipalities financing public works with capital make such work available to all citizens, with preferential treatment to be given to those who had previously made municipal work their permanent occupation.

Employment exclusively of persons domiciled in Canada and having Canadian citizenship on ships engaged in Canadian coast-wise trade which are subsidized or operated by the Government of Canada.

Centralized authority, and federal control, of the administration and responsibility of maintenance of the unemployed.

Immediate and complete investigation into the disturbances in Regina on July 1.

Stricter enforcement of the 40-hour week legislation in the province of Quebec.

Six-hour day and a five-day week in all industries with at least a corresponding increase in pay to equalize any loss that might accrue by the lessening of the hours of employment.

Eight-hour day and the three-platoon system throughout Canada for all fire fighters.

Reduction of hours of work with increased purchasing power in all minimum wage regulations.

At least one day's rest of twenty-four consecutive hours each week for all persons employed in places of amusement, hotels, and restaurants operating seven days a week.

Co-operation of affiliated membership in adjusting existing difficulties in having the five-day week adopted in composing rooms of newspapers of Canada.

Continued efforts towards the abolition of Section 98 of the Criminal Code.

Precedence of workers' claims in bankruptcy cases.

Reducing the hazards of railway highway grade crossings.

Adoption of legislation for the protection of the people from fire hazards in all buildings and ships.

Appointment of a competent inspector of gears, tackles and working ways used in connection with loading and unloading ships at the port of Halifax.

Supervision and inspection of all marine warehouses and piers, wharves and landings.

Enforcement of regulations governing the installation and operation of passenger and freight elevators.

Enactment by the various provinces of adequate legislation governing the erection, operation and supervision of all hoisting machinery used in building operations.

More stringent enforcement of existing laws relating to the use of poisonous materials in industry.

Prohibition of sale of cheap imported glasses and all imported lenses to the public, and that only qualified optometrists and opticians be allowed to carry on the business of selling eyeglasses.

Employment of one projectionist for each machine at all times while pictures are being exhibited to the general public.

Compulsory barbers' licence law for the province of Ontario, the licences to be issued by the Government.

Securing amendments to the Stationary Enginemen's Act of the province of Quebec.

Appointment of a boiler inspector for the province of Nova Scotia.

Formation of a national body for the purpose of prescribing standards for mental hospitals and professional staffs, and the issuing of certificates in mental nursing which would be recognized throughout Canada.

Compulsory insurance for all drivers and owners of automobiles in the province of Quebec against accident to other people, and that the examination of chauffeurs be made more severe.

Securing of a fair regulation of motor vehicle transportation under the control of the Board of Railway Commissioners or a similar authority.

Condemning tendencies on the part of authorities to curtail the liberty of the workers in their attempt to improve their standard of living.

Printing of liquor advertising in the province of Ontario as they pertain to periodicals, pamphlets, folders, and signs.

Labour representation on the Ontario Liquor Control Board.

Standardization of all containers as to weight and measure.

Amendments to Unfair Competition Act of 1932, so as to include shop cards and the emblem of service trades.

In addition to the above the following resolution was adopted:—

"That the affiliated membership of the Trades and Labour Congress of Canada refrain from purchasing German-made goods, or from using raw materials from Germany in the process of production and that the Congress use its influence against participation of sportsmen of Canada in the Olympic games, until such time as the workers of Germany are free; and further that the Congress instruct its officers to make representations to the Federal Government asking it to use its influence upon the Hitler Government to stop the persecution of the workers and break off diplomatic and commercial relations with the Hitler Government should these deplorable conditions continue."

In substitution of a resolution on war and peace, introduced by J. W. Bruce, representing the United Association of Plumbers and Steamfitters, the Committee on Resolutions recommended the following which was adopted by the convention: "That this Congress pledge itself to the principle of world peace and urge the Government of Canada to use every effort through the instrumentality of the League of Nations to prevent the outbreak of war, and

further be it resolved that this Congress go on record approving of the stand taken by the International Federation of Trade Unions in the interest of world peace and notify them of our action."

The unanimous endorsement of the delegates was given to a resolution extending congratulations to past president Tom Moore on his assumption of his new duties as a member on the Employment and Social Insurance Commission.

### Election of Officers

The election of officers resulted as follows:—  
President, P. M. Draper, Ottawa.

Vice-presidents, P. R. Bengough, Vancouver; James Simpson, Toronto; D. W. Morrison, Glace Bay.

Secretary-treasurer, R. J. Tallon, Montreal.

Provincial Executive Committee: Nova Scotia—W. A. MacDonald (chairman), Halifax; A. M. Sullivan, Halifax; F. C. Craig, Halifax; A. A. McKay, Glace Bay. Quebec—J. R. Brunet (chairman), Montreal; P. Lefebvre, Montreal; Omer Fleury, Quebec; V. E. Trotter, Montreal. Ontario—E. Walker (chairman), London; Rod Plant, Ottawa; W. Russell, Toronto; George Cowan, Toronto. Manitoba—H. Kempster (chairman), Winnipeg; W. B. Lowe, Winnipeg; W. J. Nelson, Winnipeg, (the Trades and Labour Council of Winnipeg to recommend the fourth member). Saskatchewan—A. M. Eddy (chairman), Saskatoon; A. Tait, Moose Jaw; H. D. Davis, Prince Albert, (the fourth member of the committee to be appointed by the Regina Trades and Labour Council). British Columbia—C. E. Herrett (chairman), Vancouver; A. H. MacIsaac, Spences Bridge (the other two officers on the executive to be named by the Prince Rupert Trades and Labour Council and the Victoria Trades and Labour Council respectively). The provinces of Alberta and New Brunswick having provincial federations chartered by the Congress, the executive officers carry on the legislative work for these provinces.

Fraternal delegate to the American Federation of Labor, J. A. P. Haydon, M.C., secretary of the Ottawa and District Printing Trades Federation.

Fraternal delegate to the British Trades Union Congress, Fred. Molineaux, organizer, Brotherhood of Painters, Decorators and Paperhangers of America.

Montreal was selected as the convention city for 1936.

## FEDERATION OF CATHOLIC WORKERS OF CANADA

### Summary of Proceedings of the 14th Annual Convention

THE fourteenth annual convention of the Federation of Catholic Workers of Canada was held on September 15-17, 1935, in Hull, Quebec, the city in which the Federation came into being in 1921. At that time the membership numbered about 10,000 but according to figures presented by the general secretary the membership has increased to nearly 38,000. During the past year, 34 new organizations affiliated with the Federation, while two former affiliated bodies were reinstated, the total affiliations numbering 134, comprising 4 federations, 1 general council, 7 central councils, 6 trades councils, 10 study clubs and 106 individual unions.

The formation of one new federation, the Federation of Barbers and Hairdressers of the Province of Quebec, as well as many women's unions, was reported to the convention.

At the request of the central council of Montreal, the executive council set forth definitions applicable to labour unions and spheres of occupation.

The special committee appointed to study the report of the Price Spreads Commission endorsed the recommendations contained therein and urged that the executive make a more complete analysis of the volume. The main labour recommendations of the Price Spreads Commission were then detailed by the committee for the benefit of the delegates. As these have been reviewed in the *LABOUR GAZETTE* for May (pages 407-410) they are not reproduced here.

Representatives of Joint Councils brought in the following recommendations:

Opposing of separate agreements in all the provincial competitive industries.

Abolition of exemptions by the Provincial Department of Labour, that all requests for such exemptions be referred to the joint council concerned.

Encouragement by the government of regular meetings of joint council secretaries.

The recommendations as contained in the adopted resolutions were as follows:

A proportional increase in salary in all cases where hours of work are reduced.

Enforcement of the 40-hour week in the printing trades and in all other industries where it can possibly be done.

Compulsory arbitration when employers and employees fail to agree on the conditions of a collective agreement.

Amendment to the Collective Labour Agreements Extension Act so that qualification certificates be granted only by those

employees' associations recognized by the joint committee.

Establishment of apprenticeship regulations by the Provincial Department of Labour.

Establishing the 40-hour week with an 8-hour day.

Enforcement of the 40-hour week.

Compulsory apprenticeship certificate for any apprentice in the employ of a building contractor, such certificates to be under the control of the bureau of examiners.

Compulsory licences for all building contractors, the cost of such licences to be set by the joint committee.

Use of blue nails.

Extension of the same powers to joint committees' inspectors as given to provincial inspectors.

Prohibition of spray painting except in shops where special apparatus has been installed.

Establishment of a provincial economic council and a superior council of labour.

Amendment to the Collective Agreements Extension Act to provide a fine in case of violation of established agreements.

Extension of the Collective Agreements Extension Act to cover office workers in industry and trade.

Uniform rates of wages in the construction trades for the whole province of Quebec.

Establishment of a labour court by the provincial government.

The Restriction of the employment of women to a reasonable proportion.

Appointment of a woman on the Women's Minimum Wages Board.

Ascertainment by inspectors if the rate paid for piece work is sufficient to provide the hourly rate fixed by the Board.

Immediate revision of orders which still provide for the payment of wages to 80 per cent of the staff employed.

Extending the scope of the Women's Minimum Wages Board to cover all work done by women.

That the injured worker have the right to select the attending doctor.

Giving effect to the recommendation of the International Labour Conference forbidding work in bakery shops between 7 p.m. and 4 a.m.

Appointing of a committee to revise the rules and regulations of the Federation of Catholic Workers of Canada.

That the financial year of the Federation be from August 1 to July 31 and that September be fixed as the convention month.

Adoption of the Dominion Old Age Pensions Scheme by the Quebec Provincial Government.

That in provincial public works contract tenders be accepted only from contractors having a signed collective agreement with a labour organization duly registered under the Trade Unions Act of 1925.

### Election of Officers

The officers elected were: President, Alfred Charpentier, Montreal, Que.; 1st vice-president, Henri Quevillon, Hull, Que.; 2nd vice-president, Emilé Tellier, Three Rivers, Que.; Secretary-treasurer, Gérard Picard, Quebec, Que.

## TRADES UNION CONGRESS OF GREAT BRITAIN

THE sixty-seventh annual Trades Union Congress was held at Margate on September 2-6, Mr. W. Kean, chairman of the General Council, presiding. In attendance were 575 delegates representing 168 affiliated organizations and approximately 3,389,000 members. The figures of total trade union membership represented at the Congress showed an increase of 94,000 (nearly three per cent) on those of the previous Congress. All industrial groups indicated a membership increase except textiles in which there was a decline of about four per cent.

In his opening address, President Kean reviewed the international situation, and in particular the threat of hostilities between Italy and Abyssinia. He pleaded for a strong lead from the Congress to the League of Nations Council, which was meeting that week, in an affirmation of belief in the League of Nations as an instrument of peace and in the sanctity of pledges made to the League by its signatory nations. If Italy broke those pledges, Mr. Kean said, the League should apply economic and financial sanctions against her, and coerce her, if necessary, to keep the peace.

In the sphere of domestic affairs, the president pointed to encouraging signs in the increase in trade union membership, in recent improvements of wage rates, and in the progress made towards securing a shorter working week. He referred to the convention adopted by the International Labour Conference dealing with the 40-hour week, and expressed the hope that the International Labour Office would use the interval before the Conference of 1936 to study the requirements of particular industries, in collaboration with the organized workers of this and other countries. Economic planning, although not applied as trade unionists would wish, had also gained recognition from existing Governments and employers' organizations and was making some progress. In his concluding remarks, Mr. Kean pointed to the advantages of a closer union between the National Council of Labour and the Co-operative Movement.

Proceeding to the General Council's report and the resolutions submitted, the Congress

supported the newly admitted Medical Practitioners' Union "for a public enquiry into the evil results of systems of work measurement." Another adopted resolution dealt with wage standards in industry with special reference to the employment of women. A resolution was also passed urging that only trade union labour should be employed by co-operative societies and their contractors.

Considerable discussion was focussed on two circulars issued by the General Council to trade unions and to trades councils, respectively. The circular to trade unions recommended action which would debar Fascists and Communists from holding office in their organizations; while the circular to trades councils ruled that any councils which admitted delegates associated with Communist or Fascist organizations should cease to be recognized by the Congress. After a vigorous defence of the General Council's action by Mr. E. Bevin, motions censuring the Council and calling for the withdrawal of the circular to trade unions were defeated, on a card vote.

On the second day of the Congress, a resolution was passed which criticized the Government's policy towards unemployment, called for fresh measures, including "the public ownership and control of the great basic industries and services," and condemned certain features of the Unemployment Insurance and Unemployment Assistance Acts. Other resolutions included one which urged that unemployment insurance should be extended to agricultural labourers, and another that all workers should be brought within the scope, regardless of income; the latter also asked for a modification of the trade dispute disqualification for the receipt of unemployment benefit.

Discussions on the third day centred largely round the Council's report on international trade union unity and the decision of the International Federation of Trade Unions against unity of action with the Red International of Labour Unions. A resolution against the decision of the International Federation and in favour of a "united front" between the two organizations in order to combat war and Fascism was eventually defeated

by a large majority, following a speech by the General Secretary, Sir Walter Citrine, who defended the action of the International Federation.

A resolution was carried unanimously which dealt with the displacement of adult workers by juveniles, and proposed raising the school-leaving age to 15, "and as speedily as possible to 16"; and pensions of at least £1 a week at 60 years of age, in order to induce workers to retire earlier. Another resolution pressed for a reduction of working hours to 40 per week without a reduction in weekly wages, and for a drastic restriction of overtime; it further called for the adoption of a 40-hour week in all Government establishments.

The mining industry figured largely in the resolutions of the fourth day. These included the pledging of the Congress' assistance to raise the standard of mine workers' wages, and approval of state employment and payment of colliery firemen, examiners and deputies.

In regard to the situation between Italy and Abyssinia the support of the Congress was pledged "to any action consistent with the treaties and statutes of the League" (of Nations) to restrain Italy from attacking Abyssinia. The resolution and declaration were passed by a large majority.

Two important reports of the General Council came up for consideration on the fifth and

last day of the Congress, one dealing with plans for the socialization of the cotton industry, and the other condemning "Fascism," with particular reference to conditions in Germany, Italy, and Austria. Both reports were approved. Mr. Lansbury, in bringing the fraternal greetings of the Labour Party, said, with reference to the pledge given to the coal miners, that he was hopeful that any question of a strike might be avoided by Parliamentary action.

Among the resolutions passed this day was one calling for an enquiry by the General Council into the conditions of workers in industries supervised by Marketing Boards, and demanding that trade unions and consumers should be represented on such Boards; others called for the repeal of the Trade Disputes and Trade Unions Act, 1927, and the Incitement to Disaffection Act; for the amendment of the Fair Wages Clause to ensure that public work should be done by trade union labour, under trade union conditions; and for a limitation of the working hours of distributive workers and of hospital employees, respectively. A resolution that in all socialized industries there should be negotiating bodies, which should take the form of the existing Whitley Councils, was referred to the General Council for consideration.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF SEPTEMBER, 1935

### Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of September was reported by the superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busy with fall ploughing and other seasonal work. Logging was quiet, although dressed lumber was being shipped in fair quantities to foreign destinations. Sawmills expected to operate until late in October. Fishing was only fair in Nova Scotia, but better catches were reported from New Brunswick waters, oyster fishermen being particularly busy along the Shediac and Kent County shores. Mines in the New Glasgow area operated from two to six days per week, while the majority of those in Cape Breton and vicinity worked from two to four days. Manufacturers, at Halifax, stated that although there was no additional volume in business, production was up to the average, while at New Glasgow some companies had increased their staffs. No idleness was reported in the iron and steel group and manufacturers of confec-

tionery and foodstuffs were busy. Building construction showed little change and relief work continued on highways and sewers. Transportation was good, but somewhat less than during the past three months. Trade also was quiet. A fair demand existed for domestics and charworkers in the Women's Division.

A marked decrease in farm orders was noted in the Province of Quebec, but lumbering operations were active and a number of bushmen had been sent out to camps. Mining was quiet. Lessened activity was reported in manufacturing at Hull and Sherbrooke. In Quebec City, improvement was noted and Three Rivers showed little change. In Montreal, the tobacco and rubber industries were not so busy, while the clothing trades were more so, with conditions in the iron and steel group noted as satisfactory. Building construction was very quiet, no progress in this line being made in Montreal, although the city continued to take care of many men on miscellaneous work. High-

way and civic improvements also afforded employment for a number. Transportation was active at Quebec, but quiet at Three Rivers. Trade showed little change, Montreal reported both wholesale and retail trade good. Many placements of domestic workers, both in hotels and private homes, were recorded by the Women's Division.

The demand for farm hands in Ontario was gradually decreasing, although there was a steady call for winter choremen and experienced milkers. In the Niagara district harvest work and picking and packing of fruit had provided considerable employment. Logging was fairly active, but mining was quiet, except in some of the larger mines at Sault Ste. Marie, Sudbury and Timmins. Manufacturing concerns were busy. In most centres the trend of business was upward, although in a few lines layoffs had resulted, owing to wage disputes or seasonal slackness. Building construction consisted, for the most part, of repairs and alterations, with all jobs previously reported, progressing according to schedule. Few new large projects were in evidence. Highway and other relief work continued. A shortage of experienced domestics was reported, as usual, from the Women's Division, it being almost impossible to find suitable applicants, at the wages offered, for some of the positions. Openings for factory help had been more plentiful, but with the close of the fruit and vegetable canning season, these workers would again be released.

A further reduction was noted in the number of orders listed for farm help in the Prairie Provinces as harvesting was nearly over, the calls on record being chiefly confined to men on a monthly basis, at wages ranging from \$15 to \$20 per month. At Lethbridge, the sugar beet harvest was underway and this would provide employment for many men for several weeks. However, approximately 90 per cent of the labour required had been arranged on contract basis, so no shortage of workers was expected. Logging was fairly busy and a number of tie makers had been sent to camps in the Kenora district. Mining was quiet. Manufacturing was unchanged, with no demand for additional workers. Little new work was reported in building construction, but highways and other relief projects continued. Trade was fair. There was a nominal decline in activity in the Women's Section, fewer orders being received, also fewer applications for employment.

With harvesting completed in British Columbia, orders for farm hands were not so plentiful. More help, however, was employed

in the orchard and packing houses, many canneries working double shifts to cope with the large stock already on hand. A number of fruit pickers, however, awaited employment. Logging camps temporarily closed down, owing to dry weather, had almost all resumed operations and many were running full time, as weather conditions were more favourable and the market fairly steady. Saw and shingle mills were working well, although the latter reported a falling off in orders, with the likelihood of short time in the near future. Mining was brisk, with no shortage of labour. Salmon fishing had commenced, which would provide employment for a number of workers. Manufacturing was unchanged. Building construction showed some improvement and National Defence camps were still in operation. Strike conditions continued on the waterfront at New Westminster and Vancouver and the shipyards at Victoria were quiet. Trade was fair. In the Women's Department, many calls were reported for domestics, but no activity was registered in other lines.

---

There were 5,092 accidents reported to The Workmen's Compensation Board of Ontario during the month of September, as compared with 4,955 during August, and 4,695 during September a year ago. The fatal cases numbered 20, as against 26 in August, and 18 last September. The total benefits awarded amounted to \$351,613.93, of which \$278,918.43 was for compensation and \$72,695.50 for medical aid. This year's record to date shows a total of 42,956 accidents reported, as compared with 40,327 during the same period last year, and total benefits of \$3,944,044.24, as against \$3,246,006.04 to the end of September, 1934.

---

Regulations governing the operation and inspection of quartz mines, quarries, and oil and gas well drilling plants in Saskatchewan have recently been approved by Order in Council. The regulations deal with employment in and about mines; responsibility of manager, superintendents or lesser officers; ventilation; sanitation; care and use of explosives; fire protection; escapement shafts; mine rescue stations; ladderways, handling water; shaft equipment and operation; haulage; signals; protection from machinery, steam boilers and pressure vessels; accidents; prevention of dust; metallurgical works; use of electricity; damage to property; special rules to meet requirements of individual mines, quarries, and operation and maintenance of oil and gas well drilling plants and rigs.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN AUGUST, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on September 1 was 9,355, the employees on their payrolls numbering 964,647 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for August was 1,727 having an aggregate membership of 166,636 persons, 14·2 per

cent of whom were without employment on September 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of September, 1935 as Reported by Employers

The firms furnishing monthly returns on employment to the Dominion Bureau of Statistics reported at the beginning of September further substantial improvement in the situation, the upward movement extending to all five economic areas and to most of the industrial groups. Statements were received from 9,355 employers with an aggregate payroll of 964,647 persons, or 15,062 more than on August 1. Reflecting this gain, the crude index (average 1926=100) rose from 101·1 in the preceding month to 102·7 on September 1, as compared with 98·8 on the same date in 1934. Recessions in industrial activity have been shown at the beginning of September in eight of the preceding fourteen years for which statistics are available, there being, on the average, a slight decline on this date. The advance on September 1, 1935, is therefore especially interesting, resulting in an increase of nearly two points in the seasonally adjusted index, which stood at 98·5 at the latest date, as compared with 96·8 on August 1.

The following shows the unadjusted indexes for September 1 in the fifteen years of the record:—1935, 102·7; 1934, 98·8; 1933, 88·5; 1932, 86·0; 1931, 107·1; 1930, 116·6; 1929, 126·8; 1928, 119·1; 1927, 111·0; 1926, 106·2; 1925, 97·8; 1924, 94·2; 1923, 101·2; 1922, 94·8, and 1921, 89·8.

An analysis of the returns by industries shows continued expansion in manufacturing, the eighth consecutive monthly increase since

January 1, 1935. The experience of past years indicates that factory employment has declined in seven and increased in seven of the previous Septembers for which statistics are available, showing on the average for the fourteen years, a slight falling-off. The advance at the beginning of September in the present year compares favourably with this average reduction, being also rather larger than on September 1 in any other of the years when the trend has been upward, with the exception of 1933. The greatest gains on the date under review occurred in fruit and vegetable canneries and in textile and iron and steel factories, while there were important seasonal losses in fish-canneries. Among the non-manufacturing industries, mining, communications, transportation, construction and trade showed heightened activity. On the other hand, there were small reductions in logging, while employment in services was practically unchanged from the preceding month.

#### Employment by Economic Areas

Firms in all five economic areas showed substantial gains, those in Quebec and Ontario being most pronounced. The situation generally was more favourable than at the beginning of September of last year.

*Maritime Provinces.*—Employment in the Maritime Provinces showed a moderate expansion on September 1, the fifth successive

increase in as many months. The advance, though not large, is especially interesting because it is contrary to the usual seasonal trend at this time of year, the experience of the years since 1920 showing, on the average, a decline between August 1 and September 1. Most of the gain on the date under review took place in construction, mainly of highways and roads, although general building and railway construction and maintenance were also rather more active. Slight improvement was indicated in mining, communications and trade. On the other hand, manufacturing as a whole was slacker, chiefly in fish-preserving

groups showed improvement, while food, and clay, glass and stone factories released employees. The working force of the 2,231 employers co-operating in Quebec stood at 273,178 persons, as against 267,289 on August 1. A smaller advance had been registered at the beginning of September, 1934, and employment then was generally in lesser volume, the index standing at 95.4, as compared with 99.3 at the latest date. The gain on September 1 considerably exceeded the average increase indicated on that date in the years, 1921-1934.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

and lumber factories, while logging and shipping also showed curtailment. Statistics were received from 656 firms in the Maritime Provinces, whose staffs aggregated 76,325 workers on September 1, 1935, compared with 76,043 in the preceding month. A similar increase had been recorded at the beginning of September of last year; the index then was over five points lower than at the latest date, when it stood at 107.0.

*Quebec.*—Increased employment was noted in Quebec, mainly in manufacturing, logging, transportation, construction and trade; within the first-named, the textile, iron and steel, leather, lumber, electric current, musical instrument and miscellaneous manufacturing

*Ontario.*—In this province, 4,126 firms reported considerable increases in personnel, enlarging their staffs from 392,513 at the first of August, to 397,962 on September 1; curtailment had been noted on the same date last year, when the index, at 103.3, was fractionally lower than at the latest date, viz., 103.9. Manufacturing recorded substantial improvement. There were large increases in the vegetable food division, and smaller gains in textile, leather, rubber, tobacco, non-ferrous metal, electrical apparatus, non-metallic mineral and some other groups, while there were moderate declines in lumber, pulp and paper, iron and steel and clay, glass and stone factories. Among the non-manufacturing

industries, mining, construction and trade reported heightened activity, but logging and transportation were rather slacker.

*Prairie Provinces.*—A further important advance was indicated on the whole in industrial employment in the Prairie Provinces at the beginning of September as compared with August 1; the index was between seven and eight points higher than on September 1, 1934, when little general change had been recorded by the firms making returns. Data were tabulated for the date under review from 1,355 employers of 126,860 workers, as compared with 124,610 in the preceding month. Manufacturing, mining, transportation and construction afforded heightened employment; within the manufacturing group, vegetable food and non-metallic mineral products showed most of the gain. On the other hand, logging and building construction were dull. The seasonal employment afforded in harvesting operations at this time of year is, of course, not reflected in these statistics.

*British Columbia.*—Employment in British Columbia showed an increase on September 1, the fifth recorded in as many months. A

reduction had been indicated on the same date of last year, when the index, at 96.2, was nearly twelve points lower than at the latest date, (viz., 108.0). Manufacturing was slacker, largely owing to losses of a seasonal nature in fish-canning. On the other hand, fruit and vegetable canneries were decidedly more active. Logging, construction and trade also showed improvement, while mining and transportation released some workers. The personnel of the 987 firms furnishing data rose from 89,130 persons on Aug. 1, to 90,322 at the beginning of September.

Index numbers by economic areas are given in table 1.

### Employment by Cities

Employment advanced in Montreal, Quebec City, Toronto and Vancouver, while moderate curtailment was noted in Ottawa, Hamilton, Windsor and Winnipeg. The situation in these centres was generally more favourable than at the beginning of September of last year.

*Montreal.*—Employment in Montreal showed an increase on September 1, 1,999 persons

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Sept. 1, 1921.....	89.8	104.9	83.3	89.1	97.8	84.8

Dec. 1.....	98.9	106.9	96.4	101.7	94.3	92.9
Jan. 1, 1935.....	94.4	99.0	91.3	98.0	91.2	88.8
Feb. 1.....	94.6	100.1	89.5	100.2	89.2	89.6
Mar. 1.....	96.4	98.6	91.3	103.5	87.2	91.9
April 1.....	93.4	95.8	85.9	100.7	86.9	91.8
May 1.....	95.2	97.4	89.7	101.7	87.9	92.6
June 1.....	97.6	101.6	93.8	101.6	92.2	96.6
July 1.....	99.5	106.7	94.8	102.7	96.3	99.5
Aug. 1.....	101.1	106.7	97.2	102.4	98.7	106.8
Sept. 1.....	102.7	107.0	99.3	103.9	100.5	108.0
Relative Weight of Employment by Economic Areas as at Sept. 1, 1935.....	100.0	7.9	28.2	41.4	13.1	9.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

having been added since August 1 to the paylists of the 1,296 co-operating firms, who employed 132,634. Considerable improvement was noted in manufacturing, particularly in textiles, while leather, musical instrument, tobacco and iron and steel factories were also somewhat busier. Transportation, construction and trade also showed heightened activity. A smaller advance had occurred on September 1, 1934, but the index then was two points lower.

*Quebec.*—An increase was registered in Quebec, according to 166 employers of 13,486 persons, as compared with 13,249 in the preceding month. Manufacturing, particularly of leather products, and hotels and restaurants were rather more active, while other industries showed little general change. Employment as reported by employers was in greater volume than at the beginning of September of a year ago, when a slighter advance had been noted.

*Toronto.*—Manufacturing showed substantial improvement, chiefly in leather, vegetable food, textile, electrical apparatus and miscellaneous products; wholesale trade also af-

forded increased employment, and there were slight gains in construction and services. On the other hand, transportation was rather slacker. Statements were received from 1,395 firms with 120,353 workers, or 1,812 more than on Aug. 1. Expansion on a smaller scale had been indicated on the same date of a year ago, and employment then was below its present level.

*Ottawa.*—There was a minor decrease in Ottawa, chiefly in manufacturing, construction and services, while trade showed slight improvement. The 175 firms furnishing returns reported 13,342 employees, compared with 13,410 in the preceding month. On Sept. 1, 1934, a larger decline had been noted, and the index was then three points lower.

*Hamilton.*—Manufacturing showed little general change, improvement in electrical apparatus and other factories being nearly offset by losses in food and iron and steel plants. Construction also reported a small recession in Hamilton. Two hundred and seventy employers had 30,427 persons on their payrolls, as compared with 30,492 on Aug. 1. Employment had been considerably curtailed

Sept. 1.....	88.7	102.8	98.7	103.9	95.2	105.2	90.1	105.7
Relative Weight of Employment by Cit- ies as at Sept. 1, 1935	13.8	1.4	12.5	1.4	3.2	1.5	4.0	3.5

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

at the beginning of September of a year ago, when industrial activity was at a much lower level.

*Windsor.*—A moderate reduction was registered in Windsor, where the 167 co-operating firms reported 14,245 workers, as against 14,440 in the preceding month. Vegetable food factories were decidedly busier, but iron and steel plants (chiefly automobile works), showed diminished activity, while in other industries there was little general change. A substantial loss had been noted on the same date of last year, when the index was over fourteen points lower.

*Winnipeg.*—Employment in Winnipeg declined slightly; manufacturing as a group showed a small advance, but transportation and trade were slacker. An aggregate working force of 38,567 persons was reported by the 454 establishments making returns for Sept. 1, which had employed 38,789 workers in the preceding month. An increase had been recorded on the same date in 1934, but the index then was a few points lower.

*Vancouver.*—There was a considerable advance in employment in Vancouver, according to statements received from 411 firms employing 33,594 workers, as against 32,298 on Aug. 1. Manufacturing plants reported larger payrolls, the greatest gains being in the food and iron and steel industries, while trade indicated moderate improvement, and construction was decidedly busier. Employment was much more active than on the same date of a year ago, when only a small increase had been noted.

### Employment by Manufacturing Industries

Continuing the uninterruptedly favourable movement in evidence since the beginning of the year, employment in manufactures showed a further advance on Sept. 1, the 5,550 co-operating employers enlarging their payrolls from 502,086 on Aug. 1 to 506,900 on the date under review. This increase is especially interesting because factory operations have very often been curtailed in the early autumn of the years since 1920, the average index showing a small, fractional reduction between Aug.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES  
(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
Sept. 1, 1921.....	89.8	85.8	75.6	100.4	91.8	98.4	86.9	89.6	91.4
Sept. 1, 1922.....	94.8	93.6	65.9	101.6	88.8	103.3	100.8	87.7	90.1
Sept. 1, 1923.....	101.2	100.7	78.4	108.8	91.4	104.7	110.8	100.4	91.3

Sept. 1.....	102.7	100.8	77.7	128.6	82.1	85.8	110.9	127.8	121.8
Relative Weight of Employment by Industries as at Sept. 1, 1935.....	100.0	52.7	2.2	6.1	2.2	10.5	13.5	2.9	9.9

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

1 and Sept. 1. The crude index, (standing at 100·8 on Sept. 1, 1935, as compared with 99·8 in the preceding month and 94·3 on the same date in 1934), showed a gain after correction for seasonal variation, rising from 97·0 at the first of August to 98·1 at the latest date; this was the highest point since May 1, 1931. The unadjusted indexes of factory employment at Sept. 1 in the fifteen years of the record are as follows:—1935, 100·8; 1934, 94·3; 1933, 86·8; 1932, 83·1; 1931, 94·7; 1930, 108·2; 1929, 119·8; 1928, 115·9; 1927, 106·8; 1926, 104·8; 1925, 96·8; 1924, 91·5; 1923, 100·7; 1922, 93·6 and 1921, 85·8.

The edible animal, lumber, iron and steel and clay, glass and stone groups reported contractions as compared with the preceding month; these were generally seasonal in character. On the other hand, the leather, musical instrument, vegetable food, rubber, textile, tobacco and beverage, electrical apparatus,

electric current, non-ferrous metal, non-metallic mineral and miscellaneous manufactured product divisions indicated considerable improvement. The largest gains in factory employment were in Ontario.

Since Jan. 1, 1935, there has, on the whole, been uninterrupted recovery in manufactures, resulting in an increase of 15·3 per cent in the payrolls of the co-operating establishments since the opening of the year; this, of course, indicates an appreciable increase in consumers' purchasing power. Important improvement had also been indicated during the same period of 1934 and 1933, while in the two years immediately preceding, increases recorded in some months of the period January-September had been offset by declines in others, so that the index on September 1 in 1932 and 1931 was much the same as it had been at the beginning of January in these years, respectively.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Sept. 1, 1935	Aug. 1, 1935	Sept. 1, 1934	Sept. 1, 1933	Sept. 1, 1932	Sept. 1, 1931	Sept. 1, 1930

Miscellaneous.....	0·6	128·3	119·3	114·2	99·3	96·4	106·5	110·4

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

*Animal Products, Edible.*—Declines occurred in fish canneries, while other branches of this group showed little general change. The payrolls of the 288 co-operating factories aggregated 25,580 employees, as compared with 26,998 in the preceding month. Employment on September 1, 1934, had experienced a rather smaller decrease, and the index number then was nearly nine points lower than on the date under review.

*Leather and Products.*—A further gain was shown in leather factories, chiefly in footwear plants; the general increase in the group was much larger than that noted at the beginning of September of last year, when the employment indicated by the firms making returns was at a decidedly lower level. Statements were received from 283 manufacturers having 22,595 persons in their employ, as against 21,859 on August 1, 1935. Ontario firms reported the most marked increases.

*Lumber and Products.*—Moderate reductions were made in sawmills, and container, vehicle and other lumber-using factories were also slacker. The result was a decrease of 473 persons in the staffs of the 811 lumber establishments furnishing data, whose payrolls aggregated 42,965. This loss was practically the same size as that noted on September 1, 1934, when the index was several points lower.

*Musical Instruments.*—Additions to personnel were recorded in musical instrument works, 34 of which increased their labour forces by 189 persons to 1,352 on September 1. The increase occurred mainly in Quebec. A similar gain had been indicated at the beginning of September, 1934, when employment was at much the same level.

*Plant Products, Edible.*—Confectionery and chocolate and fruit and vegetable preserving factories reported heightened activity, the additions to staffs in canneries being particularly pronounced. The general improvement was on a larger scale than on the same date last year, when the index stood at 125.3, compared with 126.4 at the beginning of September, 1935. Data were compiled from 445 firms in the vegetable food division, whose payrolls rose from 32,942 on August 1, to 36,427 at the date under review. Ontario recorded the largest advances.

*Pulp and Paper Products.*—Employment in this group showed a small decline, improvement in the production of paper goods being offset by losses in pulp and paper mills, and in printing and publishing. A large reduction had been noted on September 1 of last year, when the index, at 94.4, was nearly four points lower than on the date under review.

The forces of the 583 co-operating establishments included 59,410 persons at the beginning of September, as compared with 59,498 in the preceding month.

*Rubber Products.*—Improvement was indicated in rubber factories, 51 of which employed 11,626 workers compared with 11,235 on August 1. The situation on September 1, 1934, had shown little general change as compared with the preceding month, but employment was then at a higher level, the index standing at 94.3, as against 91.2 on the date under review.

*Textile Products.*—Seasonal increases occurred in textile factories, 982 of which had 96,038 employees, as against 94,053 on August 1. Most of the advance took place in Quebec and Ontario, but the tendency was generally favourable. Garment and personal furnishing factories registered the bulk of the gain, while headwear, silk and knitting plants were also busier. The index of employment on the same date last year was some four points lower; the increase then reported had involved a smaller number of workers.

*Tobacco, Distilled and Malt Liquors.*—Further improvement was noted in this industry on September 1 as compared with August 1, since when 382 persons were added to the payrolls of the 170 co-operating factories, which employed 15,891 operatives. The level of employment was higher than at the beginning of September, 1934, when a rather smaller gain had been indicated in the group as a whole.

*Chemical Products.*—Employment in this division showed no general change, according to statistics from 192 employers of 10,514 persons, compared with 10,469 on August 1. Activity was greater than on the same date a year ago.

*Clay, Glass and Stone Products.*—Factories producing these classes of building materials showed seasonal curtailment; statements were received from 198 plants, having 8,905 workers, as against 9,282 in the preceding month. A decrease had also been noted at the beginning of September last year; the index then was several points lower.

*Electric Current.*—Considerable expansion was shown in electric current plants, 97 of which employed 14,996 persons, or 456 more than at August 1. Employment was rather brisker than on September 1, 1934, when a smaller increase had been indicated.

*Electrical Apparatus.*—Employment in this group increased at the beginning of September, 392 workers having been added since August 1 to the forces of the 111 co-operating estab-

ishments, which had 13,398 employees. The gain occurred mainly in Ontario. A smaller advance had been noted on the corresponding date in 1934, and the index was then over seventeen points lower.

*Iron and Steel Products.*—The rolling mill, machinery, agricultural implement and vehicle divisions of the iron and steel group recorded contractions in employment, while tool, wire and some other factories were busier. On the whole, there was a reduction of 1,673 in the forces of the 843 co-operating iron and steel manufacturers, who employed 105,161 persons at the beginning of September. The largest losses were in Ontario. The trend on September 1, 1934, had also been downward, the decline then being much larger, while the index number was between eight and nine points lower than on the date under review, when it stood at 79.7.

*Non-Ferrous Metal Products.*—The base metal and the smelting and refining divisions reported slightly heightened employment; 156 manufacturers in the group as a whole employed 19,495 operatives, as against 19,347 on August 1. Improvement had also been indicated on the same date last year, but general activity was then decidedly less.

*Mineral Products.*—Employment in this group showed an advance, according to statements from 132 establishments with 14,349 persons on their payrolls, as against 14,126 at the beginning of August. The index was higher than on September 1, 1934, when a small gain had taken place.

### Logging

Employment in logging camps showed a slight falling-off at the beginning of September, according to the 276 co-operating firms, whose payrolls aggregated 21,552 workers, compared with 21,667 in the preceding month. The number employed in the bush on September 1 was smaller than on the same date in 1934, but was larger than in most other years of the record; an active season in bush operations has been forecast for the winter of 1935-36.

### Mining

*Coal.*—Data were received from 100 operators having 23,397 men on their payrolls, as compared with 22,619 at the beginning of August. The Prairie coal-fields reported most of the expansion, which involved a much larger number of workers than that registered on the same date a year ago; the index number then was over three points lower than on the date under review.

*Metallic Ores.*—Employment in metallic ore mines showed a further improvement,

according to returns from 165 firms whose forces rose from 27,389 persons on August 1, to 27,748 at the beginning of September. An advance had also been shown on September 1, 1934, but employment was then in smaller volume.

*Non-Metallic Minerals* (other than coal).—Continued gains were reported in this group, in which 80 firms enlarged their staffs by 487 workers to 7,755 on September 1. A slight increase had been noted on the corresponding date of last year; the level of employment was then considerably lower.

### Communications

Further expansion was indicated in the communications division, in which the companies reporting employed 21,741 workers, as compared with 21,608 in the preceding month. The index was fractionally lower than in the early autumn of 1934; the gain then indicated had been much larger.

### Transportation

*Street and Electric Railways and Cartage.*—Improvement was shown in local transportation on the date under review, when the 209 employers furnishing data reported 26,269 workers, or 287 more than in the preceding month. The advances were chiefly in the Prairie Provinces. A rather greater increase had been recorded at the beginning of September, 1934, when the index was four points lower.

*Steam Railways.*—There was a further gain in the number employed in steam railway operation on September 1, according to the 100 companies and branches from which returns were received, and which had 59,908 employees, compared with 59,390 on August 1. Employment was at a slightly higher level than on the same date last year, the advance then noted having been small. The improvement reported at the beginning of September, 1935, took place mainly in Quebec and the Prairie Provinces.

*Shipping and Stevedoring.*—Reductions in staffs were noted in the water transportation group, in which activity generally was rather greater than on the same date in 1934. Statements were received from 99 employers of 15,367 workers, as against 15,835 in the preceding month.

### Construction and Maintenance

*Building.*—Important expansion was shown in building construction, in which employment was brisker than in the late summer of 1934. Data were received from 693 con-

tractors, whose payrolls stood at 25,731 on September 1, 1935, as compared with 24,631 in the beginning of August. The trend was favourable in all except the Prairie Provinces.

*Highway.*—There was a further pronounced increase in this group, 4,730 men being added to the forces of the 361 co-operating employers, who had 70,876 workers. There were gains in all five economic areas, the largest occurring in Quebec. Activity was generally less than on September 1, 1934, when a marked contraction had been reported.

*Railway.*—Further increases in employment were indicated by the 32 firms furnishing data in this division, who employed 33,643 persons, as against 32,139 in the preceding month. Improvement occurred in all provinces except British Columbia. A more pronounced advance had been noted on the corresponding date of 1934; the index number then was between two and three points lower.

### Services

No general change was shown in the service group, in which business this year has been brisker than in 1934. The 457 establishments

furnishing returns for September 1, 1935, reported 27,657 assistants, or practically the same number as at August 1.

### Trade

Improvement was noted in both retail and wholesale establishments; employment in this group continued at a higher level than in the late summer of last year, when a smaller gain had been indicated in the group as a whole. Returns were received from 1,148 trading establishments employing 96,103 persons, compared with 95,207 at the beginning of August, 1935. This increase exceeded the average advance recorded between August 1 and September 1 in the years since 1920.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of August, 1935

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are employed at work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The consistently upward trend of activity among local trade unions, which has been manifest since the close of April, was again apparent throughout August, unemployment standing at 14.2 per cent, in contrast with a percentage of 15.1 in July. The percentage for August was based on the reports furnished by 1,727 labour organizations, involving a total of 166,636 members, 23,640 of whom were without work on the last day of the month. A somewhat better situation obtained also than in August a year ago, when 16.5 per cent of idleness was reported. The coal mines of Alberta afforded a much greater volume of work than in July and were almost entirely responsible for the more favourable conditions reported from that province. The tendency in

Quebec, Ontario and Manitoba was also toward a greater employment prevalence, though the changes from July were very slight. On the contrary, Nova Scotia, New Brunswick, Saskatchewan and British Columbia unions showed a nominally adverse tendency. Compared with the returns for August a year ago, British Columbia unions reflected improvement, on a noteworthy scale, during the month surveyed, practically all trades participating in the advance. In Manitoba, also, the gains reported were appreciable, particularly in the manufacturing industries and in lesser degree among building tradesmen and in steam railway operation. Expansion of more moderate proportions was indicated from Ontario, notably due to the extensive recovery shown in building activities from August a year ago and in Quebec, Saskatchewan and Alberta there was a slight rise in work available. Retarded employment, however, was noted in New Brunswick and Nova Scotia, though the change from August last year was small.

A separate record is kept each month of unemployment in the largest city in each province, with the exception of Prince Edward Island. Of these, Halifax, Toronto, Winnipeg, Regina and Edmonton unions all reflected a more favourable employment movement during August than in the previous month, though the gains were of little importance in any

one city. Activity in Saint John, Montreal and Vancouver, on the other hand, eased off very slightly from July. In contrasting with the returns for August last year Regina unions, with a gain of nearly 7 per cent, indicated the most improved conditions during the month reviewed, followed by advances of over 4 per cent among Winnipeg, Edmonton and Vancouver unions. Increased employment of much lesser degree, however, was recorded from Toronto and Montreal. A sharp drop in activity from August a year ago was indicated by Saint John unions and in Halifax recessions on a considerably smaller scale were registered.

gaged than in July, and among garment workers, general labourers and cigar makers the improvement recorded was noteworthy. Expansion of moderate proportions was indicated by fur workers, while among leather and brewery workers and papermakers the variation from July was very slight, though favourable. On the other hand, increased slackness on a pronounced scale was evident among wood and glass workers, and recessions of much lesser importance were registered by iron and steel, textile and carpet, and jewellery workers, bakers and confectioners, metal polishers, and printing tradesmen. When compared with the returns for August last year

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The chart which accompanies this article illustrates the trend of unemployment by months from January, 1929, to date. During August the curve pursued a downward course from the previous month, continuing the favourable trend shown since the close of April. The point attained by the curve at the end of the month was lower than that of August, 1934, and indicative of more active conditions during the month reviewed.

The 469 unions in the manufacturing industries making returns at the end of August, combining a membership of 53,672 persons, showed that 7,531, or a percentage of 14.0, were idle, as compared with percentages of 15.6 in July and 13.6 in August, 1934. Hat and cap workers were much more busily en-

gaged than in July, and among garment workers, general labourers and cigar makers the improvement recorded was noteworthy. Expansion of moderate proportions was indicated by fur workers, while among leather and brewery workers and papermakers the variation from July was very slight, though favourable. On the other hand, increased slackness on a pronounced scale was evident among wood and glass workers, and recessions of much lesser importance were registered by iron and steel, textile and carpet, and jewellery workers, bakers and confectioners, metal polishers, and printing tradesmen. When compared with the returns for August last year

A brighter outlook was apparent in coal mining during August than in the previous month, the 50 unions making returns, with a total of 16,452 members, showing an unemployment percentage of 14.7, as compared with 19.1 per cent in July. Activity, however, was very slightly curtailed from August a year ago, when 13.7 per cent of the members reported were without work. Accounting almost entirely for this better situation from July

was the improvement recorded in the Alberta mines, British Columbia unions showing but a slightly upward tendency. In Nova Scotia the percentage of idleness remained identical with that of July. Conditions in the Alberta mining areas, however, were somewhat quieter than in August a year ago, and in Nova Scotia there was a slight tendency toward retarded employment. British Columbia members were afforded the same volume of work in both months compared.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.9

Aug., 1935.....	8.3	8.1	18.3	13.3	10.7	7.9	18.4	13.1	14.2

Some improvement was noted in the building and construction trades during August from the preceding month, as manifest by the reports forwarded from 182 organizations with an aggregate of 17,043 members. Of these, 7,515 were without employment on the last day of the month, a percentage of 44.1 in contrast with 46.3 per cent in July. Gains in activity on a much larger scale were recorded from August last year, unemployment for that month standing at 57.3 per cent. Carpenters and joiners, painters, decorators and paperhangers, and plumbers and steamfitters all reported fair-sized increases in work afforded from July, and bricklayers, masons and plasterers, electrical workers and steam shovelmen lesser advances. A large falling off in employment, however, was apparent among tile layers, lathers and roofers, granite and stone cutters, and bridge and structural iron workers. Hod carriers and building labourers also reported declines, which were of minor importance. All trades participated in the advancement noted from August last year, steam shovelmen, bridge and structural iron workers, granite and stone cutters, and tile layers, lathers and roofers especially showing large percentage increases in activity, though the gains recorded by carpenters and joiners, and bricklayers, masons and plasterers involved a much greater number of members. Electrical workers, painters, decorators and paperhangers, plumbers and steamfitters, and hod carriers and building labourers also contributed in substantial measure to the total expansion.

In the transportation industries during August nominal decreases in activity were reflected from July, though improvement on a rather small scale was noted from August, 1934. This was apparent from the reports tabulated from 774 organizations, with 55,360 members, 3,831, or 6.9 per cent, of whom were unemployed on the last day of the month, as contrasted with 6.7 per cent in July and 9.2 per cent in August last year. Among steam railway employees, whose returns included over 77 per cent of the entire group membership reported, there was little change from July, though the tendency was unfavourable, as was the case also among street and electric

railway employees. Navigation workers reported moderate employment recessions from the previous month, teamsters and chauffeurs alone being busier, though the variation from July was but fractional. Compared with the situation for August last year navigation workers were considerably better employed during the month reviewed and conditions for steam and street and electric railway employees improved slightly. Among teamsters and chauffeurs there was a nominal adverse change.

Retarded activity was evident among retail shop clerks during August from both the preceding month and August a year ago, according to the returns compiled from 5 associations involving 1,858 members. Of these, 229 were out of work on the last day of the month, a percentage of 12.3, contrasted with percentages of 9.1 in July and 8.2 in August last year.

Civic employees showed little change in conditions in all three months used for comparative purposes, the 80 organizations reporting in August, with a membership of 8,226 persons, indicating an unemployment percentage of 3.0, in contrast with 3.1 per cent in July and 3.4 per cent in August, 1934.

There was a decided increase in slackness in the miscellaneous group of trades during August as shown by the reports received from 119 unions with 4,598 members. Of these, 1,011 were idle at the end of the month, a percentage of 22.0, as compared with 12.8 per cent in July. The slowing up of activity noted from August of last year was also considerable, unemployment for that month standing at 16.8. Losses in employment for barbers was the chief factor in this unfavourable movement, both when compared with the previous

month and August a year ago. Hotel and restaurant employees also reported a lowering in the volume of work available, which was quite substantial when compared with August, 1934. Among unclassified workers there was a fractional drop in activity from July, but the situation improved moderately over August last year. Theatre and stage employees and stationary engineers and firemen, however, were better engaged than in either of the months used for comparison.

Adequate work was provided for fishermen during August, while in July 0.9 per cent of unemployment was recorded and in August last year 66.7 per cent. For the month surveyed reports were received from 3 unions of these workers, covering a membership of 562 persons.

Little variation in the level of activity was shown by lumber workers and loggers during August from the previous month, though the tendency was favourable, and improvement on a pronounced scale was reflected from August, 1934. Reports for August were furnished by 4 unions involving 627 members, 7.2 per cent of whom were idle on the last day of the month, in contrast with 7.3 per cent in July and 37.0 per cent in August, 1934.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1934, inclusive, and also the percentage of unemployment by provinces for August of each year from 1919 to 1932, inclusive, and for each month from January, 1933, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for August, 1935

During the month of August, 1935, reports from the offices of the Employment Service of Canada showed gains in the average daily placements of 16 per cent and nearly 10 per cent, respectively, over those of the preceding month, and over those effected during the corresponding period a year ago, the gains in both instances being largely due to increased placements in farming, although substantial gains were also reported in construction and maintenance, services and manufacturing and others of lesser amount in trade and transportation. Logging and mining, only, showed declines, the greater loss under each comparison being in logging.

The accompanying chart shows the trend of employment since January, 1933, as represented by the ratio of vacancies notified and of placements effected for each 100 applica-

tions for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curve of vacancies and of placements in relation to applications varied only slightly throughout the month under review, being somewhat lower during the first half of August than that reported at the close of July, but registering a slightly higher level during the latter half of the month. At the close of August, however, both levels were several points above those recorded at the end of the corresponding period a year ago. The ratio of vacancies to each 100 applications was 65.2 during the first half and 67.8 during the second half of August, 1935, in contrast with the ratios of 55.6 and 61.6 during the corresponding periods of 1934. The ratios of placements to each

100 applications during the periods under review were 61.6 and 62.8, as compared with 52.5 and 58.2, respectively, during the corresponding month of 1934.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during August, 1935, was 1,488, as compared with 1,353 during the preceding month and with 1,271 in August a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,236, in comparison with 2,146 in July,

were of men and 4,656 of women, while placements in casual work totalled 11,620. The number of vacancies reported by employers was 30,207 for men and 9,957 for women, a total of 40,164, while applications for work numbered 60,363, of which 47,439 were from men and 12,924 from women. Reports for July, 1935, showed 35,168 positions available, 55,778 applications made, and 33,043 placements effected, while in August, 1934, there were recorded 34,304 vacancies, 58,372 applications for work and 32,378 placements in regular and casual employment.

The following table gives the placements

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

1935, and with 2,162 during August last year.

The average number of placements made daily by the offices of the Service during August, 1935, was 1,392, of which 961 were in regular employment and 431 in work of one week's duration or less, as compared with a total daily average of 1,271 during the preceding month. Placements in August a year ago averaged 1,200 daily, consisting of 734 placements in regular and 466 in casual employment.

During the month of August, 1935, the offices of the Service referred 39,329 persons to vacancies and effected a total of 37,566 placements. Of these, the placements in regular employment were 25,946, of which 21,290

effected by the offices of the Employment Service of Canada, each year, from January, 1925, to date:—

Year	Placements		
	Regular	Casual	Totals
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679

## NOVA SCOTIA

During the month of August, 1935, positions offered through employment offices in Nova Scotia were nearly 20 per cent less than in the preceding month and nearly 19 per cent less than during the corresponding month of last year. Placements, also, were nearly 21 per cent less than in July and nearly 22 per cent below August, 1934. With the exception of nominal gains in services and transportation, all industrial divisions showed fewer placements than were reported during August of last year. The only losses of importance, however, were in construction and maintenance, and logging. Placements under construction and maintenance numbered 493, and in services 258. Of the latter, 208 were of household workers. During the month 315 men and 82 women were placed in regular employment.

## NEW BRUNSWICK

There was an increase of over 5 per cent in the number of positions offered through employment offices in New Brunswick during August when compared with the preceding month, and of over 7 per cent in comparison with the corresponding month of last year. Placements also were over 4 per cent higher than in July and over 10 per cent above August, 1934. When comparing placements by industrial divisions with August of last year, construction and maintenance and services showed gains, but these were offset in part by losses in logging and manufacturing. The changes in other groups were small. During the month 388 placements were made under construction and maintenance, and 535 in services. Of the latter, 450 were of household workers. There were 406 men and 90 women placed in regular employment during the month.

## QUEBEC

The demand for workers, as indicated by orders received at employment offices in the Province of Quebec during August, was nearly 10 per cent greater than in the preceding month and 15 per cent above the corresponding month of last year. There was an increase also in placements of over 9 per cent when compared with July and of over 15 per cent in comparison with August, 1934. Increased placements in construction and maintenance and manufacturing, with small gains in trade, services and farming accounted for the improvement reported over August of last year. Small losses were recorded in logging, transportation, and mining. Placements by industrial divisions included manufacturing 279; logging 437; farming 63; construction and maintenance 1,472; trade 201; and services 2,129, of which 1,881

were of household workers. Regular employment was found for 2,449 men and 1,545 women.

## ONTARIO

Orders received at employment offices in Ontario during August called for 4 per cent more workers than in the preceding month and nearly 22 per cent more than during the corresponding month of last year. There was a gain also in placements of nearly 2 per cent when compared with July and of over 21 per cent in comparison with August, 1934. Substantial increases in placements over August of last year were reported in farming and construction and maintenance, supplemented by smaller gains in services and manufacturing. The only declines of importance were in logging and mining. Placements by industrial divisions included manufacturing 552; logging 290; farming 2,514; transportation 123; construction and maintenance 8,695; trade 219; and services 3,547, of which 2,067 were of household workers. There were 7,303 men and 1,495 women placed in regular employment during the month.

## MANITOBA

During August, orders received at employment offices in Manitoba called for 40 per cent more workers than in the preceding month and 13 per cent more than during the corresponding month of last year. There was a gain also in placements of nearly 37 per cent when compared with July and of nearly 11 per cent in comparison with August, 1934. The only gain of importance in placements over August of last year was in farming and accounted for the increase under this comparison. Construction and maintenance showed the largest decline, and there was a reduction also in logging. Small changes only were reported in other groups. Industrial divisions in which most of the placements were effected during the month were farming 2,392; construction and maintenance 552; and services 649, of which 522 were of household workers. Placements in regular employment numbered 2,937 of men and 324 of women.

## SASKATCHEWAN

Opportunities for employment, as indicated by orders received at employment offices in Saskatchewan during August, were nearly 124 per cent better than in the preceding month and nearly 71 per cent in excess of the corresponding month of last year. Placements also were over 162 per cent higher than in July and nearly 66 per cent above August, 1934. A substantial increase in farm placements accounted for the gain over August of last year.

\*46 Placements effected by offices since closed.

Of the changes in other groups, the most important were a decline in construction and maintenance, and an increase in services. Placements by industrial divisions included farming 4,294; construction and maintenance 164; and services 865, of which 642 were of household workers. There were 4,392 men and 532 women in regular employment during the month.

#### ALBERTA

There was an increase of nearly 10 per cent in the number of positions offered through employment offices in Alberta during August, when compared with the preceding month and of over 5 per cent in comparison with the corresponding month of last year. Placements also were nearly 8 per cent higher than in July and over 6 per cent above August, 1934. When comparing placements during the month under review with August of last year by industrial divisions, the largest increase was in construction and maintenance, with farming, manufacturing, logging and transportation showing next in order. Services showed the only decline of importance. Placements by industrial divisions included manufacturing 90; farming 1,391; construction and maintenance 851; services 509, of which 428 were of household workers. During the month 1,918 men and 368 women were placed in regular employment.

#### BRITISH COLUMBIA

Employment opportunities, as indicated by orders received at employment offices in British Columbia during August, were over 13 per cent less favourable than in the preceding month and over 18 per cent fewer than during the corresponding month of last year. Placements also declined over 14 per cent when compared with July and over 18 per cent in comparison with August, 1934. The only decline of importance in placements from August of last year was in construction and maintenance, and accounted for the decrease under this comparison. All other groups, except mining, showed gains, but none of these changes were large. Placement by industrial divisions included; farming 228; construction and maintenance 2,159; and services 638, of which 385 were of household workers. Placements in regular employment numbered 1,570 of men and 220 of women.

#### Movement of Labour

During the month of August, 1935, the offices of the Employment Service of Canada effected 25,946 placements in regular employment, 16,371 of which were of persons for whom the employment found was outside the immediate

locality of the offices at which they were registered. Of the latter, 637 were granted the Employment Service reduced transportation rate, 619 going to centres within the same province as the despatching office and 18 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may wish to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate in Quebec during August were of bushmen, 5 in number who travelled to employment in the Pembroke zone on certificates secured at Hull. Offices in Ontario granted reduced rate certificates to 415 workers during August, all of whom were bound for points within the province. Of these, 309 were issued at Port Arthur to 168 bush workers, 119 highway construction workers, 13 mine workers, 4 restaurant employees, 4 cookees and one hotel cook travelling to various centres within the territory covered by that city office. From Sudbury, 82 bush workers, 2 clerks and one mine worker, and from Fort William 10 survey men, 4 bush workers and one construction cook were sent to situations within their respective zones. The Port Arthur zone also received one highway construction foreman, and the Sudbury zone one blacksmith from Pembroke, while to Fort William in addition, one steel sharpener was transferred from Timmins. The Toronto office assisted in the despatch of 3 hotel cooks to Chatham. The Winnipeg office was responsible for all transfers at the reduced rate in Manitoba during August, totalling 13. Of these, 2 were provincial and 11 interprovincial. The former were for the Winnipeg zone and included one farm housekeeper and one mine worker. The movement outside the province was entirely to the Port Arthur zone, which was the destination of 4 mine workers, 2 farm hands, one hotel general, one blacksmith, one cookee, one baker and one telegrapher. In Saskatchewan, 14 persons profited by the Employment Service reduced transportation rate during August, all of whom went to provincial employment. Travelling from Regina one domestic was conveyed to Saskatoon and 11 teachers to situations within the Regina zone. The Saskatoon office was instrumental in the despatch of one teacher and one farm hand within its own zone. The labour movement in Alberta comprised the transfer of 179 persons, 177 within the province and 2 outside. The latter were stockers for the Saskatoon zone, travelling on certificates secured at Edmonton. Provincially from Edmonton one farm hand each was sent to the Calgary and Drumheller zones, and 126

highway construction workers, 12 farm hands, 2 farm domestics, 10 mine workers, 6 steamship company employees, 2 Dominion Parks employees, one millhand, one blacksmith, and one hotel cook to employment at centres within the Edmonton zone. Granted certificates at the Calgary office, 10 teamsters and one harvester went to Drumheller, and 3 farm hands within the Calgary zone. British Columbia offices issued 11 reduced rate certificates during August, all to points within the province. From Vancouver were despatched one mine blacksmith and one survey assistant to Kamloops, one mine engineer to Nelson, one teacher to Prince Rupert, one domestic to

Penticton, and 2 mine workers and one farm housekeeper within the Vancouver zone. Travelling from Prince Rupert to employment within the same zone were 2 farm hands. The Penticton zone in addition received one fruit packer from New Westminster.

Of the 637 persons who were conveyed at the Employment Service reduced transportation rate during August, 350 travelled by the Canadian National Railways, 281 by the Canadian Pacific Railway, 3 by the Pacific Great Eastern Railway, 2 by the Northern Alberta Railway, and one by the Temiskaming and Northern Ontario Railway.

#### (4) Building Permits Issued in Canada During August, 1935

The value of the building permits issued during August, 1935, was practically the same as in the preceding month, while in the more significant comparison with August of last year, there was a considerable increase; during the month under review, the 61 co-operating centres authorized building estimated to cost \$4,293,058, as compared with \$4,266,224 in July, 1935, and \$3,764,425 in August, 1934. There was, therefore, an increase of 0.6 per cent in the first comparison and of 14.0 per cent in the second.

The value of the building authorized in each month of the present year has been higher than in the same month of 1934, while since January, the aggregate for each month has also exceeded that for the corresponding month in 1933. The cumulative total for the first eight months of 1935 is higher than in any of the last three years, standing at \$33,188,353, as compared with \$17,433,272 in the months January-August, 1934, \$14,407,111 in 1933 and \$32,576,464 in 1932. Although the improvement indicated in the present year is partly due to the granting of construction permits for public buildings in several centres as an unemployment relief measure, the movement in general building operations has also been distinctly more favourable than in the last few years. In comparison with earlier years of the record, from 1920 to 1931, however, the value of building authorizations continues low. The index number of wholesale prices of building materials during the elapsed months of 1935, at 82.0 per cent of the 1926 basic average, was lower than in the same period of any preceding year for which building statistics for the 61 cities are on record, with the exception of 1932 and 1933.

Some 50 cities furnished detailed statistics showing that they had issued about 240 per-

mits for dwellings estimated to cost over \$1,800,000 and more than 1,900 permits for other buildings valued at approximately \$2,400,000. During July, authority was granted for the erection of some 300 dwellings and 1,900 other buildings, estimated at about \$1,090,000 and \$3,100,000 respectively.

Nova Scotia, Ontario and Saskatchewan reported gains as compared with July, 1935, that of \$903,917 in Nova Scotia being most pronounced. Of the reductions elsewhere indicated, that of \$1,118,126 or 74.3 per cent in British Columbia was greatest.

Nova Scotia, Ontario and British Columbia reported higher aggregates of building permits issued than in August of last year; the largest increase of \$873,252 was in Nova Scotia. Of the declines recorded in the remaining provinces, that of \$633,687 or 65.7 per cent in Quebec was most marked.

Of the four largest cities, Montreal and Winnipeg showed decreases as compared with July, 1935, and also with August, 1934, while in Toronto and Vancouver there was a decline in the first, but an increase in the second comparison. Of the other centres, Halifax, Belleville, Chatham, Galt, Hamilton, Kitchener, Oshawa, Ottawa, Owen Sound, Peterborough, St. Catharines, Sault Ste. Marie, Riverside, Woodstock, Brandon, Saskatoon and Prince Rupert recorded gains in both comparisons.

*Cumulative Record for First Eight Months, 1920-1935.*—The following table gives the value of the building authorized by 61 cities during August and in the first eight months of each year since 1920, as well as index numbers of wholesale prices of building materials in the first eight months of the years since 1920, (average 1926=100).

Year	Value of permits issued in August	Value of permits issued in first eight months	Indexes of value of permits issued in first eight months (1926=100)	Average indexes of wholesale prices of building materials in first eight months (1926 avge. = 100)
1935.....	4,293,058	33,188,353	30.4	82.0
1934.....	3,764,425	17,433,272	16.0	82.8
1933.....	1,910,809	14,407,111	13.2	77.0
1932.....	3,823,251	32,576,464	29.8	77.7
1931.....	8,201,879	78,194,906	71.6	83.0
1930.....	11,029,564	115,268,330	105.5	83.4
1929.....	21,582,221	168,894,072	154.6	99.2
1928.....	17,448,542	145,247,485	133.0	96.4
1927.....	29,478,378	126,690,292	116.0	96.2
1926.....	11,672,599	109,211,942	100.0	100.7
1925.....	9,511,008	88,223,328	80.8	103.1
1924.....	9,406,733	81,762,083	74.9	109.0
1923.....	11,425,031	97,551,074	89.3	111.8
1922.....	18,158,932	105,181,416	96.3	108.4
1921.....	10,928,039	77,665,614	71.1	128.6
1920.....	10,805,846	86,303,601	79.0	143.8

The aggregate for the first eight months of this year was higher by 90.4 per cent than in 1934, and was also higher than in 1933 or 1932. With these exceptions, the total was less than

in any other year of the record; as already stated, the average index number of wholesale prices of building materials was also lower in 1935 than in previous years of this record except 1933 and 1932.

The Department of Education of the Province of Alberta has recently published its twenty-ninth annual report covering the year ending June 30, 1934. The report shows that 936 male teachers holding first class certificates received an average salary of \$1,377.86; 1,629 female teachers holding first class certificates received an average salary of \$996.55; 801 male teachers with second class certificates received an average salary of \$909.13; 2,438 female teachers with second class certificates received an average salary of \$872.12; 13 third class male teachers received an average salary of \$701.54; 28 third class female teachers received an average salary of \$682.41; 48 male vocational teachers received an average salary of \$2,387.85; while 18 female vocational teachers received an average salary of \$1,906.78.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, September, 1935, summarized the employment situation as follows:—

There was a further improvement in employment between July 22 and August 26. The estimated number of insured persons in employment increased by 43,000.

The most marked improvement during the month occurred in the coal mining industry, but employment also improved in iron and steel manufacture, general engineering, ship-building and ship repairing, motor vehicle, cycle and aircraft manufacture, the building, furniture, pottery and wool textile industries, cotton preparing, spinning, etc., and cocoa, chocolate and sugar confectionery manufacture. There was also a substantial reduction in the numbers registered as temporarily stopped in the jute industry, following the end of local holidays. On the other hand there was a further decline in employment in most of the clothing trades and in the linen industry, and there was also some falling off in cotton manufacturing (weaving, etc.), artificial silk yarn spinning, dock and harbour service, the distributive trades, and glass bottle making.

Among those workpeople, of ages 16-64, who were insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at August 26, 1935 (including

those temporarily stopped as well as those wholly unemployed), was 15.0, as compared with 15.4 at July 22, 1935, and with 16.5 at August 20, 1934. The percentage wholly unemployed at August 26, 1935, was 12.4, as compared with 12.3 at July 22, 1935; while the percentage temporarily stopped was 2.6, as compared with 3.1. For males alone the percentage at August 26, 1935, was 17.1 and for females, 9.6; the corresponding percentages at July 22, 1935, were 17.6 and 9.5.

The estimated number of insured persons, aged 16-64, in employment in Great Britain at August 26, 1935, was 10,424,000. This was 43,000 more than a month before, and 244,000 more than a year before.

At August 26, 1935, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,533,259 wholly unemployed; 334,419 temporarily stopped, and 80,286 normally in casual employment, making a total of 1,947,964. This was 24,977 less than a month before, and 188,614 less than a year before. The total included 1,537,022 men, 70,483 boys, 282,312 women, and 58,147 girls.

The persons on the Registers included 860,684 persons with claims for insurance benefit; 733,652 insured persons with applications for unemployment allowances; 211,447 insured persons (including 23,102 insured juveniles under 16 years of age), not in receipt

of insurance benefit or unemployment allowances, and 142,181 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at August 26, 1935, was 2,022,450.

#### United States

*Manufacturing Industries.*—An increase of 180,000 workers on the pay rolls of the manufacturing industries regularly surveyed by the Bureau of Labor Statistics and a decline of 25,000 in the non-manufacturing industries resulted in an estimated net employment gain of 155,000 persons in August, as compared with July.

Weekly wage disbursements in the manufacturing industries are estimated to have increased by \$8,900,000. In the non-manufacturing industries, weekly pay rolls declined by \$900,000, leaving a net increase in the total weekly pay rolls of the industries reporting to the Bureau of Labor Statistics of \$8,000,000.

Factory employment rose by 2·8 per cent and pay rolls by 6·7 per cent. Of the 90 industries surveyed, 68 showed increases in the number of workers employed and 72 showed pay roll gains. Despite the employment decline shown in the combined total for the 17 non-manufacturing industries, 10 individual industries in this group showed employment increases and 8 showed advances in pay rolls.

Increases in factory employment and pay rolls are usual in August, gains having been shown for each year since 1919 with but one exception (1930). Increases in pay rolls have been reported in all but two instances (1930 and 1931). The gain of 2·8 per cent in factory employment is slightly more pronounced than previous August gains and has been exceeded during the past 16 years in only two instances (1922 and 1933). The increase of 6·7 per cent in pay rolls has been exceeded in only one instance, 1933.

Gains in factory employment in August, 1935, were shown in both the durable and non-durable goods groups. Employment in the non-durable goods group increased 3·9 per cent while the durable goods group showed a gain of 1·6 per cent. The August employment index for the non-durable goods group (94·0) indicates that for every 1,000 workers employed during the index-base period, 1923-25, 940 were employed in August, 1935, while the employment index for the durable goods group (70·4) indicates that for every 1,000 employed in 1923-25, 704 were on factory pay rolls.

The expansion in employment was widely distributed. Among the more important industries in which gains in employment were shown were blast furnaces, steel works, rolling mills, electrical machinery, foundries and machine shops, furniture, sawmills, millwork,

silk goods, knit goods, woolen and worsted goods, men's and women's clothing, boots and shoes, canning, book and job printing, and petroleum refining.

Industries of major importance in which decreases in employment were shown over the month interval were automobiles, cotton goods, slaughtering and meat packing, newspapers, and chemicals.

*Non-Manufacturing Industries.*—Gains in employment were reported in 10 of the 17 non-manufacturing industries surveyed monthly by the Bureau of Labor Statistics and increased pay rolls in 8 industries. The most pronounced increase in employment (5·2 per cent) was in bituminous coal mining while gains ranging from 2·6 per cent to 3·6 per cent were shown in brokerage, crude-petroleum producing, private building construction, and metalliferous mining. The outstanding decrease in employment from July to August (21·7 per cent) was in the anthracite mining industry. The decreases in the remaining industries were 2·6 per cent or less.

*WHOLESALE AND RETAIL TRADE.*—Employment in wholesale trade showed a slight gain in August. Reports received from 14,374 wholesale establishments showed a net increase of 0·8 per cent over the month interval. Among the more important lines of wholesale trade in which improvement was shown were: dry goods and apparel, 2·2 per cent; electrical goods, 1·9 per cent; machinery, equipment and supplies, 1·2 per cent; automotive products, 1 per cent; chemicals and drugs, 0·6 per cent; hardware, 0·3 per cent; and assemblers and country wholesale buyers of agricultural products showed a seasonal increase of 11·1 per cent.

Based on reports supplied by 45,465 retail establishments employing 692,657 workers in August, 1935, there was a decrease of 1·9 per cent in number of workers over the month interval. The general merchandising group, composed of department variety, general merchandising, and mail-order houses showed a falling-off of 3·3 per cent. Other important lines of retail trade in which declines were shown were: food 1·2 per cent; automotive, 0·5 per cent; apparel, 6 per cent. The group comprising the retail building material dealers showed a gain of 0·6 per cent in number of workers from July to August, and furniture and household goods establishments reported an increase of 0·3 per cent.

*PUBLIC UTILITIES.*—The electric light and power and manufactured gas industry reported an increase of 1·1 per cent in employment from July to August, marking the sixth consecutive month in which gains have been registered. The telephone and telegraph in-

dustry also reported a small gain in number of workers over the month interval. Employment in the electric railroad and motor bus operation and maintenance industry declined 0.4 per cent from July to August.

**SERVICE INDUSTRIES.**—Among the service industries surveyed, the largest percentage gain in employment (3.1 per cent) was shown in brokerage firms. Two additional industries reported small increases, year-round hotels 0.4 per cent, and banks 0.3 per cent. The dyeing and cleaning industry reported a seasonal decrease of 2.6 per cent and laundries and insurance companies reported declines of 0.3 per cent and 0.1 per cent, respectively.

**MINING.**—Three of the 5 mining industries reported increased employment from July to August. Bituminous coal mines reported a gain of 5.2 per cent in number of workers coupled with a gain of 29.7 per cent in pay rolls. These gains indicate a partial recovery from the sharply reduced operations in the preceding month. Crude-petroleum produc-

ing firms reported an expansion of 2.8 per cent in employment over the month interval and metalliferous mines reported a gain of 2.6 per cent. In the remaining 2 industries decreases in employment were shown, quarries reporting 0.3 per cent fewer employees in August than in July while anthracite mines reported a further decline of 21.7 per cent in number of workers from the July level.

**BUILDING CONSTRUCTION.**—Continuing the expansion which began in March of this year, employment in the private building construction industry increased 3.6 per cent from July to August and pay rolls increased 4.4 per cent. These percentages are based on reports supplied by 9,815 contractors employing 86,682 workers in August, 1935. The employees reported are engaged in erecting, altering, and repairing buildings, exclusive of projects financed by the Public Works Administration or Reconstruction Finance Corporation funds, regular appropriations of Federal, State, and local governments, or loans insured by the Federal Housing Administration.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the *LABOUR GAZETTE* for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31,

1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wage Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wage scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924 provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district, or fair and reasonable hours. These "A" conditions, in so far as wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the *LABOUR GAZETTE* of June, 1930, p. 652.

The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the workpeople employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper

books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest, to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

The Department of Labour is furnished from month to month with information regarding the contracts awarded by various departments of the Government of Canada which include among their provisions fair

wages conditions for the protection of the labour to be employed. During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:

#### DEPARTMENT OF FINANCE

##### *Contracts in Group "B" (Manufacture of Equipment, Supplies, etc.)*

During the month of August, the Department of Finance awarded the following contracts under the Supplementary Public Works Construction Act, 1935 (all of which were subject to the "B" labour conditions above referred to), for railway equipment for the Canadian National Railway Company and the Canadian Pacific Railway Company, respectively:—

##### *Canadian National Railway Company's Orders:*

Canadian Car & Foundry Co., Ltd., Montreal, P.Q.:—

250 automobile cars

80 sand cars

The Eastern Car Co., Ltd., New Glasgow, N.S.:—

250 gondola cars

200 refrigerator cars

National Steel Car Corp. Ltd., Hamilton, Ont.:—

8 steel snow ploughs

150 automobile cars

Montreal Locomotive Works, Ltd., Montreal, P.Q.:—

5 Locomotives, northern type 4-8-4, class U-4-A

5 Locomotives, northern type 4-8-4, class U-2-D

Canadian Locomotive Works, Kingston, Ont.:—

5 Locomotives, Mikado type 2-8-2, class S-4-B

Canadian National Railway Car Shops:—

250 refrigerator cars.

##### *Canadian Pacific Railway Company's Orders:—*

Canadian Car & Foundry Co., Ltd., Montreal, P.Q.:—

40 box cars

National Steel Car Corporation Ltd., Hamilton, Ont.:—

100 steel hopper cars

170 gondola cars

150 refrigerator cars

#### DEPARTMENT OF INDIAN AFFAIRS

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

Contracts were awarded during September by the Department of Indian Affairs to Grant-Holden-Graham Ltd., Ottawa, Ont., for the manufacture of heavy flannel shirts and boy's and men's tweed trousers, which contracts contained the "B" labour conditions above referred to.

#### DEPARTMENT OF THE INTERIOR

##### *Contract in Group "A" (Construction, Remodelling, etc.)*

Erection of a Caretaker's Cottage at the Eastern Entrance to Jasper National Park, Alberta. Name of contractor, Mr. George MacKay, Edmonton, Alberta. Date of contract, September 18, 1935. Amount of contract, \$5,306. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Asbestos insulation workers.....	\$0 80	8
Blacksmiths.....	0 87½	8
Boilermakers—shop rate.....	0 70	8
Boilermakers—erection and installation.....	0 80	8
Brick and hollow tilayers and masons.....	1 00	8
Carpenters and joiners.....	0 75	8
Cement finishers.....	0 60	8
Concrete mixer operator—gas or elec.....	0 50	8
Derrick and hoist engineers—		
Electric and gas.....	0 50	8
1 drum.....	0 60	8
2 drum.....	0 90	8
Drill runners.....	0 55	8
Electricians.....	0 85	8
Firemen—stationary.....	0 45	8
Hollow metal workers—erectors.....	0 75	8
Kalamein iron workers—erectors.....	0 75	8
Labourers.....	0 45	8
Lathers, metal.....	0 75	8
Linoleum layers, waxers and polishers.....	0 60	8
Machinists.....	0 65	8
Marble setters and tile setters.....	1 00	8
Mastic floor layers—		
Spreaders and layers.....	0 90	8
Rubbers and finishers.....	0 75	8
Kettlemen.....	0 60	8
Motor truck drivers.....	0 45	8
Ornamental iron and bronze erect- ors.....	0 75	8
Painters and glaziers.....	0 75	8
Plasterers.....	0 90	8
Plasterers' helpers.....	0 55	8
Plumbers and steamfitters.....	1 05	8
Plumbers and steamfitters helpers.....	0 50	8
Powdermen.....	0 55	8
Roofers, slate and tile.....	0 80	8
Roofers, composite.....	0 80	8
Roofers, felt and gravel (man in charge).....	0 60	8
Sheet metal workers.....	0 75	8
Sheet metal workers' helpers.....	0 50	8
Steam shovel engineers.....	1 00	8
Steam shovel cranemen.....	0 90	8
Steam shovel firemen.....	0 50	8
Stonecutters.....	1 00	8
Structural steel erectors.....	0 80	8
Teamster, team and wagon.....	0 75	8
Teamster.....	0 45	8
Terrazzo layers.....	1 00	8
Terrazzo layers' helpers.....	0 60	8
Terrazzo Machine operators.....	0 70	8
Marble and tile-setters' helpers.....	0 60	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Erection of the Eastern Gateway Registration Building, Jasper National Park, Alberta. Name of contractor, Mr. George MacKay, Edmonton, Alberta. Date of contract, July 25,

1935. Amount of contract, \$8,960. The preceding fair wages schedule was also inserted in this contract.

#### DEPARTMENT OF MARINE

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Construction of a new quay wall to widen Pier No. 1 on the west side of Quebec Harbour, Quebec, P.Q. Name of contractors, Ogilvie Construction Co., Ltd., Montreal, P.Q. Date of contract, September 3, 1935. Amount of contract, \$734,202.73. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons.....	\$0 70	8
Cement finishers.....	0 50	8
Plasterers.....	0 70	8
Structural iron workers.....	0 65	8
Sheet metal workers.....	0 55	8
Hoist operators—gasoline.....	0 45	8
Hoist operators—steam.....	0 55	8
Roofers, felt and gravel.....	0 55	8
Roofers, sheet metal.....	0 45	8
Riggers.....	0 50	8
Blacksmiths.....	0 40	8
Blacksmiths' helpers.....	0 50	8
Carpenters.....	0 55	8
Electricians.....	0 50	8
Painters.....	0 50	8
Plumbers and steamfitters.....	0 55	8
Labourers.....	0 35	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 70	8
Drivers.....	0 35	8
Motor truck drivers.....	0 40	8

N.B.—In any cases where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Demolition of Shed No. 27, Quebec, P.Q. Name of contractors, L. G. Ogilvie & Co., Ltd., Montreal, P.Q. Date of contract, September 3, 1935. Amount of contract, \$5,500. The fair wages schedule shown immediately above was also included in this contract.

Construction of a machinery building at Quebec, P.Q. Name of contractor, Mr. Delphe Maranda, Quebec, P.Q. Date of contract, September 3, 1935. Amount of contract, \$97,458.25. The fair wages schedule shown above was also included in this contract.

Construction of a bituminous Macadam road for the diversion of Gilmour Hill, Wolfe's Cove, P.Q. Name of contractor, Ludger Lemieux, Ltd., Quebec, P.Q. Date of contract, September 3, 1935. Amount of contract, \$22,665.90. The fair wages schedule shown above was also included in this contract.

Repairs to wooden wharves at Pointe a Carcy, P.Q. Name of contractor, Mr. Amedee

Demers, Quebec, P.Q. Date of contract, September 13, 1935. Amount of contract, approximately \$85,000. The fair wages schedule shown above was also included in this contract.

Repairs to the concrete surface of Grain Elevator No. 2, Princess Louise Docks, Quebec, P.Q. Name of contractors, Concrete Repairs, Ltd., Montreal, P.Q. Date of contract, September 13, 1935. Amount of contract, approximately \$34,995.70. The fair wages schedule shown above was also included in this contract.

Reconstruction of Laurier Pier, Montreal, P.Q. Name of contractors, Atlas Construction Co., Ltd., Montreal, P.Q. Date of contract, September 3, 1935. Amount of contract, \$288,439. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per month and board	
<b>Dredge Crews—</b>		
Captain.....	\$200 00	customary hours
Engineer.....	200 00	"
Cranemen.....	150 00	"
Assistant cranemen.....	70 00	"
Fireman.....	65 00	"
Deck hands.....	55 00	"
Watchman.....	50 00	"
<b>Floating Derrick Crews—</b>		
Engineer.....	160 00	"
Assistant engineer.....	125 00	"
Fireman.....	65 00	"
Deck hands.....	50 00	"
Oilers.....	60 00	"
Dredge men.....	60 00	"

Teamster, team and wagon.....	0 75	8
Teamster.....	0 40	8
Labourers.....	0 40	8
Brushmen.....	0 50	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Dredging work in Harbour, Montreal, P.Q. Name of contractors, General Dredging Contractors, Ltd., Montreal, P.Q. Date of contract, September 3, 1935. Amount of contract, approximately \$1,000,000. The General Fair Wages Clause was inserted in the contract.

#### DEPARTMENT OF NATIONAL DEFENCE

*Contracts in Group "A" (Construction, Remodelling, etc.)*

Erection of a standard Radio Station at Fort Smith, N.W.T. Name of contractor, Mr. J. A. Buchanan, Edmonton, Alberta. Date of contract, September 21, 1935. Amount of contract, \$8,600.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers.....	\$0 90	8
Carpenters and joiners.....	0 70	8
Electricians.....	0 75	8
Hoist operators—gas.....	0 60	8
Labourers.....	0 45	8
Lathers—metal and wood.....	0 70	8
Motor truck driver and truck.....	1 50	8
Motor truck driver.....	0 50	8
Plasterers.....	0 90	8
Plumbers and steamfitters.....	0 75	8
Roofers—felt and gravel.....	0 60	8
Sheet metal workers.....	0 75	8
Stonemasons.....	0 90	8
Teamster, team and wagon.....	0 80	8
Teamsters.....	0 45	8
Painters.....	0 65	8
Cement finishers.....	0 65	8
Compressor operator.....	0 55	8
Concrete mixer operator.....	0 55	8

Re-wiring the Armoury at Cobourg, Ont. Name of contractors, Thos. J. Mitchell & Co., Cobourg, Ont. Date of contract, September 20, 1935. Amount of contract, \$2,249.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Electricians.....	\$0 65	8
Carpenters.....	0 60	8
Plasterers.....	0 80	8
Plasterers' helpers.....	0 40	8
Labourers.....	0 35	8
Motor truck drivers and truck.....	1 40	8
Motor truck drivers.....	0 40	8
Teamster, team and wagon.....	0 65	8
Teamster.....	0 35	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Insulation and built-up roofing on the Administration Building at Project No. 42, Barriefield, Ont. Name of contractors, Graves Bros., Kingston, Ont. Date of contract, Sept. 24, 1935. Amount of contract, \$2,900.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Man in charge of roofers.....	\$0 60	8
Sheet metal workers.....	0 65	8
Labourers.....	0 35	8

Installation of a heating system in the Armoury at Charlottetown, P.E.I. Name of contractors, Messrs. Currie & Murnaghan, Charlottetown, P.E.I. Date of contract, September 7, 1935. Amount of contract, \$4,750.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons.....	\$0 75	8
Carpenters and joiners.....	0 55	8

Cement mixer operator—steam.....	0 50	8
Carpenters.....	0 60	8
Sheet metal workers.....	0 70	8
Labourers.....	0 35	8
Motor truck driver.....	0 40	8
Motor truck driver and truck.....	1 40	8
Teamster, team and wagon.....	0 75	8
Teamster.....	0 35	8
Painters.....	0 55	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers is less than 48 per week, such lesser hours shall not be exceeded on this work.

#### CONTRACTS IN GROUP "B" (MANUFACTURE OF SUPPLIES, ETC.)

The following is a statement of contracts awarded by the Department of National Defence during the month of September, 1935, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Shrinking of Drill.....	Hughes & Co., Montreal, P.Q.
Avro tutor air frames.....	Armstrong Siddeley Motors Ltd. Ottawa, Ont.
Aeroplanes.....	Fairchild Aircraft Ltd., Longueuil, P.Q.
Aeroplanes.....	Canadian Vickers Ltd., Montreal, P.Q.
Seaplane.....	West Coast Salvage & Contracting Co., Vancouver, B.C.
Ankle Boots.....	A. E. Wry-Standard, Ltd., Amherst, N.S.
Ankle Boots.....	Acton Shoe Co., Acton Vale, P.Q.
Ankle Boots.....	Eudore Fournier, Plessisville, P.Q.
Cloth trousers.....	Houde Laroche Co., Ste. Croix, P.Q.
Cloth trousers.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Greatcoats.....	Workman Uniform Co., Ltd., Montreal, P.Q.
Shirts.....	Sterling Shirt & Overall Ltd., Cap de la Madeleine, P.Q.
Alterations to jackets.....	Woods Mfg. Co., Ottawa, Ont.
Service trousers.....	Yamaska Garments Ltd., St. Hyacinthe, P.Q.
Serge Jackets.....	Workman Uniform Co., Ltd., Montreal, P.Q.
Single circular tents.....	J. E. Roebuck, Midland, Ont.
Circular tents.....	Jones Tent & Awning Co., Ltd., Vancouver, B.C.
Braces.....	Russell Mfg. Co., St. Johns, P.Q.
Hand towels.....	Stauffer-Dobbie Ltd., Galt, Ont.
Sweater jackets.....	Regent Knitting Mills Ltd., Montreal, P.Q.
Sweater jackets.....	Mercury Mills Ltd., Hamilton, Ont.
Service shirts.....	Sterling Shirt & Overall Co., Cap de la Madeleine, P.Q.
Woollen mitts.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Insoles for rubber boots.....	Code Felt & Knitting Co., Ltd., Perth, Ont.

## POST OFFICE DEPARTMENT

*Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Post Office Department during the month of September, 1935, for various classes of manufactured supplies, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Metal dating stamps and type, brass crown seals, cancellers, etc.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Rubber stamps, daters, etc.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Letter carriers' uniforms.....	Neeldcraft Mills Ltd., St. Hyacinthe, P.Q.
Letter carriers' uniforms.....	Tayside Textiles Ltd., Perth, Ont.
Letter carriers' uniforms.....	Oxford Woollen Mills, Ltd., Oxford, N.S.
Mail bag fittings.....	F. W. Carling, Ottawa, Ont.
Mail bag fittings.....	Chas. A. Duff, Montreal, P.Q.
Mail bag fittings.....	Hamilton Cotton Co., Ltd., Hamilton, Ont.
Mail bag fittings.....	J. A. Mayer, Montreal, P.Q.
Mail bag fittings.....	Bell Thread Co., Ltd., Hamilton, Ont.
Stamping machines, etc.....	Machine Works Ltd., Montreal, P.Q.
Scales.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.

## PUBLIC WORKS DEPARTMENT

*Contracts in Group "A" (Construction, Re-modelling, etc.)*

Construction of a Customs and Immigration Building at Pacific Highway, B.C. Name of contractors, Messrs. Baynes & Horie, Vancouver, B.C. Date of contract, August 30, 1935. Amount of contract, \$33,102.00 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 60	8
Cement finishers.....	0 75	8
Stonemasons.....	1 10	8
Stonecutters (granite).....	1 00	8
Brick and hollow tile layers.....	1 10	8
Structural steel workers.....	1 00	8
Ornamental iron workers.....	0 75	8
Carpenters and joiners.....	0 80	8
Sheet metal workers.....	0 90	8
Roofers, felt and gravel.....	0 50	8
Lathers, metal.....	1 00	8
Plasterers.....	1 00	8
Plasterers' helpers.....	0 62½	8
Painters and glaziers.....	0 80	8
Plumbers and steamfitters.....	1 00	8
Electricians.....	1 00	8
Labourers.....	0 45	8
Teamster, team and wagon.....	1 00	8
Teamster.....	0 45	8
Motor truck driver.....	0 50	8

N.B.—Where, by agreement or current practice, the working hours of any class are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of Dyke No. 1, Sapperton Bar, Fraser River, New Westminster District, B.C. Name of contractor, Mr. Wm. Greenlees, Vancouver, B.C. Date of contract, August 28, 1935. Amount of contract, approximately \$11,740.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Labourers.....	0 45	8
Boorman.....	0 90	8
Bridgeman.....	0 90	8
Fireman.....	0 65	8
Derrick scow engineer.....	1 00	8
Derrickman.....	0 90	8

Construction of a public building at Rexton, N.B. Name of contractors, Messrs. Somers & Ramsay, Newcastle, N.B. Date of contract, August 26, 1935. Amount of contract \$9,232.00 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 40	8
Cement finishers.....	0 50	8
Stonemasons.....	0 70	8
Brick and hollow tile layers.....	0 70	8
Structural steel workers.....	0 65	8
Ornamental iron workers.....	0 50	8
Carpenters and joiners.....	0 50	8
Sheet metal workers.....	0 55	8
Roofers, felt and gravel.....	0 35	8
Lathers, metal.....	0 50	8
Plasterers.....	0 70	8
Plasterers' helpers.....	0 35	8
Painters and glaziers.....	0 50	8
Plumbers and steamfitters.....	0 55	8
Electricians.....	0 55	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 45	8
Driver, team and wagon.....	0 55	8
Teamsters.....	0 30	8
Motor truck drivers.....	0 35	8

Construction of a public building at St. Catharines, Ontario. Name of contractor, Mr. James R. Stork, St. Catharines, Ont. Date of contract, August 22, 1935. Amount of contract, \$41,350.70 and unit prices. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 50	8
Cement finishers.....	0 60	8
Stonemasons.....	0 90	8
Stonecutters.....	0 80	8
Brick and hollow tile layers.....	0 90	8
Structural steel workers.....	0 80	8
Ornamental iron workers.....	0 60	8
Hollow metal workers.....	0 70	8
Carpenters and joiners.....	0 70	8
Sheet metal workers.....	0 70	8
Roofers, felt and gravel.....	0 45	8
Terrazzo layers.....	0 70	8
Marble and tile setters.....	0 90	8
Lathers, metal.....	0 70	8
Plasterers.....	0 90	8
Plasterers' helpers.....	0 45	8
Painters and glaziers.....	0 60	8
Plumbers and steamfitters.....	0 75	8
Electricians.....	0 70	8
Labourers.....	0 40	8
Teamster, team and wagon.....	0 75	8
Teamster.....	0 40	8
Motor truck driver.....	0 45	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this contract.

Construction of a concrete Protection Wall, at Boucherville, P.Q. Name of contractors, A. Lacroix, Ltee, St. Lambert, P.Q. Date of contract, September 5, 1935. Amount of contract, approximately \$14,397.32. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoist engineer—steam.....	\$0 55	8
Hoist engineer—gas.....	0 45	8
Fireman.....	0 40	8
Concrete mixer operator.....	0 40	8
Blacksmith.....	0 45	8
Carpenters.....	0 50	8
Labourers.....	0 30	8
Driver, horse and cart.....	0 45	8
Driver, team and wagon.....	0 55	8
Drivers.....	0 30	8
Motor truck driver.....	0 35	8

Construction of a reinforcement of northern breakwater at Dingwall, Victoria Co., N.S. Name of contractor, Mr. Walter L. Ball, Cheticamp, N.S. Date of contract, September 19, 1935. Amount of contract, approximately \$32,230. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Boatmen.....	\$0 30	8
Hoist operator—gas.....	0 45	8
Hoist operator—steam.....	0 55	8
Labourers.....	0 30	8
Motor truck drivers.....	0 35	8
Driver, horse and cart.....	0 45	8
Driver, team and wagon.....	0 55	8
Machine drill operators.....	0 40	8
Drivers.....	0 30	8
Timbermen or cribmen (using such tools interchangeably as broad-axe, X-cut saw, hammer, adze, auger, etc.).....	0 37½	8

Construction of wharf repairs at Lower Caraquet, N.B. Name of contractor, Mr. Willard A. Smith, Saint John, N.B. Date of contract, August 24, 1935. Amount of contract, approximately \$18,752. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoisting engineer—steam.....	\$0 55	8
Hoisting engineer—gas or elec.....	0 45	8
Blacksmith.....	0 45	8
Labourers.....	0 30	8
Driver, horse and cart.....	0 45	8
Teamster, team and wagon.....	0 55	8
Teamsters.....	0 30	8
Motor truck drivers.....	0 35	8
Timbermen or cribmen (using interchangeably such tools as: broad-axe, X-cut saw, hammer, auger, adze).....	0 37½	8

Construction of an extension to the revetment wall and dredging in front thereof, Owen Sound, Ont. Name of contractors, Messrs. Wm. Bermingham & Son, Kingston, Ont. Date of contract, August 24, 1935. Amount of contract, approximately \$46,420.75. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Hoist engineer—gasoline.....	\$0 55	8
Hoist engineer—steam.....	0 65	8
Fireman.....	0 40	8
Concrete mixer operator.....	0 50	8
Diver.....	1 10	8
Timbermen or cribmen (using such tools interchangeably as broad-axe, hammer, X-cut saw, auger, adze).....	0 50	8
Labourers.....	0 40	8
Concrete finishers.....	0 60	8
Driver, team and wagon.....	0 75	8
Driver.....	0 40	8
Motor truck driver.....	0 45	8
Driver and motor truck, 1½ to 2 tons.....	1 45	8
Carpenters and joiners.....	0 70	8
Blacksmiths.....	0 55	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a public building at Rouyn, P.Q. Name of contractors, Hill-Clark-Francis, Ltd., Noranda, P.Q. Date of contract, September 9, 1935. Amount of contract, \$37,089.54 and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 45	8
Cement finishers.....	0 55	8
Stonemasons.....	0 70	8
Stone cutters.....	0 70	8
Brick and hollow tile layers.....	0 70	8
Structural steel workers.....	0 65	8
Ornamental iron workers.....	0 55	8
Hollow metal workers.....	0 55	8
Carpenters and joiners.....	0 60	8
Sheet metal workers.....	0 65	8
Man in charge roofers, felt and gravel.....	0 50	8
Terrazzo layers.....	0 70	8
Marble and tile setters.....	0 70	8
Lathers, metal.....	0 60	8
Plasterers.....	0 70	8
Painters and glaziers.....	0 55	8
Plumbers and steamfitters.....	0 65	8
Electricians.....	0 65	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 65	8
Drivers.....	0 40	8
Motor truck drivers.....	0 45	8

Completion of construction of a 1,200 foot section and the rectification of a 1,525 foot section of the rubble mound breakwater in Main Harbour North, Port Arthur, Ont. Name of contractors, Chambers, McQuigge & McCaffrey Co., Ltd., Toronto, Ont. Date of

contract, August 28, 1935. Amount of contract, approximately \$95,000.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per month with board	
Tug captains.....	*\$145 to \$180	
Chief Marine Engineer—Class 2.....	\$170 00

Powderman.....	0 55	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

A survey of office work for women was made in 7 cities in 1931 and 1932 by the Women's Bureau of the U.S. Department of Labour and the results have been published recently. This study was confined to certain types of offices—advertising agencies, banks, insurance companies, investment houses, mail-order houses, public utilities, and publishers. Data were obtained from personnel records, from pay-rolls, and by personal interviews. The median week's earnings for the group as a whole reporting earnings and occupation were \$24.60. Median earnings were highest (\$28.65) for the 840 secretaries. Next in rank were the medians for the 639 book-keepers, \$24.75; the 160 machine operators, \$24.55; the 707 clerks, \$24.05; and the 1,998 stenographers, \$23.65. Considerably below these amounts was the median for the 375 typists, \$20.90. The lowest for any group was \$19.85, for cashiers or tellers. Information was also published respecting hours and education and training.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

TORONTO, ONTARIO.—TORONTO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PHOTO ENGRAVERS UNION, LOCAL NO. 35.

Agreement to be in effect from June 1, 1935, to May 31, 1936, and thereafter from year to year until either party gives notice of change.

Only union members to be employed as photo engravers and foremen.

Hours: 40 per week, to be worked on six days or nights.

Overtime: time and one-half. For evening newspapers, work on Sundays and eight specified holidays, double time, and Saturday afternoons at time and one-half. On morning newspapers, Sundays and holidays to be worked at single time.

Minimum wages per week for photo engravers: \$55 for day work and \$58 for night work. (This is an increase of \$5 per week.) In weeks in which there is a holiday, the day's pay for such holiday to be deducted from the weekly wage for those who do not work on that day, except in the case of apprentices during their first three years.

Apprentices to serve 6½ years. One apprentice allowed to every seven journeymen who are on the day staff.

Wages for apprentices: from \$8 per week during first year to \$50 per week during first half of seventh year.

One week's notice to be given of discharge or of resignation.

Any dispute which may arise (except in the negotiation of a new agreement) is to be referred to a joint committee, and if they fail to agree, they will choose a disinterested party whose decision will be final and binding.

### Construction: Shipbuilding

VANCOUVER, B.C.—CERTAIN DRY DOCK AND SHIPBUILDING FIRMS AND THE BOILERMAKERS AND IRON SHIPBUILDERS' UNION OF CANADA, LOCAL NO. 1.

Agreement to be in effect from June 12, 1935, to June 12, 1936, and thereafter until 30 days' notice from either party.

Only union members to be employed, if available. No discrimination to be shown against any employee belonging to the union.

Hours: 8 per day, 44 per week for men on the day shift. For second shift (between 4.50 p.m. and 12.30 a.m.) 8 hours pay for 7½

hours' work. For third shift (between 12.30 a.m. and 8 a.m.) 9 hours pay for 7½ hours' work. For both second and third shifts, 40 hours to constitute a week's work. When second and third shifts for any employee do not last three nights or more, the time worked on these shifts will be paid at overtime rates.

Overtime: time and one-half for first four hours and double time thereafter. Double time for work on statutory holidays.

For work under certain difficult conditions, time and one-quarter to be paid.

Wages per hour: anglesmiths, boilermakers, electric welders, chippers and caulkers, riveters, shipfitters, drillers and tappers, 83 cents; acetylene welders and acetylene burners, 76 cents; holder-on, drilling out rivets, punch and shearmen, 70 cents; reamers and countersinkers, 65 cents, rivet heaters, 63 cents, ironworkers' helpers, 62 cents, passer boys over 21 years of age, 50 cents, passer boys, 42 cents.

### Quebec Collective Agreements Extension Act

The following agreements and amendments to agreements in the Province of Quebec have recently been made obligatory by Orders in Council and the terms so made obligatory are summarized in the article beginning on page 952 of this issue.

Barbers and Hairdressers, County of Portneuf.

Barbers and Hairdressers, St. Jérôme.

Barbers and Hairdressers, Joliette (Amendment).

Barbers and Hairdressers, Montreal (Amendment).

Bricklayers, Masons and Plasterers, Three Rivers (Amendment)

Quarrymen and Cut Stone Workers (other than Granite and Marble), Province of Quebec (Amendment).

Bakers, Montreal (Amendment).

Building Trades, Hull (Amendment).

Barbers, Saint Hyacinthe and Drummondville (Amendment).

Bakers, Hull (Amendment).

Barbers and Hairdressers, Three Rivers (Amendment).

Bakers, Three Rivers (Amendment).

### Industrial Standards Act of Ontario

The following schedules have been made binding by Order in Council and the terms summarized in this issue in the article beginning on page 955.

Bakers, Counties of Waterloo, Wellington, Perth and Huron.

Carpenters, Ottawa.

Painters, Ottawa.

Plasterers, Ottawa.

Plumbers, Ottawa.

Tile Setters, Toronto.

Painters, Hamilton.

Plumbers, Hamilton.

Plumbers, Port Arthur and Fort William

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the same industry or business and the same district, by Orders in Council, of two agreements which are summarized below and amendments to ten other Orders in Council which are also noted below. Notices of application for changes in agreements already in effect under Orders in Council have appeared in the *Quebec Official Gazette*, as follows: glove makers throughout the province in the issue of September 14, building trades at Montreal in the issue of September 21, bakers at Quebec, barbers at Quebec, and barbers at Shawinigan Falls and Grand'Mère in the issue of September 28. Corrections to applications already made for changes in Orders in Council were published in the issue of September 7, affecting barbers at Saint Hyacinthe and barbers at Three Rivers. Notice of application for the extension of an agreement affecting furniture workers throughout the province was published in the issue of September 14.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour

contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**BARBERS AND HAIRDRESSERS, COUNTY OF PORTNEUF.**—An Order in Council, approved September 19 and published in the *Quebec Official Gazette*, September 21, make obligatory the terms of an agreement (as amended with the approval of the parties) between Le Comité des Maîtres-Barbiers et Coiffeurs du Comté de Portneuf (the Master Barbers and Hairdressers' Committee of the County of Portneuf) and Le Comité des Employés-Barbiers du Comté de Portneuf (the Employed Barbers' Committee of the County of Portneuf).

The territorial jurisdiction comprises the County of Portneuf.

The agreement is in effect from September 21, 1935, to September 21, 1938, and until a new agreement comes into force.

The hours during which barber shops may be open vary from 78 to 88 hours per week according to locality.

Minimum wage rates for barbers and male hairdressers: \$10 per week plus 50 per cent of all receipts over \$20 taken in by the employee during the week; week-end employees \$3 per day. No employer may reduce the wage rate of employees who were being paid higher than these rates at the time the agreement was signed. For barbers and hairdressers who work on contract, piece work or by the job, minimum rates are set for each job. No agreement may be made to reduce the wage rates per hour or per job. No prize, object or service to be given to a customer which might lower the wage rates. Journeymen who on account of advanced age or due to infirmity cannot give the ordinary service, may work at lower wage rates if agreed to by the joint committee.

Apprentices to serve three years in a barber shop approved by the joint committee and must be paid a minimum of \$3 per week after six months' practice, \$5 after one year's practice, and \$7 after two years' practice.

**BARBERS AND HAIRDRESSERS, ST. JEROME.**—An Order in Council, approved September 19, and published in the *Quebec Official Gazette* September 21, makes obligatory the terms of an agreement between Le Syndicat des Maîtres-Barbiers Coiffeurs-Coiffeuses du district de

Saint Jérôme (the Master Barbers' and Hairdressers' Association of the District of St. Jérôme) and Le Syndicat des Employés Barbiers Coiffeurs-Coiffeuses du district de Saint-Jérôme (the Employed Barbers' and Hairdressers' Association of the District of St. Jérôme).

The territorial jurisdiction comprises Saint Jérôme, Saint Thérèse de Blainville, Saint Janvier, Sainte Rose, Shawbridge, New Glasgow, Terrebonne, Saint Canut, Saint Monique, Sainte Scholastique, and Sainte Sophie de la Corne.

The agreement is in effect from September 21, 1935, to September 21, 1938, and until a new agreement comes into force. With the consent of both parties, the joint committee may modify the agreement in the interests of the trade.

The hours during which barber shops and hairdressing parlours may be open total 77 per week. Every employed barber and men's hairdresser is entitled to six consecutive hours off each week except the weeks in which there is a holiday.

Overtime: All work outside regular hours for the shops to be paid at regular rate plus 35 cents per hour.

Minimum wages per week for barbers and men's hairdressers: \$12.50 plus 50 per cent of all receipts over \$20 taken in by the employee during the week; for female hairdressers \$12.50 per week. Extra employees 35 cents per hour. No employer may reduce the wages of an employee receiving more than the minimum rate at the time of the signing of the agreement. For work on contract or by the job, minimum rates are set for each job. Journeymen who, on account of advanced age or infirmity, cannot give the ordinary service, may work for lower wage rates, if arranged by the joint committee.

Apprenticeship to consist of six months at an approved school and a further year and one-half as an apprentice in a shop. The apprentice must also follow a special course for barbers and hairdressers for two years and obtain a certificate. Wages for apprentices \$5 per week after the period of six months at the school, \$8 after one year, and \$10 after 18 months.

**BARBERS AND HAIRDRESSERS, JOLIETTE.**—An Order in Council, approved September 6 and published in the *Quebec Official Gazette* September 7, modifies the Order in Council for these trades (LABOUR GAZETTE, August, page 731) by adding to the territorial jurisdiction the town of l'Assomption.

**BARBERS AND HAIRDRESSERS, MONTREAL.**—An Order in Council, approved August 30 and published in the *Quebec Official Gazette* September 7, makes certain changes in the Order in Council for these trades (LABOUR GAZETTE, July, page 630) among them the following:

The week's work for each worker remains at 55 hours per week, distributed between certain specified hours which total 68 hours per week, during which 68 hours, six consecutive hours per week must be allowed and one hour a day for noon meal and one-half hour for evening meal on Saturdays.

A worker of either sex carrying on the trades of barber or hairdresser, whether he

or she employs other persons or not, is subject to the same regulation as to hours whether he or she works personally in a public or private parlour.

The provision for payment for overtime of 45 cents per hour plus the regular rate is eliminated.

Any understanding or agreement between employers and workers as to the leasing of chairs, etc. which might decrease the minimum rate of wages is illegal.

**BRICKLAYERS, MASONS AND PLASTERERS, THREE RIVERS.**—An Order in Council approved August 30, and published in the *Quebec Official Gazette*, September 7, modifies the Order in Council and amendments for these trades (LABOUR GAZETTE, October, 1934, page 912, March, 1935, page 241 and August, 1935, page 733) as follows:

Contractor bricklayers, masons and plasterers hiring their personal services to any person, company, partnership, corporation, community, etc. either by the hour or on contract must never work for less than the journeymen's rate plus 10 cents per hour.

The wages for foremen bricklayers, masons and plasterers must equal the regular journeymen's rate plus 20 cents per hour.

**QUARRYMEN AND CUT STONE WORKERS (OTHER THAN GRANITE AND MARBLE) PROVINCE OF QUEBEC.**—An Order in Council, approved September 13 and published in the *Quebec Official Gazette* September 14, modifies the original Order in Council for this trade (LABOUR GAZETTE, April, page 322) as follows:

One apprentice allowed to each gang of five stonecutters and one to an incomplete gang engaged in each quarry or plant. Apprentices to serve four years.

**BAKERS, MONTREAL.**—An Order in Council, approved September 13 and published in the *Quebec Official Gazette*, September 14, modifies the original Order in Council for the agreement in this trade (LABOUR GAZETTE, August, page 731) as follows:

Bakeries which are outside the territorial jurisdiction of the agreement but who sell a part or the whole of their production within the territory are also governed by the Order in Council.

The limitation of the hours of work in the agreement does not apply to vendors or distributors but only to employees working inside the bakery.

Wages for employees working by the hour: 45 cents per hour.

**BUILDING TRADES, HULL.**—An Order in Council, approved September 13 and published in the *Quebec Official Gazette* September 14, makes certain additions to the Order in Council for building trades in Hull (LABOUR GAZETTE, March, page 240) as follows:

Painters are now included with the other building trades, at a wage rate of 65 cents per hour for qualified painters; apprentice painters from \$1 per day during first half of

first year to \$4.50 per day during second half of fourth year. One apprentice painter allowed to every five journeymen or fraction thereof.

Electricians are also included at a wage rate of 70 cents per hour for journeymen electricians; apprentice electricians from \$1 per day during first six months to \$5.50 per day during second half of fifth year. One apprentice electrician allowed to five journeymen.

In case of an individual labour contract whether for work by the job or otherwise, 80 cents per hour to be paid to journeymen painters and \$1 per hour to journeymen electricians.

Maintenance men, that is building trades workers who are employed throughout the year by the same employer, including those employed in churches, educational and charitable institutions, etc., manufacturing establishments, hotels, public or office buildings, apartment buildings or dwelling houses are to be paid as follows: within the city of Hull and a radius of 10 miles from its limits \$22 per week for skilled workmen and \$17 for unskilled workmen (labourers); beyond the radius of 10 miles from the city of Hull, skilled workmen \$20 per week and unskilled workmen (labourers) \$15 per week. Hours for maintenance men 48 per week without a daily limitation of hours. Any overtime to be paid according to the regular wage rate for the trade. The employer may charge a maximum of \$3 per room per month and of 25 cents per meal if the employee rooms or boards in the establishment.

**BARBERS AND HAIRDRESSERS, ST. HYACINTHE AND DRUMMONDVILLE.**—An Order in Council, approved September 26 and published in the *Quebec Official Gazette*, September 28, modifies the Order in Council for these trades (LABOUR GAZETTE, July, page 631) as follows:

Work done outside the specified hours by a regular or part time workman is prohibited except to complete work begun before closing time for a customer. Any ladies' hairdresser who to complete such work must work after half past nine o'clock, must be paid at the rate of 50 cents per hour. A change is also made in the rate paid for one piece of work in the piece rates.

**BAKERS, HULL.**—An Order in Council, approved September 26 and published in the *Quebec Official Gazette* September 28, modifies the Order in Council for this trade (LABOUR GAZETTE, June, page 531) as follows:

Paragraph (f) of Article II is replaced by the following:

"(f) Master-bakers employing less than two men shall not be entitled to any apprentices in their service. Masters employing two or more men shall be entitled to only one apprentice. If such apprentice has not had two years' experience, his weekly wage shall be at least \$6 and if he has more than two years' experience at least \$12."

The following paragraph is added after Article II (h):

"(i) To be entitled to the wages of first baker, the master baker must work at least 40 hours in his bakery and be holder of a certificate of competency."

**BARBERS AND HAIRDRESSERS, THREE RIVERS.**

—An Order in Council, approved September 26, and published in the *Quebec Official Gazette*, September 28, modifies the original Order in Council for this industry (LABOUR GAZETTE, July, page 631) as follows:

Changes are made in the job work rates for two pieces of work.

It is provided that in the town of Cap de la Madeleine and in Pointe du Lac a lower wage scale may be paid, that is the minimum rate for barbers and male hairdressers to be \$12.50 per week plus 50 per cent of all receipts over \$25 taken in by the employee in the week, or \$15 per week without percentage; the rate for female hairdressers is \$12.50 per week.

No employer may reduce the wages of any employee receiving more than the minimum rates at the time the Order in Council was published in the *Quebec Official Gazette*.

Rates are also specified for contract, piece or job work for these municipalities which are lower than the rates in Three Rivers and the rest of the territory covered by the agreement.

A sub-committee to be formed to supervise the carrying out of the agreement in Cap de la Madeleine, this sub-committee to report its activities to the Joint Committee.

**BAKERS AND BREAD AND CAKE DISTRIBUTORS, THREE RIVERS.**—An Order in Council, approved September 26 and published in the *Quebec Official Gazette* September 28, modifies the previous Order in Council for this industry (LABOUR GAZETTE, February page 148, amendment May, page 426) as follows:

The dates between which the rate of \$9 per week with 7 per cent commission on money collected, for distributors of bread, cake and pastry, are changed to be from June 1, 1935, to November 30, 1935.

The wages of bakers, distributors of bread, cake and pastry and apprentices to be paid weekly.

The indemnity paid to railroad employees in the United States injured in accidents growing out of their employment averaged \$645 in 1932. This was the average award in 18,699 cases closed out with payments. For minor disabilities these workers received an average of \$173, for major disabilities \$4,473, and for death \$4,561. Minor disabilities comprised 89 per cent of the total number of accidents. Train accidents were compensated for at a considerably higher rate than for all types at a considerably higher rate than non-train accident and modes of settlement combined. For death cases, the indemnity in train accidents averaged \$5,306 as compared with \$2,950 in non-train accidents. Nearly 80 per cent of all the cases closed with payment in 1932 came under the Federal Employers' Liability Act.

## INDUSTRIAL STANDARDS ACT OF ONTARIO

### Agreements Recently Approved by Orders in Council

**T**HE Industrial Standards Act of Ontario, the text of which was printed in the *LABOUR GAZETTE*, June, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July issue of the *LABOUR GAZETTE*, summaries are given in this article of the schedules which have thus been approved.

**BAKERS AND BAKERY SALESMEN OR BREAD DRIVERS, COUNTIES OF WATERLOO, WELLINGTON, PERTH AND HURON.**—By an Order in Council dated September 11 and published in *The Ontario Gazette* September 14, a schedule of wages and hours of labour is in effect for all those engaged in the bakery industry in the counties of Waterloo, Wellington, Perth, and Huron.

The schedule is in effect from September 24, 1935, to August 1, 1936.

Hours: 56 per week.

Minimum wage rates per week: foremen, \$22, oven men and table hands \$20, bakers' helpers \$15, pan boys or apprentices \$10, salesmen or bread drivers \$17. The Board to have the authority to define these categories. No change to be made in the wages of employees receiving higher wages than the above schedule.

**CARPENTERS, OTTAWA.**—An Order in Council dated September 11 and published in *The Ontario Gazette* September 14, makes binding a schedule of wages and hours of labour on all those engaged in the carpentry trade on build-

ing and construction work, within a zone which includes the city of Ottawa and surrounding district.

The schedule is in effect from September 24, 1935, to May 31, 1936.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for regular hours. For shift work, 8 hours per day for 5 days per week. Employees required for emergencies or in connection with the pouring of concrete on Saturdays may work and may be paid straight time for Saturday afternoon.

Overtime: from 5 p.m. to 10 p.m. on first five days of the week and from noon to 5 p.m. on Saturdays, time and one-half. Overtime after 10 p.m. of the first five days of the week, double time. No overtime after 5 p.m. on Saturdays. Work on Sundays and four specified holidays, double time.

Wages for carpenters and joiners: 70 cents per hour. Work contracted for and accepted prior to August 13, 1935, of which due notice has been given to the Board on or before August 30, 1935, to be completed at a rate set by the Board. A rate of wages for aged or handicapped employees may be determined by the Board.

Apprentices to be governed by the Ontario Apprenticeship Act.

**PAINTERS, OTTAWA.**—An Order in Council dated September 11 and published in *The Ontario Gazette* September 14, makes binding a schedule of wages and hours of labour on all those engaged in the painting, paperhanging, decorating and glazing trade in a zone which includes the city of Ottawa and surrounding district.

The schedule is in effect from September 24, 1935, to August 14, 1936.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. When necessary work cannot be done during the day, such work may be done as night shifts of not more than 8 hours each at straight time.

Overtime at time and one-half with not more than one hour's overtime in any one working day. Work on Sundays and Christmas day, double time. Work on six other specified holidays, time and one-half. No work on Labour Day.

Wages per hour for spray painters: from August 14, 1935, to February 14, 1936, 75 cents; from February 14, 1936, to August 14, 1936, 80 cents. Wages per hour for painters, paperhangers, decorators and glaziers, from August 14, 1935, to February 14, 1936, 60 cents; from February 14, 1936, to August 14, 1936, 65 cents. All work contracted for and accepted prior to August 14, 1935, of which due notice has been given to the Board on or before August 30, 1935, may be completed at a rate approved by the Board. The Board may set a rate less than the regular rate for aged and handicapped workers.

Apprentices to be governed by the Ontario Apprenticeship Act.

**PLASTERERS, OTTAWA.**—By an Order in Council dated September 11 and published in *The Ontario Gazette* September 14, a schedule of wages and hours of labour is in force for all

those engaged in plain and ornamental plastering in interior work and exterior work, in a zone which includes the city of Ottawa and surrounding district.

The schedule is in effect from September 24, 1935, to August 12, 1936.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Shifts to work at any time of the day or night between 1 a.m. Monday and midnight Friday. Foremen or men in charge on the job may work two hours per day longer than the regular hours.

In the case of emergency, consent may be given to work after regular hours by arrangement with the Board.

Overtime: time and one-half. All work on Sundays and three specified holidays, double time. No work on Labour Day.

Wages for plasterers: 80 cents per hour. All work contracted for and accepted prior to August 12, 1935, of which due notice has been given to the Board on or before August 30, 1935, may be completed at a rate set by the Board. For aged or handicapped employees, a rate of wages may be determined by the Board.

Apprentices to be governed by the Ontario Apprenticeship Act. No employer may employ more than one apprentice who is serving his first two years of apprenticeship and one apprentice who is serving his third or fourth year of apprenticeship, at one time.

**PLUMBERS, OTTAWA.**—By an Order in Council dated September 11 and published in *The Ontario Gazette*, September 14, a schedule of wages and hours of labour is in force for all those engaged in the plumbing, steamfitting, hot water heating, gas fitting and the installation of all pipe work and fitting, but not including sprinkler fitting, in a zone which includes the city of Ottawa and surrounding district.

The schedule is in force from September 24, 1935, to May 31, 1936.

Hours: 8 per day on the first five days of the week, a 40-hour week. No men will be employed for more than 40 hours per week without the sanction of the Board. To finish a repair job on regular working days, if to finish same will not take more than one hour, it will be done at the regular rate of wages. If men are required for emergency work, the setting of sleeves and inserts on Saturday morning, same may be done at the rate of single time with a minimum of one hour's pay. For night work or shift work, 8 hours pay for 7 hours' work.

Overtime: time and one-half. Saturdays (except as provided above), Sundays and eight specified holidays, double time.

Wages for journeymen: 75 cents per hour until December 1, 1935, and 80 cents thereafter; except that all work contracted for and accepted prior to August 12, 1935, of which due notice has been given to the Board on or before August 20, 1935, may be completed at a rate set by the Board. Wages for fifth year junior mechanics 55 cents until December 1 and 60 cents thereafter. A rate of wages may be determined by the Board for aged or handicapped workers.

One junior mechanic allowed on any job to each branch of the trade except when there are

more than five journeymen plumbers or five journeymen steamfitters employed when the following ratio allowed: two to six men, three to eleven men and four to sixteen men. All apprentices to be employed in accordance with the Ontario Apprenticeship Act.

**TILE SETTERS AND TILE SETTERS' LABOURERS, TORONTO.**—By an Order in Council dated September 11 and published in *The Ontario Gazette*, September 14, a schedule of wages and hours of labour is in force for all those engaged in the plain and decorative tile industry who use tile of ceramic or clay products for the building industry, in a zone which includes the city of Toronto and surrounding district.

The schedule is in effect from September 24, 1935, to August 29, 1936.

Hours: 8 per day or shift, 40 hours per week for tile setters. Tile setters' labourers may work one hour per day longer than tile setters at straight time.

For shift work when overtime shifts equal at least 66⅔ per cent of the regular shift, 8 hours' pay for 7 hours' work. When work cannot be done during the day, such work may be done as a night shift of not more than 8 hours at straight time.

Overtime: time and one-half. Work on Saturdays, Sundays and eight specified holidays, double time.

Minimum wage rates: tile setters 90 cents per hour, tile setters' labourers 50 cents per hour. All work contracted for and accepted prior to August 29, 1935, of which due notice has been given to the Board on or before September 25, 1935, may be completed at a rate to be approved by the Board. A rate of wages for aged or handicapped employees may be determined by the Board.

Apprentices to be governed by the Ontario Apprenticeship Act.

**PAINTERS, HAMILTON.**—By an Order in Council dated September 11 and published in *The Ontario Gazette*, September 14, a schedule of wages and hours of labour is in force for all those engaged in the painting, paperhanging and glazing industry in a zone which includes the city of Hamilton and surrounding district.

The schedule is in effect from September 24, 1935, to August 22, 1936.

Hours: 8 per day for the first five days of the week, 40 hours per week. In emergencies, the Board may permit two hours' work on Saturday at straight time. Where work cannot be done during the day, such work may be done as a night shift of not more than 8 hours, with 9 hours' pay for 8 hours' work.

Overtime: time and one-half. Work on Sundays and five specified holidays, double time. No work on Labour Day.

Minimum wages for spray painters: 90 cents per hour. Wages for painters, paperhangers, decorators and glaziers 60 cents per hour until May 1, 1936, and 65 cents thereafter. All work contracted for and accepted prior to August 22, 1935, of which due notice has been given to the Board on or before September 15, 1935, may be completed at a rate to be approved by the Board. The Board may set a rate less than

the above minimum for aged and handicapped workers.

Apprentices to be governed by the Ontario Apprenticeship Act.

**PLUMBERS, HAMILTON.**—By an Order in Council dated September 11 and published in *The Ontario Gazette*, September 14, a schedule of wages and hours of labour is in force for all those engaged in the plumbing, steam-fitting and hot water heating, gas fitting and the installation of all pipe work and fittings, but not including sprinkler fitting, in a zone which includes the city of Hamilton and surrounding district.

The schedule is in effect from September 24, 1935, to August 23, 1936.

Hours: 8 per day for the first five days of the week, a 40-hour week, and no men to be employed more than 40 hours per week except with permission of the Board. If necessary to work at night only or shift work on any job, 8 hours' pay for 7 hours' work. If men required for emergency work, the setting of sleeves and inserts on Saturday morning, it can be done at straight time, with a minimum of two hours' single time. In finishing up a repair job on regular working days, if to finish will not take more than one hour, it may be worked at straight time.

Overtime: time and one-half; Saturdays (not otherwise provided for), Sundays and eight specified holidays, double time.

Minimum wage rates for journeymen: 80 cents per hour; fifth year junior mechanics 55 cents. Work contracted for and accepted prior to August 23, 1935, of which due notice has been given to the Board on or before September 15, 1935, may be completed at a rate approved by the Board. The Board may set a rate less than the above for aged or handicapped workers.

One junior mechanic to be allowed on any job to each branch of the trade, except when there are more than five journeymen plumbers or five journeymen steamfitters when the ratio allowed will be: two to six men, three to eleven men, and four to sixteen men.

Apprentices to be employed according to the Ontario Apprenticeship Act.

**PLUMBERS, PORT ARTHUR AND FORT WILLIAM.**—By an Order in Council, dated September 26 and published in *The Ontario Gazette* September 28, a schedule of wages and hours of labour is in force for all those engaged in the plumbing, steamfitting and hot water heating, gas fitting and the installation of all pipe work and fittings but not including sprinkler fitting, in a zone which includes the cities of Port Arthur and Fort William and surrounding district.

The schedule is in effect from October 8, 1935, to September 16, 1936.

Hours: 8 per day for the first five days of the week, and no men to be employed for more than 40 hours per week except with permission of the Board. If required for emergency work, the setting of sleeves and inserts on Saturday morning, same can be done at single time rate, with a minimum of two hours' pay. In finishing up a repair job on regular working days, if to finish will not take more than one hour's time, it will be done at the regular rate.

Minimum rate of wages for journeymen: 90 cents per hour. Minimum rate for fifth year junior mechanics: 60 cents per hour. All work

contracted for and accepted prior to September 16, 1935, of which due notice has been given to the Board on or before October 15, 1935, to be completed at a rate set by the Board. A rate of wages may be determined for aged or handicapped employees.

Overtime: time and one-half. Saturdays (not otherwise provided for), Sundays and seven specified holidays, double time.

One junior mechanic allowed on any job to each branch of the trade except when there are more than five journeymen plumbers or five journeymen steamfitters employed, when two junior mechanics may be employed to six journeymen, three to eleven, and four to sixteen.

All apprentices to be employed according to the Ontario Apprenticeship Act.

### New Labour Organizations in Canada

The following labour organizations have been chartered recently by the Trades and Labour Congress of Canada:

Federal Labour Union, No. 58, Cabano, Que., Pres., Gaspard T. England, Cabano, Que. Sec., George Pelletier, Cabano, Que.

Optical Workers Federal Labour Union, No. 71, London, Ont. Pres., V. G. Biggs, 273 King St., London, Ont. Sec., Everett McLaren, 56 Thornton Ave., London, Ont.

Windsor Police Association, No. 79.—President, Reginald Parker, 976 Langlois St., Windsor, Ont. Recording secretary, William A. Jastings, 175 Partington Ave., Sandwich, Ont.

Windsor Civic Workers' Union, No. 82.—President, Albert Johnson. Corresponding secretary, care of P. Fisher, 1661 Fraser Ave., Windsor, Ont.

The following new organizations have been chartered recently by the All-Canadian Congress of Labour:

New Brunswick Council of Labour.—President, Ronald J. Harrington, Saint John, N.B. Legislative Secretary, Frank H. Gillespie, 64 Pine St., Moncton, N.B.

Canadian Federation of Musicians, Canadian Clef Club, Local No. 11.—President, S. Flood, Montreal, Que. Secretary-Treasurer, I. Seely, 1188 St. Antoine St., Montreal, Que.

National Union of Operating Engineers, Montreal Local.—President, T. Prezeau, Montreal, Que. Secretary-Treasurer, G. A. Mayrand, 870 Demontigny St., E., Montreal, Que.

Canadian Printers' Union, Ottawa Local No. 2. President, R. H. Quirk, Ottawa, Ont. Secretary-treasurer, Lorne Duck, 82 Daly Ave., Ottawa, Ont.

Canadian Federation of Musicians, Winnipeg Association of Musicians, Local No. 12.—Acting secretary, Frederick Lea, 279 Beaverbrook St., Winnipeg, Man.

Canadian Printers' Union, Winnipeg Newspaper Printers' Association, Local No. 3.—President, E. G. Smith, Winnipeg, Man. Secretary-treasurer, Peter F. Weir, 612 Rosedale Ave., Winnipeg, Man.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1935

### Cost of Living, Prices of Staple Articles and Index Numbers

THE cost of the weekly family budget in terms of retail prices was little changed from the level of the previous month, none of the three main groups of expenditure showing appreciable change, while the Dominion Bureau of Statistics' index number of wholesale prices was about one per cent higher.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.74 at the beginning of September as compared with \$7.73 for August; \$7.46 for September, 1934; \$7.24 for September, 1933; \$11.64 for September, 1929; \$10.94 for September, 1926; \$11.82 for September, 1921; and \$7.83 for September, 1914. The most important advances during the month occurred in the cost of bacon, lard, eggs and butter, while the cost of potatoes was considerably lower with less important declines in beef and mutton. Including the cost of fuel and rent with that of foods the total budget was \$16.16 at the beginning of September as compared with \$16.15 for August; \$15.87 for September, 1934; \$15.41 for June, 1933 (the low point in recent years); \$21.90 for September, 1929; \$21.15 for September, 1926; \$22.37 for September, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.33 for September, 1914. In fuel a slight seasonal advance occurred in the price of anthracite coal. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was about one per cent higher at 72.3 for September as compared with 71.6 in August. The advance was due in large part to higher prices for grains, raw silk, copper, zinc and eggs. Comparative figures for certain previous dates are 72.0 for September, 1934; 63.5 for February, 1933 (the low point in recent years); 97.8 for September, 1929; 98.5 for September, 1926; 164.5 for May, 1920 (the post war peak); and 67.2 for September, 1914.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may

be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

#### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expendi-

(Continued on page 966)

# COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

birch. p Six-roomed houses not extensively occupied by workmen but some at \$35-\$50, according to condition and conveniences. r Mining company houses in district \$5-\$10 per month; others, five and six rooms, \$10-\$35. s Delivered from mines.

(Continued from page 958)

ture for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

#### Retail Prices

Beef prices in September continued the decline which commenced in July. Sirloin steak was down in the average from 25 cents per pound at the beginning of August to 24·6 cents in September and shoulder roast from 13·3 cents per pound in August to 12·8 cents in September. Mutton averaged ½ cent per pound lower at 21·1 cents. The price of fresh pork again averaged higher, being 23·1 cents per pound in September as compared with 22·7 cents in August. Bacon also was higher in most localities, the Dominion average being up from 30·5 cents per pound in August to 31·8 cents in September. Lard advanced from 15·9 cents per pound to 17·2 cents.

Egg prices were generally higher, fresh advancing from 27·7 cents per dozen in August to 31·2 cents in September and cooking from 23·7 cents per dozen to 26·4 cents. Prices were lower in the prairie provinces than in other parts of the Dominion. Creamery butter rose from an average price of 25 cents per pound in August to 25·4 cents in September. A substantial seasonal fall occurred in the price of onions in practically all localities, the Dominion average being down from 6·1 cents per pound to 4·2 cents. Potato prices were considerably higher in most localities in the maritime provinces but lower in other provinces, particularly the cities on the prairies. The Dominion average price was down from \$1.24 per ninety pounds in August to 99 cents in September. Cooking apples declined from 28·8 cents per gallon to 21·1 cents. Increases in the price of United States' anthracite coal were reported from several cities and the average price advanced 10 cents per ton to \$14.40.

No changes were reported in rent.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$14.50; Charlottetown, \$13.40; Moncton, \$16; Saint John, \$13.50; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; Montreal, \$14.25; Ottawa, \$15.25; Kingston, \$14.50; Belleville, \$14.50; Peterborough, \$16.50; Oshawa, \$14.25; Toronto, \$14.50; St. Catharines, \$14.50; Hamilton, \$13.50; Brantford, \$16.75; Galt, \$16.50; Windsor, \$12.50; Sudbury, \$17.50; Cobalt, \$19; Timmins, \$18; Fort William, \$16; Port Arthur, \$16; Winnipeg, \$19.50.

#### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

## INDEX NUMBERS OF WHOLESALE PRICES IN CANADA CALCULATED BY THE DOMINION BUREAU OF STATISTICS

Average Prices in 1926=100

\*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

Grain prices were mostly higher during September. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, advanced during the first three weeks of the month and then declined considerably before the end. The average price for the month was 90.3 cents per bushel as compared with 84.5 cents in August. Unfavourable crop conditions in the Argentine and war rumours in Europe were said to be factors in the movement. In coarse grains rye advanced from 36.5 cents per bushel in August to 40.5 cents in September; barley from 33.9 cents per bushel to 35.8 cents and flax from \$1.278 per bushel to \$1.364. Flour prices moved upward reflecting higher wheat prices. Quotations, at Montreal advanced from \$5.30 per barrel to \$5.70. Granulated sugar at Montreal was down from \$4.90 per hundred pounds to \$4.71. Raw rubber at New York declined from an average price of 12.1 cents per pound in August to 11.8 cents in September. In Livestock the price of choice steers at Toronto advanced from \$6.55 per hundred pounds to \$6.80 but at Winnipeg declined from \$5.39 per hundred pounds to \$4.76. Bacon hogs were lower at both Toronto and Winnipeg, the price on the former market declining from

\$9.92 per hundred pounds to \$9.38, and on the latter from \$9.14 to \$8.46. The price of lambs at Toronto was down from \$7.25 per hundred pounds to \$6.88. Creamery butter at Montreal rose from an average price of 22.6 cents per pound in August to 24.7 cents in September, and at Toronto from 22.8 cents per pound to 24.3 cents. Storage holdings were said to be considerably greater at the beginning of September than at the same date last year. The price of eggs was substantially higher, quotations at Montreal being up from an average of 30.4 cents per dozen in August to 36.4 cents in September and at Winnipeg from 26.8 cents per dozen to 32.1 cents. Raw cotton at New York was down from an average price of 11.5 cents per pound to 10.9 cents, this in spite of the unexpectedly low estimate of the crop. Raw silk prices continued to advance, a grade at New York being \$1.86 per pound on September 15 as compared with \$1.79 on August 15 and \$1.09 on September 15, 1934. Electrolytic copper at Montreal was up from \$8.68 per hundred pounds to \$9.13. The price in September, 1934 was \$7.30 per hundred pounds.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries. The following notes afford information as to recent changes in prices according to groups of commodities in several of these countries.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1930=100, was 88·4 for August, an increase of 0·5 per cent for the month. The chief advance in the month was one of 6·1 per cent in cereals.

The *Statist* index number, on the base 1867-1877=100, was 84·1 at the end of August, a decrease of 0·2 per cent for the month. Foods were slightly higher due to an increase of 2·8 per cent in the animal food group. Industrial materials were slightly lower, showing a decrease of 2·2 per cent in minerals principally due to a fall in the price of tin.

**COST OF LIVING.**—The Ministry of Labour's index number, on the base July 1914=100, was 143 at the end of August, showing no change for the last two months. Very slight decreases were shown in the food group due to a seasonal decline in the price of potatoes and to lower prices for bacon; but higher prices were recorded for eggs and butter. The clothing group also was slightly lower than the previous month.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold index) was 70 for August, a rise of 2·9 per cent for the month. Increases were recorded in all groups except vegetable foods, the sugar, coffee and cocoa group and textiles.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 102·4 for August, an advance of 0·6 per cent for the month. Agricultural products were higher due to the increase in prices of animal foods. Among industrial materials, the only substantial change was an advance of 3 per cent in the non-ferrous metals.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 124·5 for August, an increase of 0·2 per cent for the month. Slight increases were recorded in all groups except rent which was unchanged.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 80·5 for August, a rise of 1·4 per cent for the month. This is the highest level reached since November, 1930. Increases over the July level were shown in seven groups, while the other three, fuel and lighting materials, chemicals and drugs and miscellaneous commodities were lower.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is the sum total of the prices per pound of 96 commodities of common consumption was \$10.0085 at September 1, an advance of 0·9 per cent for the month due to increases in prices of livestock, provisions, textiles and coal and coke.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the cost *per capita* of a year's supply of commodities was \$170·859 at September 1, a decline of 0·38 per cent for the month, due to declines in the prices of breadstuffs, dairy and garden produce and miscellaneous commodities.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 138·7 for August, an increase of one per cent for the month, caused by the advance in the food, shelter and fuel and light groups. Clothing was lower and sundries unchanged for the month.

The Bureau of Labour Statistics index number, on the base 1913=100, was 140·2 at July 15, a decrease of 0·1 per cent from the March 15 level. Advances in the prices of foods, housefurnishings and in rent were offset by declines in fuel and light, clothing and miscellaneous commodities.

(a) Average for year. (b) First of month. (c) Middle of month until August, 1933; thereafter this index number is calculated fortnightly and the figure given in this table is for the date nearest to the middle of the month. (d) Cost of weekly family food budget. (e) Figure for previous month. (f) Figure for following month. (g) Quarter beginning in specified month. (h) Highest category workmen's household. (i) December. (j) To end of 1931, 13 articles; from 1932, 34 articles.

TABLE II.—INDEX NUMBERS OF WHOLESALE PRICES IN CANADA AND CERTAIN OTHER COUNTRIES

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month. (e) New series. (f) Sum total of the prices per pound of 96 articles of common consumption. (g) Until end of 1927, "Dr. Lorenz." (h) Prior to 1926, number of commodities was 236. (i) Paper currency basis; index number on pre-war currency suspended from April, 1933. (j) Continued by Dun and Bradstreet, Incorporated.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Accident Liability of Employer—Car Owned by Servant in Master's Employment

A salesman in the employ of a company was driving his own car by an arrangement under which the company made him certain allowances for depreciation and oil and gas in lieu of railway fare.

While returning in his car to keep an appointment with the sales manager of the company, he ran into and killed a man who was helping to unlock two cars which had collided. The fatal accident occurred on a section of highway obscured by smoke from a prairie fire.

When the case came before the Court of King's Bench, Manitoba, it was held that the primary cause of the accident was the rate of speed at which the salesman was driving under the circumstances.

The plaintiff (the widow of the accident victim) sued the defendant and his employers for damages for the death of her husband whom she claimed was killed by the defendant negligently running his automobile upon the deceased.

It was held by the Court that "where a servant owns an automobile which, by arrangement with his master, he uses in the ordinary course of his employment by the master, and while it is being so used and driven by the servant the automobile causes the death of a person, the master will be liable in damages to the estate of such person, if the death be caused by the negligence of the servant."

Damages of \$10,000 in all were awarded—\$6,000 to the widow; \$1,500 to the older son; and \$2,500 to the younger son.

*Drulak v. Harvey and General Steel Wares Limited* (1935) 3 *Western Weekly Reports*, 65.

### Restaurant not a "Trade" within the meaning of Male Minimum Wage Act, 1934, British Columbia

An appeal was brought in the Supreme Court of British Columbia against a conviction by a magistrate for violation of the Male Minimum Wage Act, 1934, ch. 47, charging that the appellant, an employer within the meaning of said Act did unlawfully contravene Order 10 of the Board of Industrial Relations, fixing the minimum wage in the mercantile industry, by the payment of wages to the plaintiff of less amount than the minimum wage as fixed by the Order.

The appellant was the owner of and operated a business in Vancouver variously referred to in the evidence as a coffee shop, restaurant, lunch-counter and tea-room business. In con-

nection with these activities the appellant maintained a soda fountain and ice-cream service, and sold candies and cigarettes. The plaintiff was employed in the capacity of manager. He was in charge of the place in the evenings, made up the accounts for the day, assisted in the cooking and serving of the food, waited on customers, etc.

On behalf of the appellant it was contended that the business conducted by the appellant was not a "mercantile industry" within the meaning of Order No. 10; and that the plaintiff was not an employee within the meaning of the Male Minimum Wage Act.

In the judgment it was held that the restaurant business operated by the appellant was not a trade within the meaning of the Order and the fact that candies, cigarettes, and tobacco were sold incidentally to the restaurant business did not bring the business within the definition of "trade."

The conviction having been quashed on the first point, the second point was not passed upon.

*Rex v. Brearly*, British Columbia, (1935) 3 *Western Weekly Reports*, 63.

### Liability of Employer for Employee's Injury From Use of Defective Equipment

The plaintiff, a shoe salesman, fell from a step ladder while attempting to get a box of shoes for a customer. The ladder was found to have been defective.

In the resulting action before the Court of King's Bench, of Manitoba, the plaintiff claimed that as a result of the injuries he sustained he would, throughout the balance of his lifetime, be an invalid requiring a large amount of medical care and attention. He claimed special damages for medical services amounting to \$50 and general damages in the sum of \$30,000.

Medical evidence presented, however, showed that the plaintiff had been suffering for many years with *spondylitis deformans*, resulting in rigidity of the spine. He also had arthritis of years' standing.

It was also brought out in evidence that during his illnesses from these ailments plaintiff had been attended and looked after by a nurse in the employ of the defendant.

The Chief Justice, in giving judgment, found that "the ladder was unquestionably defective," and that "the plaintiff could see for himself its condition." On the other hand, "the defendant knew of the physical condition of the plaintiff and the dangers to which he was subjected in the use of the ladder."

Continuing, the Chief Justice stated: "The accident which befell the plaintiff had a trifling effect compared to his permanent infirmities, from which he was suffering long prior to the accident, and becoming more advanced as time passed on. He was bruised by the fall, and suffered pain as a consequence, but the damages to which he is entitled as a result must be very small in comparison with his demands. I am satisfied that in five or six weeks from the date of the accident he would recover completely from the pain and incapacity resulting therefrom, and that the accident would not of itself add to his troubles after the expiration of that time."

The Court therefore held that the defendant was negligent and liable for the damages resulting therefrom, but that the plaintiff's general serious physical defects were not attributable to the accident.

Judgment was given in favour of the plaintiff for damages to the amount of \$400 together with costs on the county court scale.

*Collet v. T. Eaton Company, Limited*, Manitoba (1935) 3 *Western Weekly Reports*, p. 43.

#### **Covenant in Restraint of Trade is Not Enforceable**

A drug company in Manitoba employed a manager at a monthly salary. After some months of employment the company required him to sign a bond, by which he undertook to refrain from engaging in a similar busi-

ness within 25 miles for a period of five years after his employment ceased. This condition was violated by the employee, who subsequently became the manager of a drug store next to the company's place of business. The company brought an action against the employee to enforce the conditions contained in the bond.

Mr. Justice Adamson dismissed the action with costs. (LABOUR GAZETTE, October, 1933, page 1056).

The Manitoba Court of Appeal, by a majority decision reversed the judgment of Mr. Justice Adamson (LABOUR GAZETTE, October, 1934, page 980).

An appeal by the employee was recently brought to the Supreme Court of Canada.

The Chief Justice, in giving his judgment stated:—"The bond goes beyond what is reasonably adequate in furnishing any protection to which the employer could conceivably be entitled. It forbids the covenantee, not only from violating proprietary rights, but from exercising his right to follow his trade or calling in any capacity, however humble or obscure, or however remote from the danger of infringing any proprietary right of the covenantee.

"For all these reasons, we think the bond is unreasonable, and is not enforceable. The appeal is allowed and the judgment of trial Judge is restored with costs throughout."

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment showed a considerable increase in Canada on October 1, according to statements received by the Dominion Bureau of Statistics from 9,414 employers, each with a minimum of fifteen employees, whose staffs aggregated 997,017 persons, as compared with 964,977 in the preceding month. Activity has shown a falling-off between September and October in six, and an advance in eight of the fourteen preceding years of the record, the change on the average being a fractional increase; the substantial improvement this year is therefore especially interesting. The index (based upon the average for the calendar year 1926 as 100) stood at 106.1 on October 1, 1935, compared with 102.7 on September 1, 1935, and 100.0 on October 1, 1934. On the same date in the thirteen preceding years, the index was as follows:—1933, 90.4; 1932, 86.7; 1931, 103.9; 1930, 116.2; 1929, 125.6; 1928, 118.8; 1927, 110.3; 1926, 106.5; 1925, 99.5; 1924, 95.0; 1923, 100.7; 1922, 95.8 and 1921, 91.3. These returns are representative of all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of October, 1935, reports were forwarded to the Department of Labour from 1,763 local unions with an aggregate of 166,764 members. Of these, 21,759 were unemployed, a percentage of 13.0 compared with 14.2 per cent at the beginning of September, 1935, and with 16.4 per cent at the beginning of October, 1934.

Reports received by the Department of Labour from the offices of the Employment Service of Canada for September, 1935, showed gains over August of the same year and, likewise, September, 1934, in the volume of business transacted, as indicated by the average daily placements effected, logging being largely responsible for the increase under the first comparison and farming, construction and maintenance and services under the latter. Vacancies in September, 1935, numbered 38,410, applications 60,496 and placements in regular and casual employment 35,775.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was \$16.42 at the beginning of October as compared with \$16.16 for September; \$15.96 for October, 1934; \$21.96 for October, 1929; \$21.14 for October, 1926; \$20.87 for October, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.48 for October, 1914. All of the three principal groups were higher, foods mainly because of the higher cost of potatoes, lard, eggs and butter, and fuel because of the higher cost of coal. In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was higher at 73.1 for October as compared with 72.3 for September. Comparative figures for previous dates are 71.4 for October, 1934; 96.8 for October, 1929; 98.1 for October, 1926; 99.6 for October, 1921; 164.3 for May, 1920 (the post war peak); and 66.8 for October, 1914.

The latest information available reflecting industrial conditions in Canada is given in the table on page 974. The index of the physical volume of business in September was down more than five per cent from the level of the preceding month but still five per cent above the level of September, 1934. In the former comparison all of the principal factors except trade employment were lower, the greatest declines occurring in mineral production, construction, electric power output and in manufacturing. Comparing September, 1935, with September, 1934, all the principal factors indicate advances, including in addition to those already mentioned car loadings, imports and exports. Information available for October shows gain in wholesale prices, employment, Canadian National earnings, the number of cars of revenue freight and in contracts awarded, both as compared with the preceding month and with October, 1934.

During October there were on record nineteen strikes and lockouts involving 3,566 workers and resulting in a time loss of 35,279 man working days as compared with eighteen disputes involving 5,691 workers and a time

(4) Figures for end of previous month.

(5) Figures for four weeks ending November 2, 1935 and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending October 5, September 7, and August 10, 1935; October 6, September 8, and August 11, 1934.

(7) MacLean's Building Review.

loss of 48,351 working days in September. Over one-half of the time loss during October was due to strikes of longshoremen and other water transport workers at Vancouver and other Pacific ports which began in June. None of the other disputes involved large numbers of workers for any considerable length of time. In October, 1934, there were nineteen disputes involving 5,993 workers and a time loss of 50,244 working days, most of the time loss being due to two strikes of loggers in northern Ontario and a strike of coal miners in Nova Scotia. Of the nineteen disputes in October, thirteen were recorded as terminated, five resulting in favour of the workers involved, four in favour of the employers concerned, compromise settlements being reached in three cases while the result of one is recorded as indefinite. The disputes un-terminated at the end of the month numbered six and involved approximately 1,500 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off or definitely declared terminated by the unions involved.

#### **Industrial Disputes Investigation Act**

During the past month the Department received the report of the Royal Commission concerning the industrial dispute involving the Shipping Federation of British Columbia and the longshoremen of the Vancouver Waterfront, and also the finding of a Board of Conciliation and Investigation established in connection with a dispute between various metal mining companies in the Bridge River district of British Columbia and their underground and surface workers.

On October 12, a Board was established to deal with a dispute between the Canadian Collieries (Dunsmuir) Limited and certain of its employees at Cumberland, B.C.

Applications for the establishment of Boards were received from certain employees of the Hamilton Street Railway and from certain employees of the Winnipeg Electric Company.

Recent proceedings under the Industrial Disputes Investigation Act are detailed in this issue in the section commencing at page 978.

#### **Hon. Norman McL. Rogers appointed Minister of Labour**

In connection with the change in the Dominion Government following the federal election of October 14, the Hon. Norman McLeod Rogers was appointed Minister of Labour, succeeding the Hon. W. A. Gordon.

Born in Amherst, Nova Scotia, Hon. Mr.

Rogers received his early education there, and then entered Acadia University in 1912. Following a period of overseas service in the Great War he completed his studies at Acadia University in 1919, graduating with the degree of B.A. At this time he was elected to a Rhodes scholarship at Oxford where he studied until 1922 receiving degrees in History, Political Science and Law. On his return to Canada he was appointed Professor of History at Acadia University and was later admitted to the Nova Scotia Bar. In 1927 he became Secretary to the Right Hon. W. L. Mackenzie King in his capacity as President of the Privy Council. Since 1929 he has been at Queen's University as Professor of Political Science. In 1934 he served as counsel for the Government of Nova Scotia before the Royal Commission of Economic Enquiry.

Hon. Mr. Rogers has written many articles for Canadian periodicals on economic and constitutional policies.

#### **Hours of Work and Weekly Rest Acts.**

With reference to The Weekly Rest in Industrial Undertakings Act and the Limitation of Hours of Work Act, enacted at the last session of Parliament to give effect in Canada to two Draft Conventions of the International Labour Conference, the Hon. Norman McL. Rogers, Minister of Labour, recently issued the following statement:—

"With regard to these statutes it was intimated on behalf of the late government, shortly prior to the general election, that until the regulations were drafted and finally approved no action should be taken in the nature of prosecutions or penalties. In the form in which both Acts passed Parliament no department of the government was designated to take charge of their administration. Notwithstanding this fact a large number of representations have been made to the Department of Labour by employers and workpeople in different parts of the country, which are now being closely examined. The Department of Labour has also before it the administrative measures which have been taken in other countries which have ratified the two draft conventions of the International Labour Conference on which these acts of the Canadian Parliament are respectively based. The preparation of the necessary regulations is thus proceeding in the light of the fullest information, in order that if and when the legislation is declared valid as a result of the reference which is being made by the Dominion Government to the Supreme Court of Canada as to the constitutionality of these enactments,

the regulations may be duly adopted and made public.

"In the meantime, it has not been thought that any exemptions from the provisions of the two Acts of Parliament in question can be granted to individual industries or classes of workers. The necessary arrangements in the Department of Justice for reference to the Supreme Court, in order to obtain a pronouncement by that body respecting the validity of these enactments, are being expedited to the utmost."

The Weekly Rest in Industrial Undertakings Act came into effect on July 4 and the Limitation of Hours of Work Act on October 5. Both enactments were reviewed in the LABOUR GAZETTE for July, 1935, at pages 621 and 623.

### **Social Legislation referred to Supreme Court of Canada**

Announcement has been made on behalf of the Government that reference will be made to the Supreme Court of Canada in order to secure at the earliest possible date a judicial determination as to whether the following Acts, which were adopted at the last session of Parliament, are *ultra vires* of the Dominion Parliament:—

The Employment and Social Insurance Act (LABOUR GAZETTE, July, page 617); The Minimum Wages Act (LABOUR GAZETTE, July, page 620); The Weekly Rest in Industrial Undertakings Act (LABOUR GAZETTE, July, page 623); The Limitation of Hours of Work Act (LABOUR GAZETTE, July, page 621); The Dominion Trade and Industry Commission Act (LABOUR GAZETTE, July, page 624); The Natural Products Marketing Act (LABOUR GAZETTE, April, 1934, page 304); and Section 498-A of the Criminal Code (relating to price discrimination) which was referred to at page 885 of the October issue of the LABOUR GAZETTE.

### **Change in administration of relief camps.**

In accordance with a recent announcement by the Prime Minister, Rt. Hon. W. L. Mackenzie King, arrangements are now being made for the transference of the administration of camps for single unemployed men from the Department of National Defence to the Department of Labour.

Approximately 16,000 men are being cared for in 114 active camps.

### **Inquiry into Alberta coal industry**

Notice of an inquiry into the coal industry of Alberta under the Public Inquiries Act is announced in the Alberta Gazette.

The Commission appointed on September 13 is empowered to conduct the inquiry into the industry "both in relation to the circumstances under which it is at present conducted and the possibilities of its future development." In particular, the inquiry is to proceed along the following lines:

1. (a) The cost of production, transportation, distribution and marketing of coal and its by-products and whether such costs or any of them are excessive, and if so, for what reason.

(b) The capitalization, financial organization and cost of management of any person or persons (including any corporation or corporations) operating mines producing coal and the excessiveness or otherwise thereof, and if so, as to the practicability of the revision or reduction of such capitalization, financial organization and cost of management in the best interests of the industry.

2. The wages and working conditions, living costs and conditions of housing and general welfare of mine workers in and about the mine.

3. The practicability of any scheme which will, in respect of coal, coke or by-products—

(a) Increase demand.

(b) Improve existing methods of marketing.

(c) Establish standards of coal, together with adoption of a name or description of such coal.

4. The practicability of any schemes for better regulation of the industry in the future, including—

(a) Proposals for extension of markets.

(b) Proposals for bringing production into relation to consumption.

(c) Proposals having for their object the promotion of rationalization, co-ordination or amalgamation in the industry or any portion of it.

Sir Montague Barlow, Bt., P.C., K.B.E., LL.D., of London, England, has been appointed the Commissioner to conduct the inquiry.

### **Canadian advisory officer honored at Geneva**

At the opening of the 73rd session of the Governing Body of the International Labour Office in Geneva, Switzerland, on October 24, Dr. W. A. Riddell, the

Canadian Government Representative on this Body, was honoured by being unanimously elected as Chairman.

Dr. Riddell, who is the Canadian Advisory Officer to the League of Nations in Geneva, has been a member of the Governing Body since his appointment to this position in 1924. His appointment as Chairman of the Governing Body has been received with expressions of marked general approval both in Canada and in Geneva.

The Governing Body of the International Labour Office, in addition to being in general control of the permanent staff, is charged with the responsibility of drawing up the agenda of the annual Conference. It comprises in all thirty-two members, of whom sixteen are Government representatives, eight employers' and eight workers' representatives drawn from the sixty-one countries which are members of the International Labour Organization.

#### **Restoration of Canadian seat on governing body of I.L.O.**

Reference was made in the March issue of the LABOUR GAZETTE (page 248), to the circumstances under which the Canadian Government ceased to hold one of the eight permanent seats on the Governing Body of the International Labour Office. Canada and Belgium at that time were replaced on the Governing Body by representatives of the United States of America and by Russia, respectively. Both Canada and Belgium, however, were given the privilege of being represented as Deputy members.

Through the resignation of Germany from the League of Nations and from the International Labour Organization becoming effective during the month of October past, the vacancy thus occurring in the Governing Body was filled at a meeting of that Body on October 24 through the designation of Canada to take the seat which had previously been held by Germany.

#### **Registrations of trade unions in Great Britain**

Statistical and other information pertaining to the registration of British trade unions under the Trade Union Acts is presented in the report for 1934 of the Chief Registrar of Friendly Societies (Part 4) recently received.

The report indicates that there were 458 unions of employees and 89 associations of employers on the register at the end of 1933; and that the membership of the unions of employees were reduced by 59,000 to 3,347,000. Female membership, in these unions, decreased to 322,000—a reduction of 7,000—owing to loss of members in the textile industry. Seven unions had more than 100,000 members at the end of the year.

Income from members showed a reduction of £148,000, and there was a drop of £1,338,000 in the income from the Ministry of Labour as a result of a decrease in the amount of State unemployment benefit disbursed by the unions. There was also a reduction of £615,000 in the amount of unemployment benefit paid out of the unions' own funds. Dispute, sick and accident and superannuation benefits showed small decreases, while the expenditure on funeral and other benefits and on political objects slightly increased.

The registration of trade unions in Great Britain was first permitted by the Trade Union Act of 1871, the principal Act which governs these bodies. The main purpose of the Act was to relieve trade unions and their members from some of the disabilities from which they suffered owing to their objects being in restraint of trade.

Associations, both of masters to regulate the relationship with their workpeople and of persons engaged in trade or business to impose restrictive conditions on such trade or business, are in law trade unions, and have the same privileges and are subject to the same conditions as trade unions of workpeople.

A number of unions, mostly small, are not registered, but the registered unions are believed to comprise about 80 per cent of the total membership of employees. In the case of trade unions of masters and traders only the small and less powerful are registered.

**National Youth Administration program in United States** The National Youth Administration (United States) on October 21 adopted a program designed to provide part-time jobs for 94,000 young men and women between the ages of 16 and 24. The Administration, which is a subdivision of the Works Progress Administration, announced that the work will be in the field of public service, and will not conflict with the labour market of established workers. The four projects planned by the NYA will begin around November 1 and are expected to continue until June 30, 1936. They will include community development and recreational leadership, rural youth development, assistance to regular governmental agencies in social activities and various types of research.

According to a recent announcement, at the next session of the Ontario Legislature, several amendments to the Provincial Apprenticeship Act will be introduced for the purpose of bringing this legislation more in line with present conditions in industry.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**T**WO applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under The Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

(1) From certain employees of the Hamilton Street Railway Company being members of Division No. 107, Amalgamated Association of Street and Electric Railway Employees of America. The matters involved in the dispute are wages and hours of labour, 303 employees being directly affected. An officer of the Department of Labour has been instructed to visit Hamilton and confer with the interested parties.

(2) From certain employees of the Winnipeg Electric Company being members of Locals 1037 and 435, International Brotherhood of Electrical Workers. Fifty employees are stated to be directly affected by the dispute, which relates to their request for restoration of at least one-half of the 15 per cent deduction in wages provided in the agreement with the company dated March 31, 1933.

A Board of Conciliation and Investigation was established by the Minister of Labour on October 12 to deal with a dispute between the Canadian Collieries (Dunsmuir) Limited and certain of its employees at Cumberland, B.C. The members of the Board are as follows: Mr. J. A. Russell, K.C., of Vancouver, Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. George Kidd and Charles McGregor Stewart, both of Vancouver, nominated by the company and employees respectively. The application in this matter was received from the employees on September 16 (LABOUR GAZETTE, October, page 888).

It was reported in the May issue of the LABOUR GAZETTE, page 397, that an application for a Board of Conciliation and Investigation had been received from employees of 12 coal mining companies operating in the Edmonton district in Alberta. The dispute related to the

employees' request for wage increases and the adjustment of certain inequalities, approximately 700 men, members of District 18, United Mine Workers of America, being directly affected. It was intimated by representatives of the mine operators and officials of the union that the services of the Western Representative of the Department of Labour might be helpful in finding a solution of the differences, and this officer accordingly conferred with the interested parties in Calgary. It was subsequently agreed that the matter of the application would be allowed to remain in abeyance pending receipt of the report of the Board of Conciliation and Investigation which was inquiring into a similar dispute in the Drumheller coal field. The report of this latter Board was made public early in August. Later in the month the representatives of the Edmonton coal operators and the union officers resumed negotiations. They failed, however, to reach an agreement and jointly requested the presence of the Western Representative of the Department. Mr. Harrison arrived in Edmonton on September 10, and during the conferences which ensued a tentative agreement was reached with reference to the matter of inequalities. Owing to other urgent departmental business, Mr. Harrison was unable to remain in Edmonton throughout the negotiations on the matter of wage rates. Through telegraphic correspondence, however, he suggested a basis for further negotiations, which resulted in a settlement being reached providing for a wage increase of 5 per cent, with other minor adjustments, this increase being the same as that recommended by the Conciliation Board which dealt with the dispute in the Drumheller coal field, and which had been already accepted by the coal operators and the miners in the Drumheller area. A communication was received in the Department of Labour on October 26 from the union officials advising that the agreement had been ratified by the membership of the union and that they desired to withdraw their application for a Board of Conciliation and Investigation.

### Report of Board in Dispute between Various Metal Mining Companies in the Bridge River District in British Columbia and their Underground and Surface Workers

The Board of Conciliation and Investigation which was established in July to deal with a dispute between various metal mining companies in the Bridge River district in British Columbia and their underground and

surface workers reported to the Minister of Labour at the close of October. The dispute related to the employees' request for increased wages and a general improvement in working living conditions, approximately 600 men being

directly affected. The mines involved were the Pioneer Gold Mines of British Columbia, Limited, the Bralorne Mines, Limited, the Bradian Mines, Limited, the Wayside Consolidated Gold Mines, Limited, and the Congress Gold Mines, Limited. The Board's report is signed by the chairman, His Honour Judge J. C. McIntosh, and the member nominated by the employees, Mr. W. A. Pritchard. The companies' nominee on the Board, Mr. T. W. Bingay, submitted a minority report. The text of these reports is given below.

Upon receipt of the Board's findings certified copies were mailed by the Department of Labour to the employers and employees concerned. Inasmuch as certain of the Board's recommendations related to matters falling within provincial jurisdiction, a certified copy was forwarded also to the provincial authorities.

### Report of Board

*In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between The Pioneer Gold Mines of B.C. Limited; Bradian Mines Limited; Bralorne Mines Limited; Wayside Consolidated Gold Mines Limited and Congress Gold Mines Limited (Employers), and certain of their employees, being underground and surface labour (Employees).*

Report of William Arthur Pritchard and John Charles McIntosh (Chairman), being majority members of a Board of Conciliation and Investigation to which Board the above dispute has been referred under the provisions of the above Act.

By virtue of the authority vested in the Board by the Honourable W. A. Gordon, Minister of Labour, the 25th day of July, 1935, public hearings for the taking of evidence regarding the dispute were held at Goldbridge and Vancouver, and the Board personally investigated existing conditions, both surface and underground.

The mining field known as the Bridge River, in which the properties of the employers are situate, is a gold field comparatively small in area and is reasonably accessible. The properties in active production are the Pioneer, Bralorne and Bradian, while the Wayside and Congress are in process of development. Approximately 80 per cent of the 760 men working in this area are employed by the Pioneer and Bralorne, the Bradian being now operated by the Bralorne.

The matters dealt with by the Board are:

- (1) General complaints.
- (2) Living conditions.
- (3) Working conditions.
- (4) Wage scale.

### General Complaints

#### (a) Hospitalization:

The procedure to be followed is provided by the Masters & Servants Act, R.S.B.C. Cap. 154, which gives the employees voice in such matters. There are two hospitals, each operated by the Pioneer and Bralorne, and the accommodation, considering location, is reasonably sufficient and are efficiently staffed.

It is suggested that the possibility of merging and centralizing these hospitals might be explored, in the best interests of all concerned.

#### (b) Schools:

As the living condition of the employees progresses this becomes a matter of major importance. There are two schools contiguous to the homes of the employees of the Pioneer and Bralorne. These schools were built by these employers who receive respectively \$1,250 and \$1,200 by way of Provincial government grant, and in the case of Bralorne the balance of the two teachers' salaries, and the cost of operation is borne by the employer. In the case of the Pioneer school each employee contributes 50 cents per month towards salaries and costs of operation. This is not provided for by the School Act, but is presumably a term of employment and is neither levied nor collected by the School Board in the person of the official trustee, in the selection of whom the employees have had no voice.

It is recommended that a survey be had by the Department of Education and that the situation be clarified by the establishment of a more comprehensive school district in conformity with the provisions of the School Act.

#### (c) Community Halls:

The Bralorne has provided its employees with this very necessary convenience, partially supported by dues paid by employees: while Pioneer dues are the same, the contributions by this employer and rentals obtained, are used to liquidate the capital cost, this hall being more of a commercial undertaking. Both these employers have done much to facilitate the physical and mental recreation of their employees and it is hoped that this good work will be encouraged and amplified.

*(d) Registration Bureau:*

It is suggested that the possibility of locating the employment office now at Shalalth, at a point which might be more convenient to prospective employees, be considered.

*(e) Group Insurance:*

This is seemingly in the best interests of the employees and it is our understanding that the employers will give the employees in the near future an opportunity to pass on the advisability of continuing these protective measures.

*(f) Silicosis:*

An investigation is now under way by authority of the Provincial Government.

*(g) Method of Payment of Wages:*

Arrangements generally satisfactory. In an isolated instance cheques were issued by an employer on an outside bank, subject to discount.

*Living Conditions**(a) Housing of Unmarried Men:*

Improvements are being made in the condition of the bunkhouses, all of which is subject to the provisions of the Mines Regulations Act.

*(b) Housing of Married Men:*

The shortage of houses is rapidly being mitigated by the erection of suitable houses, let at a fair rental.

*(c) Living Costs—Unmarried Men:*

These generally compare favourably with the costs of other camps.

*(d) Living Costs—Unmarried Men:*

The charges are practically the same as in other mining camps. The food is abundant and of excellent quality.

*Working Conditions**(a) Hazards:*

Conditions in this regard are generally good and the provisions of the Mines Act looking towards the minimizing of the working hazards are being enforced by efficient officials of the Provincial Government. It is recommended, however, that there be a representative safety committee provided for in each mine to make the working of this Act still more effective.

*(b) Hours of Labour:*

The Dominion Act now covers all industries, providing an eight hour day and a forty-eight hour week, allowing for a rest day.

*Wage Scale*

It is recommended that the following wage scale now being paid by the employers be continued:

Underground	
Miners .....	\$ 5.40
Timbermen .....	5.40
No. 1 Hoistmen .....	5.40
No. 2 Hoistmen (small) .....	4.90
Trackmen .....	5.40
Pipemen .....	5.40
Trackmen's Helpers .....	4.50
Machine Doctors .....	5.40
Chute Punchers .....	5.40
Power House Operators .....	5.40
Electricians .....	5.40
Electricians' Helpers .....	4.40
Mechanics .....	5.40
Mechanics' Helpers .....	4.40
Welders .....	5.40
Motormen (Main Haulage) .....	5.15
Motormen .....	4.90
Brakemen .....	4.50
Skiptenders .....	4.90

Surface	
Muckers .....	\$ 4.50
Nippers .....	4.50
Timberhelpers .....	4.50
Crushermen .....	5.00
Aerial Tramway .....	4.50
Mill Operators .....	4.90
Concentrators and Mill Helpers .....	4.40
Steel sharpeners .....	5.40
Steel sharpeners' Helpers .....	4.75
Carpenters .....	5.40
Mucking Machine .....	4.75
Truck Driver .....	4.90
Compressors .....	4.90
Teamsters .....	4.90
Heating Plant .....	4.25
Watchmen .....	4.40
Labourers .....	4.00
Ore Sorting Plant .....	4.00
Bullocks .....	4.00
Flunkies .....	4.00

This scale was adopted by the parties hereto on the recommendation of the Honourable George S. Pearson, Minister of Mines and of Labour for British Columbia, pending the holding of this enquiry. It is a fair and reasonable scale of wages for men employed in this area, having regard to the simplified character of mining operations and the highly advantageous position in which these mine employers find themselves. That this is recognized by the employers, the following excerpt from the letter of Dr. H. P. James, then General Superintendent of the Pioneer Gold Mines of British Columbia and now General Manager, to the Registrar, Boards of Conciliation and Investigation, Ottawa, on accepting the institution of the Board, dated July 4, 1935, is indicative of his satisfaction with the scale, as he says at page 7:

"The Central Committee apparently regard this settlement as a temporary measure pending investigation by the Board of Conciliation. Although this decidedly was not the understanding of operators at the time of accepting Mr. Pearson's suggestions, this company is anxious to reach a final settlement of the dispute, if such there still is, and is willing

to have a Board of Conciliation and Investigation appointed to enquire into this matter.<sup>37</sup>

And the letter of R. Bosustow, General Manager, Bralorne Mines Limited, also to the Registrar and dated July 3, 1935, at page 2:

"At a meeting of the officials of the various operating companies involved in the strike it was agreed by the Bralorne Mines to accept the new proposal as offered through the Honourable Mr. Pearson.

"At a general meeting held at Pioneer Community Hall the afternoon of May 21st, the above wage scale was accepted by the employees. The Central Strike Committee, however, regarded the settlement as a temporary measure pending further investigation by a Board of Conciliation."

It is clear that both Dr. James and Mr. Bosustow regarded this wage scale as a continuing one and one which should have been acceptable to the employees. Much data was introduced by the employers to show that this scale is higher than that paid in other parts of Canada in mines of a similar character, but at least one gold mine—the Premier—pays a higher wage scale than the one recommended.

It was agreed by the parties during the hearing that one wage scale only should be adopted and not a lesser one for the non-dividend paying concerns in process of development.

(Signed) W. A. Pritchard,  
J. C. McIntosh,  
Chairman.

Dated at Vancouver, B.C., this 23rd day of October, 1935.

### Minority Report

*In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between The Pioneer Gold Mines of B.C. Limited; Bradian Mines Limited; Bralorne Mines Limited; Wayside Consolidated Gold Mines Limited and Congress Gold Mines Limited (Employers), and certain of their employees, being underground and surface labour (Employees).*

Report of Thomas Wentworth Bingay, being minority member of a Board of Conciliation and Investigation to which Board the above named dispute has been referred under the provisions of the above Act.

I concur in the accompanying report except as to wage scale. I disagree with my colleagues in this connection, for the following reasons:

I will quote from pages 48 and 49 of the transcript:

"The CHAIRMAN: It is the duty of the Board undoubtedly to take evidence and go into the matter and investigate it thoroughly and come to a conclusion on a wage scale, not necessarily the temporary one, not necessarily the one suggested by yourselves, not necessarily the one suggested by the operators.

"Mr. McIVOR: Is it not understood it is only a question of the difference between the original offer and the temporary wage scale we are now working under?

"Mr. FARRIS: Oh, no, because we are saying we were forced into the position of having to put up with a much higher wage scale than conditions warrant, and we are going to ask now that the matter has been opened up, for a proper wage scale. The men say, we were asked to come back to work to get this settled, and we say we offered that only as a temporary method of carrying on the work, and now we say the Board is formed, the men have asked for it, and they have to go into the conditions and set a proper wage scale for the district, in accordance with the conditions.

"The CHAIRMAN: I have already dealt with the matter in my statement, and all members of the Board have expressed an opinion on that. It is suggested we deal with this matter and take such evidence as affects the wages irrespective of any wage scale now existing.

"Mr. PRITCHARD: I agree that the present wage scale is a temporary one."

It is to be noted from the above quotation that the scale being then worked under was considered as temporary by all parties and was so ruled by the Board, and therefore subject to revision either up or down.

The counsel for the employers then withdrew the claim for a lower wage scale for non-dividend paying properties, and the enquiry proceeded on the assumption that a scale would be set, regardless of the temporary scale. No evidence was taken as to how the temporary scale was arrived at, as it seemed to be immaterial to the issue.

I disagree with the inference drawn from statements of the operating officials of Bralorne and Pioneer, that they had expressed satisfaction with the temporary scale suggested by the Minister of Labour.

This scale can hardly be cited as one of their free choice, as the statements quoted show that it was adopted only as a result of protracted negotiations between the parties and after considerable governmental intervention.

It appears then, that the Board should have based its findings upon the evidence as to wage scales elsewhere. Furthermore, whatever might be inferred from statements of Bralorne and Pioneer officials, they can

hardly be construed as binding the Wayside and Congress. Apparently this fact has not been given its proper consideration in the majority report.

The data submitted by the employers, evidently prepared so as to be representative, was compiled from the wage scales of the Canadian operations most similar to the Bralorne and Pioneer mines. In my opinion they exhibited a fair average of these scales. The cost of living is admitted, after full consideration of data submitted, to show that in this respect the Bridge River district compares favourably with that at the other mining operations brought into comparison.

The supplement to "The Labour Gazette" of January, 1935, "Wages and Hours of Labour in Canada," which was filed as an exhibit, confirms the correctness of said data.

Comparison is made in the majority report with the Premier wage scale; that is with the exceptional case of an exceptional mine.

Also this comparison is made without evidence as to living costs, which might modify the wage comparison considerably. The Premier produces silver practically equal in value to its gold production. The fairer comparison, undoubtedly, is with the considerable number of Canadian gold producers, as filed by the employers.

The data presented to the Board by the employers, not only indicates that the scale recommended by the majority is higher than those of the generality of Canadian gold mines, but also that the scales in Bridge River prevailing before the strike, in general compared favourably with them. There therefore seems to be no justification for a general increase over the May 1st scale, and no evidence was produced by the employees to justify such an increase.

Dated at Vancouver, B.C., this 23rd day of October, 1935.

(Sgd.) T. W. Bingay.

### **Report of Royal Commission Concerning Industrial Dispute on Vancouver Waterfront**

ON September 10, 1935, the Honourable Mr. Justice H. H. Davis, of the Supreme Court of Canada was, in accordance with Section 65 of the Industrial Disputes Investigation Act, appointed a commissioner under the provisions of Part I of the Inquiries Act to inquire into an industrial dispute which had been in existence for several months on the Vancouver waterfront, involving the Shipping Federation of British Columbia, Limited, and the longshoremen at that port (LABOUR GAZETTE, September, 1935, page 803). Hon. Justice Davis proceeded immediately to the City of Vancouver and there held a public hearing, on notice to all parties concerned, from September 16 to October 9, 1935, inclusive. On October 9, 10 and 11, he conferred with three representatives of each party to the dispute. His report and findings were received in the Department of Labour on October 22, and certified copies were mailed immediately to the Shipping Federation of British Columbia, Limited, and the Vancouver and District Waterfront Workers' Association. The text of the Commissioner's report is given below.

#### **Report of Commissioner**

On October 10, 1934, the Vancouver and District Waterfront Workers Association, an organized union of longshoremen engaged in work on the Vancouver waterfront, said union having been in existence since 1924, entered into a three-year agreement (Exhibit 3) with the Shipping Federation of

British Columbia Limited, an association of shipping, stevedoring, cargo-handling and other seagoing and port interests. The said agreement fixed the rate of wages and set out in detail the working conditions agreed upon. This agreement took the place of an agreement between the same parties that had expired on the 31st day of October, 1933. During the intervening period of nearly a year the parties had been continuously negotiating the terms of the new agreement; there had been created under the provisions of the Industrial Disputes Investigation Act, chap. 112 of the Revised Statutes of Canada, 1927, a Board of Conciliation which, after sitting several weeks under the Chairmanship of The Honourable Mr. Justice Robertson of The Supreme Court of British Columbia, had issued its report dated June 30, 1934; and there had come into existence on April 1, 1934, a larger organization, known as The Longshoremen and Water-Transport Workers of Canada, of an advisory nature, to which the Vancouver and District Waterfront Workers Association immediately became a member as Local No. 1, and to which in due course the New Westminster and District Waterfront Workers Association, the Victoria Riggers and Transport Workers Association, the Vancouver Export Log Workers Association, the Coastwise Longshoremen and Freight Handlers, the Seafarers Industrial Union and other organizations became affiliated members.

The constitution of this new organization states that its function was "to promote the well-being of the workers engaged in this

industry in order that through their organized effort they may secure an adequate wage, reasonable working hours and decent working conditions."

If there was an advantage to the Vancouver and District Longshoremen's Union in the advice and guidance of this new and larger organization formed in April, 1934, the local union had such advantage before it entered into the said agreement on October 10, 1934. With so much time spent in negotiating the terms of the agreement, so much investigation had into the alleged grievances and so much advice available from the larger organization formed, one would have expected that the new three-year agreement would be reasonably satisfactory to the parties. There was a veiled suggestion before me that the men had been intimidated into signing the agreement, but the farthest that any reliable evidence went in the tenseness of feeling at the Enquiry was that the men had "reluctantly" accepted the agreement.

A week after the agreement was made, the employers, the Shipping Federation, voluntarily granted an increase in the base wage fixed by the terms of the agreement by five cents an hour, the minimum working pay then being for ship men 85 cents an hour straight time and \$1.28 an hour overtime, and for dock men, 81 cents an hour straight time and \$1.22 an hour overtime. In the light of the 1934 payroll of the Shipping Federation amounting to \$1,104,328.15, its voluntary increase of over 6 per cent in wages represented a very substantial amount of money.

Greer, one of the two business agents of the Vancouver and District Waterfront Workers Association, testifying on behalf of the Union, frankly stated to me in his evidence that the agreement of October 10, 1934, was "a better agreement than had been on the waterfront the last ten years." Melnikow, of San Francisco, an American expert on longshore labour problems, was called as a witness by the Union. He described himself as a consulting economist and Director of the Pacific Coast Labour Bureau. He said he had made a special study of longshoremen's agreements and stated in evidence in reply to a question put by me that "on the whole the October agreement was a very fine agreement," though he pointed out certain respects in which it could be improved from the men's point of view. Crombie, the labour manager of the Shipping Federation, who impressed me as an eminently fair representative of the employers and as a man of large practical

experience on the Vancouver waterfront over the past twelve years, testified that there never had been a better agreement on the Vancouver waterfront.

With this agreement finally entered into by the Union on October 10, 1934, and to remain in effect by its express terms until September 30, 1937, and to continue thereafter until either party gave notice to the other sixty days prior to the thirtieth of September in any year, one would have expected a certain amount of industrial peace on the Vancouver waterfront for at least two or three years. But immediately after the agreement was signed all sorts of objections, complaints, grievances and demands, written and verbal, were made continually by the Union against the Shipping Federation and these culminated as early as June 5, 1935, in a complete breakdown.

This may be a convenient place, before proceeding with the narrative of the events that ended in the complete breakdown that occurred on June 5, 1935, to define what is meant by the term "extra" or "basement" men and by the term "despatcher," because these terms will occur frequently in my review of the evidence. It is to be borne in mind that longshore labour is of a peculiar nature in that it is of necessity intermittent employment and subject at all times to fluctuating and uncontrollable periods of slackness and of peak loads and that consequently the best interests of the individual longshoreman depends upon a careful regulation from time to time of the total number of men to be employed at more or less permanent labour at the particular port. If the total number of men is too large for the normal needs of the port at a particular time, then the amount of work available for each man becomes insufficient for a reasonable living if any approach is made to an equitable distribution of the available work among the men. If, on the other hand, there is too small a number of permanent men available for the needs of the port, it creates a condition when too much overtime and rush work is required from the men to be conducive to the good health and welfare of the individual labourer. There has grown up consequently the system of the employers and the employees settling from time to time, as the normal needs of the given port require, a registration list of those who will be entitled to more or less permanent work. The registration is said to be "frozen" at the point of the total number of men fixed by this list. The men so registered are regarded, subject

to individual efficiency for the various classes of work, as the men among whom the longshore work at the port will be distributed with as much equality as the qualifications of the individual man and the nature of the labour required will permit. These men are known as the permanent or regular longshoremen at the port. But in the very nature of any large shipping port there occur days or seasons of peak loads when an unusual number of ships happen to be in port loading or unloading cargo at the same time, or unusually large quantities of a particular kind of cargo requiring a particular type of longshoreman are being loaded or unloaded. Such conditions may exhaust at the time the total number of registered longshoremen available for the particular work, and "casual" labourers must be called upon at such times to assist in the handling of the peak loads. These "casual" labourers who pick up work intermittently are known as "extra" men, and at the port of Vancouver became known as "basement" men because they gathered awaiting work in the basement of the despatching hall of the Shipping Federation instead of on the main floor of the building which was used by the permanent or registered men. All the men on the registration list were permitted to form a union for their own benefit, and through their joint action were enabled to collectively bargain for their wages and working conditions. In October, 1934, when the agreement in question was made at Vancouver, the registration list was settled at 940 men. There were roughly seventy-five or one hundred men who were known to be available from time to time for surplus work at times of peak loads. Some of these men were experienced longshoremen of six or seven years' standing, some of them were "ex-employees" or "ex-card" men, which means that they were at one time or another regular employees at some port and held a card from the union at that port. Due to illness or change of residence or some other cause they had withdrawn from the registration list at some port but were willing to pick up whatever work they could until such time as an increase in the number of the registration list would enable them to be added to that list. These men were not members, for the time being, of the Union because the Union was limited to the registered men. The limited registration of men based upon an average of the daily requirements for normal conditions is the basis of the decasualization theory generally applied in the United States and Canada. As I understand it, in England they

go on a different theory, that is to have enough men to meet the peak loads or abnormal conditions and by unemployment insurance attempt to cover the men who from time to time are not required. In the absence of unemployment insurance in the United States and Canada the system of having the registration list limited to the needs of normal conditions and taking on "extra" men in time of need has grown up.

Now all these men, whether registered Union men or extra men, had to be despatched for work by some person and the person who despatched them became known as the "despatcher." The registration men were despatched at Vancouver mainly, and from about the first of February exclusively, by the chief despatcher, whose office was on the main floor of the despatching building owned and operated by the Shipping Federation. Another despatcher in the basement, working in conjunction and taking his instructions from the despatcher upstairs, despatched the extra men from the basement as and when required. He soon got to know the casual labourers who were available from time to time and had his own list of them. In the very nature of the peculiar requirements of longshore labour, the selection of men for work from time to time among the registration or Union members themselves, on the one hand, and the selection of men from time to time as between the registration or Union members and the extra men, was bound to lead to constant individual grievances. Good, strong and experienced men from the registered or Union membership would often be employed when others on the same registration and belonging to the same Union would think that they were just as capable and worthy of the work. Again, when extra men were despatched from the basement, members on the registration and belonging to the Union would think that they were just as good men and better entitled to preferment. Much therefore turned on the fairness of the particular individual who was acting as "the despatcher." The men thought there was too much favouritism and discrimination on the part of an employer despatcher; the employers on the other hand thought that it was necessary to the efficiency of the work that they should appoint the despatcher and control the distribution of the work. The latter system left much to the employers in ordering out their own preferred men, preferred on the ground of individual efficiency; the former system led to a more equal distribution of work by rotation among the men looking to an equalization of earnings.

The agreement of October 10, 1934, continued the practice of employment of "extra" men. The agreement expressly provided:

11. It is herewith recognized and agreed to by both parties to this Agreement that the employment of Members of the Association by Members of the Shipping Federation, and the work which will be allotted to Members of the Association, is dependent in the first place upon members of the Association being and continuing to be in the opinion of the employers, efficient and capable of performing a fair day's work, and of satisfactorily handling the particular commodities to be loaded and/or discharged at the time when men are required.

12. While the Federation cannot guarantee 100 per cent of the work, the Federation will continue to allot work and employ only Association men when available, as the Federation is doing at present, that is to say; with the exception of jitney driving and/or the working of other mechanized dock devices, and the work performed by dock maintenance men, the Federation will allot work to the efficient members of the Association registered with the Federation, or who may hereafter become so registered in accordance with the terms of this Agreement and according to the amount of daily work available.

The said agreement further expressly provided for the despatcher being appointed by the employers. Where the labour Union appoints the despatcher from among its own members, the system is called "Union despatching." That the practice at Vancouver of employer-despatching was definitely continued by the agreement is plain from clause 4 of the agreement which reads as follows:—

4. That the employment and regulation of all Waterfront labour including the despatching and distribution of work and earnings shall be controlled by the Shipping Federation and supervised through its Labour Manager in accordance with the Regulations attached hereto and marked Schedule "B."

To safeguard the interests and welfare of its members, the Association may appoint an accredited representative to co-operate with and assist the Labour Manager in carrying out the supervision and administration of Schedule "B."

The last paragraph of clause 4 was a new provision intended to afford the Union greater facility in checking up on the despatcher and keeping in touch with exactly what was going on in the despatching room and was accepted by the men as an improvement over the old system. Reference should here be made to section 32 of schedule B to the agreement which reads as follows:

32. The Business Agent or Agents or any accredited member of the Association appointed to act as a special representative, shall have all reasonable access to the Shipping Federation Despatch Office, for the purpose of acquiring and distributing first-hand information in regard to and in connection

with orders for work, allotment of work, and the despatching of men to work during despatching office hours, so long as such representatives continue to co-operate with the Despatching Staff and continue to maintain harmonious conditions between the Despatching Staff and the members of the Association registered for employment.

The whole of Schedule B to the agreement is an elaborate and detailed definition of despatching regulations. It was drafted by Major Crombie, the Labour Manager of the Shipping Federation, and during the long period of negotiation for the new agreement was finally settled in its present form jointly by the employers and the employees and is admittedly an improvement for the employees over the former agreements.

Reverting now to the agreement that was signed on October 10, 1934, on that very day the Secretary of the Union wrote the Shipping Federation requesting an increase of five cents per hour in the base wage and while that letter was under consideration by the Federation, the Union sent a second letter dated October 17 repudiating the authority of the previous letter and requesting an increase in the base wage by fifteen cents an hour (Exhibit 64). On November 23 (Exhibit 73) the Union wrote the Federation asking consideration of employing the members of the Freight Handlers Association (a group affiliated with the larger organization) when extra men were required. On December 5th (Exhibit 32) the Union wrote complaining that stevedores were obtaining men from New Westminster rather than local men "in taking care of the present peak load."

The evidence before me disclosed that the bringing of extra men when necessary from New Westminster involved considerable additional expense in transportation to the employers and was only resorted to when experienced men for particular work were not available from the Union. There was nothing substantial in the complaint. On December 20 (Exhibit 21) the Union wrote the Federation, setting up its interpretation of clause 13 of the agreement in connection with the employment of extra men, outside the Union, when peak loads made it necessary to engage men over and beyond the members of the Union. The letter put a construction upon the agreement that was not only not in accordance with long established practice under the prior agreements but not sustainable upon the language of the existing agreement or upon the construction put upon the language by the Union itself up to the date of the letter. This involves a consideration of the

contention of the Union with respect to extra men for surplus work at time of peak loads, and, being one of three major questions, I shall refer to it again. The setting up of this contention as early as December 20 taken in the light of the other demands of the Union made prior and subsequent thereto, bears its own significance in the narrative. On December 28 (Exhibit 85) the Shipping Federation engaged one, Hall, an outsider having considerable familiarity with the shipping industry by virtue of his having been a member of two Boards of Conciliation between the Union and the Federation, one in 1930 and the other in 1934, to undertake during the six months then ensuing a special investigation "with the object of the Federation getting into closer touch with the men themselves." On January 5 (Exhibit 76) the Federation by letter notified the Union of this appointment and expressed the hope that Hall "may be assured of hearty co-operation and assistance" from the Union. Replying on January 31 (Exhibit 77) the Union stated that "the Executive Committee of the Association and their officials welcome the movement and they will be willing and ready to co-operate with Mr. Hall," but, very properly, saying that they "do not understand and will not recognize that Mr. Hall will be taking the place of or acting in lieu of the Advisory and Negotiations Committee" set up by the agreement. Sinister motives on the part of the Federation in the appointment of Mr. Hall were subsequently attributed by the Union at the Enquiry.

As early as January 3 (Exhibit 19) the Union wrote to the Federation seeking the consent of the Federation to an increase in the number of men in the Union and further asking that several dock gang men be created into a new ship gang. The number of men to be in the Union had been fixed by the October agreement and any increase in numbers was specifically provided for by joint action (clause 13). By the recitals in the agreement the parties had acknowledged that the well-being of longshore labour "depends upon a careful regulating of the total number of men registered for employment." This letter of the 3rd was fully answered with facts and figures by the Federation in two separate letters on January 21 (Exhibit 89 and 90). On January 19 (Exhibit 7) the Union by letter complained of the despatching of members for surplus work from the basement of the Despatching Hall where non-members gathered to pick up surplus work when at peak load conditions there was a

need for extra men. The letter stated that the Executive Committee of the Union "feel that an arrangement whereby all members, whether receiving work under their own category or surplus work on ship or dock, be despatched from the upstairs wicket would be a great improvement." The Federation acceded to this request (Exhibit 8), and wheat-trimmers and surplus ship work men who were members of the Union, were transferred within a few days from the boards in the basement to new boards provided for them on the main floor. This having been accomplished, only non-members were accorded access thereafter to the basement. The Union then complained of the closing of the basement to their representatives, and, while it may have been a tactless step on the part of the Federation that aroused suspicion, the Federation was clearly entitled to take that course. The compliance of the Federation with the request of the Union to move these men upstairs had given rise to a new ground of complaint.

On January 28 the Union wrote again (Exhibit 34) to the Federation re-asserting their interpretation of clause 13 of the agreement as applicable to the employment of extra men.

On February 4 (Exhibit 74) the Union wrote again to the Federation that "the membership of the Association has gone on record as demanding that the preference for surplus work be given to the Coastwise Longshoremen and Freight Handlers Association" (an affiliated union) when no Union men are available and after certain other men mutually agreed upon have been despatched. The letter set out a resolution passed on November 19 at a general meeting of the Union that "if no satisfactory action can be obtained by request, the Association take steps to bring about the arrangement themselves," and a further resolution passed at the same meeting "that the Executive Committee be empowered to instruct the Business agents to refuse to allow no-card men to work if and when they see the necessity or advisability for so doing, and that Association members refuse to work with no-card men unless they have a permit from the Business agents." It is perfectly plain under the agreement, as well as upon the established practice, that the Union had no such right to dictate in respect of extra men for surplus work at peak load conditions. A mass meeting of the Union was held on Sunday, February 10, and by letter of February 11 (Exhibit 35) the Fed-

eration was advised of several resolutions passed at that mass meeting. One resolution read:

"That this meeting declare that all surplus work shall be given to ex-employees with special consideration given to others considered by the Association membership as entitled to the work and when this list is exhausted, the work be given to the affiliated locals."

And another resolution read as follows:

"That on and after 7 a.m. on Tuesday, February 12, 1935, members of the Association shall refuse to work with any non-member whose despatch slip has not been stamped by an accredited representative of the Association."

The Federation had by its letters of February 8 (Exhibit 75) clearly defined its rights and position in respect of casual labour, and the resolutions above mentioned of the mass meeting of the Union were plainly in defiance of those rights. The Federation by letter of February 12 (Exhibit 91) stated that, should any action be taken by the Union or its members along the line suggested in the resolutions, "such action will be considered by the Federation as a direct violation of the Agreement." Then on March 12 the Union notified the Federation (Exhibit 70) that it had accepted thirteen new men as members of the Union; this without going through the procedure provided by clause 13 of the agreement respecting new members.

On April 5 a new course of conduct on the part of the members of the Union occurred. The Union refused to load logs on the North Vancouver shore that had been cut by members of one of their affiliated locals, the Vancouver Export Log Workers Association, because the latter union had a dispute with their employers. The Vancouver Union, "in consideration of close relationship of this Association and the Export Log Workers," resolved "that this Association also declare the logs unfair and if the Export Log Workers' strike is still on, on the morning of April 5, we refuse to load logs" (Exhibit 36). This was a sympathetic strike of the Vancouver Union with one of the other locals affiliated with the Longshoremen and Water-Transport Workers of Canada. This stoppage of work continued from April 5 till April 24, notwithstanding that clause 16 of the agreement of October 10 had specifically provided against stoppage of work for any reason "except the one of safety." No question of safety was involved. On April 11 (Exhibit 62) the Secretary of the Longshoremen and Water-Transport Workers of Can-

ada wrote the Secretary of the log workers' employers that "the present controversy stands fair to lead the whole marine transportation industry into a serious tie-up."

On April 17 (Exhibit 33) the Union submitted to the Federation changes it desired in the working conditions set up by the October agreement. On April 26 (Exhibit 27) the Union notified the Federation that a mass meeting of the members "declared a rest period between the hours of 3 p.m. and 4 p.m. on Monday, April 29, 1935, and no work will be performed between these hours." The evidence disclosed that the rest period was to enable the men to participate in the Relief Camp Strikers' parade in Vancouver. The same letter notified the Federation "that the same mass meeting declared May 1, 1935, a holiday so that the members could attend the May Day celebrations." The Federation replied (Exhibit 92) "that the contemplated action on the part of your members would constitute a breach of the agreement which prevails between the Federation and the Association." The Federation on May 2 (Exhibit 93) notified the Union that a complete cessation of work on April 29 between 3 and 4 p.m., and gangs ordered to work at 8 a.m. on May 1 not reporting to work till 5 p.m., constituted breaches of the agreement.

On April 30 at a meeting with representatives of the Union the Federation clearly outlined its position with reference to matters above referred to, and delivered a letter (Exhibit 37) covering the same to the Secretary of the Union and sent a copy to each of the 927 members of the Union, obviously being of the opinion that the officials did not represent the will of the general membership or instructed them to act contrary to the terms of the agreement. The sending to every member of a copy of the letter may have been a tactless thing to do, but it fully and plainly disclosed to each member the position taken by the Federation.

The Union replied by letter dated May 3 (Exhibit 24) insisting upon what they termed their right to stop work on unfair cargo. "We state once more that under no consideration will we surrender our freedom in exercising the principles of a labour union." The letter proceeded to state that "other instances of stoppage of work and the many minor grievances existing will be found on investigation, to arise from one fundamental source, namely, the control of despatching and distribution of work and earnings by the Shipping Federation." The Union repeated its position that the closing of the basement of the despatch-

ing hall to officials and members of the Union was a breach of the agreement. The letter proceeded, "Will it ever be possible for us to convince the Federation that the members long ago completely lost faith in the fairness and impartiality of the employer-controlled despatching office and that confidence can never be restored, however fairly the despatching may now be carried out? . . . The only possible way by which confidence can ever be restored, to the mutual benefit of all concerned, will be found in turning over the despatching to the men themselves." The letter then advised that "Our mass meeting of April 25 endorsed a motion 'that the Association supply all longshore labour.' This motion is meant to cover the despatching of surplus men, and of course means further difficulties between us unless we can arrive at something definite in these negotiations."

On May 10 (Exhibit 18) the Federation replied to the Union's letter of May 3 and again sent a copy to every member of the Union. This was a very definite letter stating the position of the Federation.

(1) that it would not relinquish its right to control and direct waterfront operations, and to employ casual labour the same as had been done since the formation of the Union in 1924.

(2) that under no circumstances would the Federation be willing to delegate its right of despatching the men to the Union or to any other body.

(3) that stoppage of work, such as the three weeks' refusal to load logs on the North Shore, constituted a fundamental breach of the agreement.

The letter, rather unfortunately, I think, closed with an invitation to the Union "to offer some suitable financial guarantees that you will live up to and abide by the terms of the agreement. We insist on this as a condition to be complied with before we can see our way clear to resume negotiations on any of the points you have raised." Such an arrangement was said to be in effect at the port of Montreal between members of the Shipping Federation of Canada and the Association of Syndicated Longshoremen of the Port of Montreal.

On May 15 (Exhibit 38) the Union notified the Federation that at the regular General Meeting of the Association held on the 13th it was resolved—

"That no gang or individual of the Association shall be dismissed to make place for any other gang or individual unless the permission of the Association, through their officials, is first obtained, and should the em-

ployer violate this rule, the Business Agents be empowered to take the men off the job."

On May 23 (Exhibit 17) the Union notified the Federation that "Union despatch has again been brought into negotiation as the principal issue between the Association and the Federation" and that by a large majority vote of a mass meeting of the Union the Union had determined to put its own despatching system into effect on and after 7 a.m. Monday May 27. The letter closed with an offer to make "any further explanations which may be desired." The Federation replied on May 24 (Exhibit 26) that it was the duty of the men under their agreement to continue to report for work at the Federation despatching hall and to be despatched from there in accordance with the terms of the agreement. "We wish to notify you that should they fail to do so and there is a resultant stoppage of work, the agreement will no longer be in effect."

Then on May 27 (Exhibit 25) the Union addressed a letter "to all stevedores and dock operators" notifying them that "the Association is now definitely committed to Union despatching. Whether this will lead to a tie-up of shipping in this Port rests, to a very large degree, upon you, our actual employers." The significance of the letter is that the membership of the Shipping Federation is composed of 30 members, of whom 5 are stevedoring companies, 6 are dock operators and 19 are steamship owners or agencies. The letter was not sent to any of the 19 members and was obviously an effort to deal direct with the 11 stevedoring and dock operator members of the Shipping Federation.

May 27 was a critical date. The Union deliberately set up, or attempted to set up, its own system of despatching the men for work. It was a deliberate breach by the Union of the basic principle upon which the October agreement rested. The system failed to work because the stevedores would not send their orders for men to the Union despatcher but only through the regular despatcher of the Federation. The setting up by the Union of their own machinery for despatching men to work was so plainly in defiance of the existing agreement that the Union did not carry the proposal to the point of a tie-up or strike.

During the first week of the Enquiry the case for the Union turned mainly on the system of despatching, but later on the Union shifted its ground to other matters and, in the end, Emory, who was the leader for the Union, stated that the attempt to set up Union despatching was only intended as a handle to force the issue of the employment of extra

men from the basement for surplus work at time of peak loads.

May 27 was little over a week before June 4 when the break came. Up to May 27 it is plain that only two major issues were involved—surplus work and the despatching system—and they really involve one principle. Treating them as separate issues it is plain on the evidence that on neither issue could the Union justify a strike. Dealing first with surplus work. The agreement continued the established practice on the Vancouver waterfront to fix by registration in the Union the number of men who normally could expect regular and permanent employment. The number was fixed at 940 in October, 1934. To permit of too large a registration only results in a spread of the work over more men, with consequent diminution of the earnings of the individual men. There are inherent difficulties in the very nature of the case in reducing membership to actual normal requirements. Then, in order to satisfy the demands at times of peak loads (for longshore labour is of necessity, as acknowledged by the recitals in the October agreement, intermittent employment and subject at all times to fluctuating and uncontrollable periods of slackness and of peak loads) the employers are entitled to use casual labour, that is, men who are not regularly employed and registered as members of the Union. These men are called "basement men" or "extra men," and their work is termed "surplus work." This was the established practice since the Union was formed in 1924 and was clearly continued and intended to be continued by the provisions of the October agreement. In fact the Union plainly adopted this view itself after the making of the agreement when it urged upon the Federation the employment of members of its affiliated local, the Freight-Handlers' Association (Letter of November 23—Exhibit 73). There was no justification for the subsequent interpretation sought to be put upon clause 13 of the agreement of confining the employment of extra men to the Union (December 20—Exhibit 21). It was an utterly untenable position. I was impressed at first by the contention of the Union that the employment of extra men from the basement was used unfairly by the Federation to deprive the registered membership of the Union of their prior claim to preference, but this impression was dislodged when the actual figures produced in evidence showed that the amounts of the payroll of the Federation and the percentages received by the Union and the extra men respectively were as follows:

Year	Total Longshore Payroll	Percentage paid to Union Group
1925.. .. .	\$1,242,166 74	99.62
1926.. .. .	1,659,188 81	96.58
1927.. .. .	1,555,189 59	97.26
1928.. .. .	1,625,393 12	95.03
1929.. .. .	1,586,567 15	95.68
1930.. .. .	1,192,309 18	96.57
1931.. .. .	943,492 41	97.39
1932.. .. .	809,089 99	96.51
1933.. .. .	772,529 28	98.16
1934.. .. .	1,104,328 15	97.70

Moreover the list of men actually despatched from the basement (Exhibit 67) shows many of them were what are called "ex-employees" or "ex-card men," that is, men who have had longshore experience and have been at one time or another on the registered list of some longshoremen's union. Many of these men had been despatched more or less regularly from the basement during the last five, six or seven years. They were not used, or intended to be used, to break the Union as suggested. It is to be observed that, when the Union adopted the system in February of "O.K"-ing the slips of every basement man when despatched, and declined to permit its men to work with any basement men whose slip had not been "O.K"-ed, there was not a single man despatched from the basement by the Federation to whom the Union refused its O.K. This in itself refutes the contention that the basement men were improperly and unfairly despatched by the Federation. It is plain that when the Union found itself affiliated with other local unions, such as the Freight-Handlers, it sought to control the basement in order to give work to men of its affiliated unions and thereby strengthen the hand of the larger organization, the Longshoremen and Water-Transport Workers of Canada. As early as December 28 the Union refused to permit the basement dispatcher to send out three particular men and insisted upon three freight-handlers of their affiliated union being sent out. If the setting up of its own despatching system by the Union on May 27 was only intended to be a handle to force the issue in respect of the basement men, it was an issue which had no merit and could not have properly been forced to an issue.

Much of the evidence at the Enquiry was directed to the despatching system. That is a controversial question and the practices and theories relating to despatching involve a problem of longshore labour that probably has not yet been adequately settled, and upon which many honest differences of opinions may exist. The nature of the despatching system lies at the very root of the longshore industry and for years the world over has

been the subject matter of much experiment. The employees have always complained that an employer despatcher leads to much favouritism and unfair discrimination; the employer contends that employee despatcher carries greater dangers in this regard. In the earliest days the employer went down to the dock and picked his men from "the line up." Later, when the industry became larger, the employers adopted a registration list, to avoid the inconvenience and disturbance of a "line-up" of the men, and an "employer" despatcher was engaged for a group of the employers to despatch the particular registered men ordered out by the employers. This system, it is said by the men, led to favourite gangs being afforded much of the work, with consequent inequalities of opportunity and earnings among the men. The Shipping Federation frankly admitted this before me, but on the other hand stated that a system whereby the men rotate in turn without reference to individual efficiency, the squirrel-cage method, takes away initiative and substantially reduces efficiency, particularly where the registration list is too large for existing normal conditions, the classifications are diverse, and the experience and qualities of the workmen vary greatly. It was proved in evidence that at Victoria and New Westminster a union despatcher has worked successfully, but those ports have a much smaller registration of men (105 and 315 respectively), their cargo is very largely made up of lumber, and if gangs are of reasonable equal capacity I can understand that, with a fair-minded union man as despatcher, the system may work successfully in such ports. Mr. Melnikow, the American expert, favoured in theory a union despatcher and cited Tacoma as an illustration of the success of the system. But he admitted that Harris, the union despatcher there, has been acting as despatcher for a great many years and is a broad-minded fair type of man who by his very nature does not show favouritism or exercise discrimination. In the ultimate analysis I am satisfied that it is a human problem and that given the perfect man it would not matter whether the despatcher belonged to the Union or was employed by the employers. It is the inherent weakness and frailty of human nature that favouritism enters into the problem. Major Crombie, the labour manager of the Federation, believes out of his twelve years' practical experience that, having regard to the size of the port of Vancouver, the varied kinds of cargo loaded and unloaded there, a too large

registration list and the inequalities of the men as to experience and efficiency, a system of Union despatcher for the purpose of rotating the work in order and affording equal opportunities and equal earnings for the different gangs is not practical.

The point of the case so far as despatching is concerned is that the Union and the employers by their written agreement on October 10 committed themselves to a new and definite arrangement by way of a compromise, whereby, while the despatcher remained an employer appointment, access to the despatching office was given to an accredited representative of the Union so that the Union might keep close watch upon the daily despatches and if grounds for grievances were shown to exist they could be taken up by the Union with the Federation and either ironed out at once or made the subject matter of negotiation in accordance with the elaborate provisions for negotiation set up by the agreement. The Union business agents admitted to me that the daily run of routine complaints were taken up by the business agents and were ironed out as they arose. The October agreement further provided a curtailment of the prior right of the employers to call for favoured gangs, in an effort to meet halfway the demands of the men for equalization. To this new system of despatching the Union had as an organization solemnly committed itself by the agreement it made with the Federation on October 10, and the deliberate effort on May 27 to set up and operate its own Union despatching system was a definite repudiation of its agreement on the fundamental point of the agreement. That the question of despatching was not made the subject of a strike or tie-up is plainly seen from the very weakness of the case.

What then did result in the breakdown on June 5? What was the reason or what was the excuse for a tie-up of the longshore industry at the Port of Vancouver that has so seriously affected the shipping interests there for several months and has had its repercussions all over the Pacific Coast as far down as San Francisco and as far away as Sydney, Australia, with terror and disorder taking the place of industrial peace in Vancouver? It is what is known as the Powell River cargo. And the story is as short as it is simple. The Powell River Company Limited are manufacturers of newsprint on a very large scale at Powell River, B.C., about 70 miles up the mainland from Vancouver. The Company owns and operates its own mill and has its own townsite

and its own docks. The community is entirely land-locked; the only access being by the sea. Its total investment represents approximately seventeen millions, and its regular and permanent employees are between 1,500 and 1,600 persons, to whom an annual payroll of over \$2,000,000 is distributed. There is not the slightest evidence of any grievance or dissatisfaction among its large roll of permanent employees. From the commencement of its operations in 1912 until the year 1931 the Company used its own regular employees to load the newsprint on the vessels when they came intermittently into the docks of the Company. In the year 1931, due to the completion of certain large extensions to the Company's plant and to the general trade depression then existing, a number of men living in communities adjacent to the Company's townsite became unemployed and, in order to assist these men by giving them casual employment from time to time on the docks rather than relief, the Company began to use some of these men off and on as ships came in to be loaded. In all there were about 195 such men used at different times during the year ending May 16, 1935. Some of the work is what the Company calls "mill work" from the warehouse to the ship's slings, and other of this work is from ship's slings to at rest hold. Sometime in May some of these unemployed began to organize and were assisted and instructed by a representative named Robinson sent up from Vancouver by the longshoremen there. On the evening of May 16 fifty-one of these men met together secretly and formed what they called "The Powell River and District Waterfront Workers Association" and sought affiliation with the Longshoremen and Water-Transport Workers Association of Canada, of which the Vancouver Association was Local No. 1. These 51 men resolved to make demands upon the Company on the Monday following (the meeting was on a Thursday night) and to demand the same wages for longshore work as prevailed at Vancouver, recognition of their Union by the Company, and such other demands as they might decide upon. The Resident Manager of the Company, Mr. Falconer, whose evidence I entirely accept, said that he did not hear of this meeting and was not given a list of the 51 men, but he had heard that Robinson, the representative of the longshoremen at Vancouver, was in town attempting to organize these casual workers, when on the same Thursday night he gave orders to revert in the morning to the former practice of using only regular and permanent

employees of the Company to do the work at the docks. He said he was not taking any chances with men whom he knew to be trouble-makers.

The following morning, the SS. *Heian Maru* being in port, the wharf superintendent, notwithstanding the orders of his superior, but in good faith, accepted 16 of these casual workers who had been sent down by the time office and had reported for work, and he further picked up six other men standing on the dock whom he knew as good workers and gave them work. A number of others standing by on the dock, unemployed, probably fifty or seventy-five, were disappointed. Within a few minutes one of these, Balderson, went on the ship and called out something to the effect "all union men off the boat." Two men responded and left the ship. Three others did not proceed to their work on the ship. These were five of the six men picked up at the dock that morning. The sixth subsequently quit on grounds of illness. There had been no notification to or communication with the Company prior to this event by these men. The fifty-one men or some of them (only four of whom according to the evidence—Exhibit 57—had been on the regular payroll of the Company during any part of the past year and these had left the permanent service of the Company prior to May 17) held a meeting and at about 1.45 p.m. a committee of them attended at the office of Mr. Falconer, the Company's Resident Manager. He was busy at the time and had to leave the office on business. The men saw him on the way out but did not speak to him. They left this message with the Manager's secretary (Exhibit 55):

"We wish to notify you that the Powell River District Waterfront Workers Association is now officially on strike, and if the Company wants to communicate with our committee, phone 4437. Ernest McLeod is secretary."

Mr. Falconer did not telephone the secretary, but has never refused, he says, to meet the men. That is the story of Powell River.

At 1.47 p.m., almost the exact moment of the time above stated when the men were talking with Mr. Falconer's secretary, Robinson, the Vancouver representative of the longshoremen, telegraphed the following message (Exhibit 47) from Powell River to the Longshoremen and Water-Transport Workers of Canada at Vancouver:

"Powell River and District Waterfront Workers Association declared strike action on dock at Powell River demanding union

rates and conditions. Non-union labour being used to load ships. Notify all locals, Powell River Company has refused to see negotiating committee."

The Longshoremen and Water-Transport Workers of Canada then notified all their locals: (Exhibit 49).

"A wire from Powell River just received informs us that the longshoremen there have been locked out. The longshoremen have declared a strike against the Powell River Pulp and Paper Co. All ships from Powell River will be placed on the unfair list.

"Will you place this before your Executives as soon as possible, as the co-operation of all locals is necessary if the Powell River longshoremen are to win their demands."

Only two of the Powell River Union were called to give evidence before me. One was Keene, who said he did not commence to work till the latter part of February; he had been a commercial traveller and a taxi-cab driver and was out of work and went up to Powell River in search of work. The other was Balderson, who had not been a permanent employee of the Company since the summer of 1931, but had returned to Powell River November 5, 1934, in search of work, and had been given casual work from time to time on the docks. It was admitted that none of the fifty-one men who formed the Union had any agreement, either individually or collectively, entitling them to any work from the Company.

The Vancouver longshoremen made a direct issue of this Powell River incident. They refused on May 18 and 22 to unload the ss. *Heian Maru* when the ship came to Vancouver. Other ships were released on payment of differences in wages. On June 1 Emory, the President of the Longshoremen and Water-Transport Workers, gave a public statement to the Press (Exhibit 80) that

"All locals of the L. & W. T. W. have been requested by the organization to ask the Shipping Federation of British Columbia not to send any ships excepting those carrying mail, foodstuffs or baggage to Powell River. This request is followed by the declaration that after 5 p.m. on June 8 any shipping line so sending ships, against the embargo of the L. & W. T. W., will be declared unfair. 'We are not withdrawing the embargo' concluded Mr. Emory, 'and we will permit no more compromises for any ships. The matter is now up to the Federation.'"

On the same date, June 1, the Ship Lining and Fitting Workers Association (being Local No. 6) and the Seafarers Industrial Union (being Local No. 5) wrote the Shipping Federation (Exhibits 81 and 82) that any shipping line which sends a ship into Powell River after

5 p.m. on June 8 will be declared unfair and that all other ships operated by such shipping line will be declared unfair and will not be worked or serviced by these organizations. The Vancouver Export Log Workers Association (being Local No. 8) wrote a similar letter (Exhibit 83) to the Shipping Federation on June 5. But before the date fixed by the ultimatum, June 8, a scow of newsprint from Powell River lay aside the ss. *Anten* on June 4 in the Port of Vancouver to be transferred to that vessel. The gang of Vancouver longshoremen ordered to handle this cargo declined to do so, notwithstanding that the October agreement provided that there would be no stoppage of work except for reason of safety. That precipitated the matter.

The Union now contends before me that it was not a matter of collective action by the Union but merely the individual action of one gang. I am satisfied on the evidence that it was a concerted and deliberate action and that the Union officially and collectively refused to move that cargo. There was no denial by the Secretary of the Union of the evidence of Major Crombie, the Labour Manager of the Shipping Federation, that he asked him if it would be necessary to go through the procedure of calling out each gang one by one to ascertain if any of the men would work the *Anten*, as had been done previously in April in another case, and was told, No, that all the Union men would take the same stand. Major Crombie was entitled to act upon the authority of the Secretary.

The Union men continued that day, June 4, at their regular work, apart from their refusal to handle Powell River cargo. Later in the day the Shipping Federation accepted the action of the Union as a repudiation of the agreement and notified the Union that the Federation treated the agreement as at an end, as of that date, and gave notice thereof to the Union (Exhibit 11). The Federation posted a notice (Exhibit 13) that the agreement was at an end and that "work is available for longshoremen at prevailing rates of pay and men wishing to work should apply to the Labour Manager."

The morning of the next day, June 5, the Union men reported for work as usual, some had even reached the docks, when they were called off work by their officials. The strike became an established fact.

On June 6 the Longshoremen and Water-Transport Workers issued a letter to all its locals reading as follows (Exhibit 46).

"To all Locals

"Greetings.

"Dear Fellow Workers:

"The Mass Meeting of the V. & D. W. W. A. Local No. 1 last night requested our Central organization to ask all locals to take a general strike ballot, and hold themselves in readiness at the call of the Central Board, should a General Strike be necessary.

"As you are aware, this lockout is an attack on Labour Organizations in general, and unless we are successful all our organizations will be wrecked.

"Thanking you for your co-operation to date and trusting full support."

Within a few weeks the Port of Vancouver was in the midst of a general strike caused by the sympathetic strikes of all—but one as I recall—of the affiliated Unions of the Longshoremen and Water-Transport Workers. Deep sea and coastline vessels, freight and passenger boats, were all affected. Some 2,500 men, longshoremen and seamen whose Unions were affiliated with the Longshoremen and Water-Transport Workers of Canada, went out on strike, 1,500 of whom had no grievances with their employers but were out on sympathetic strike. Press reports while I was holding the Enquiry indicated a very serious condition in San Francisco owing to longshoremen there refusing to handle Powell River cargo, and even as far away as Sydney, Australia, it was reported that seamen were objecting to take their vessels to Vancouver.

To what then is to be attributed this widespread and disastrous condition? The facts of the Powell River incident cannot justify it. Quite apart from the legal position that the contract forbade stoppage of work except for safety, there is neither substance nor merit in the Powell River matter. What then is the explanation? I have searched diligently to discover any real facts that could fairly justify the commencement or continuance of this extraordinary condition on the Pacific Coast. At Alberni, on Vancouver Island, there are between 150 and 200 longshoremen working at the same wages and on the same working conditions as prevailed in Vancouver. They are an organized Union and yet they have not gone on strike. Their Union is affiliated with the All-Canadian Congress of Labour and it is contended that this is evidence of a saner leadership and that labour organization in the best sense of the term would not lend itself to the support of the Vancouver group. There might be very little in that contention if the Alberni situation stood alone. It is further emphasized, moreover, that the Vancouver group is not affiliated with the Vancouver Trades and Labour Council, which is in turn affiliated with the American Federation of Labor, and that it broke its

affiliation in April, 1934, with the All-Canadian Congress of Labour.

In the letter of the Secretary of the Central Strike Committee of August 29, 1935, to the Minister of Labour (Exhibit 43), it is stated,

"... we are therefore forced to the conclusion that the lockout was a premeditated attack on us planned for the reason that we were on the point of affiliating with our brother maritime workers to the south of the international boundary... and even now we can see the attack on the Maritime Federation of the Pacific Coast taking shape in the propaganda being published in the press of the Pacific Coast now."

In this connection, it is in evidence that two Seattle fraternal delegates came up to Vancouver on invitation at the time of the formation of the Longshoremen and Water-Transport Workers of Canada in April, 1934. Counsel for the Federation called as a witness one, Foisie, of San Francisco, who is Co-ordinator for the Waterfront Employers' Association in the several American ports on the Pacific Coast. Prior to this appointment he was identified with the waterfront at Seattle. He has had fifteen years' experience with waterfront labour problems. Foisie spoke in no uncertain terms of the American organization known as The Maritime Federation, with which the Vancouver longshoremen had been "on the point of affiliating," and of its leadership, naming specific individual officials of that organization and asserting the opposition of recognized labour organization to their leadership. In very strong and plain language he attacked this Maritime Federation as being led by left-wingers. Pressed by Emory, who was conducting the case for the Union, Foisie defined a left-winger as a person who wants a disturbance amounting to a revolution and believes that is the first requirement of social reconstruction—a person who will not and cannot reconcile himself to organized labour—one who cannot deal on a contractual basis and maintain the contract. The charges made by Foisie were so definite and specific that Emory at once asked to be allowed to bring a witness from San Francisco to answer these charges. I stated that he had a perfect right to do so and a few days afterwards I permitted the case for the Shipping Federation to be interrupted to permit the Union's witness from San Francisco to be conveniently called at that time. The witness was Melnikow, to whose evidence I have referred above.

Melnikow was a capable and moderate witness who appeared to thoroughly understand the problems of the longshore industry on the American side. I was much

impressed with his evidence. And yet Emory, who called him, did not ask him a word that I recall about the Maritime Federation, its activities or its leadership.

It was proved in evidence that the printed Constitution of the Vancouver and District Waterfront Workers' Association, effective January, 1932 (Exhibit 63a), contained, in Section 2, defining the objects of the Association, the following clause:

"(g) To support the existing form of Government of Canada and resist all revolutionary movements."

and that when the Constitution was revised and reprinted, effective August 10, 1934 (Exhibit 63b), this clause (g) was stricken out. Emory, the leader of the men, stated very frankly that personally he had supported the deletion of this clause. There would have been no significance had such a clause never appeared in the Constitution, but its deliberate omission in 1934 from the 1932 Constitution may be significant in the light of the evidence of Major Crombie, the Labour Manager of the Shipping Federation, and Captain Crawford of the Empire Stevedoring Company, that they had noticed a distinct change in leadership among the men.

During the Enquiry I had the opportunity to observe hundreds of the Vancouver longshoremen as they attended the public hearings. On the whole they impressed me as a good group of men. In fact the Shipping Federation officials acknowledged that at least 600 of them were good decent fellows. There being no merit or substance in the position taken by these men, and their course of conduct being subversive of the sound principles of organized labour, I cannot escape from the view that the real cause of the trouble lay with the leadership that had gained the ascendancy in the ranks of the men. I was told by one of the leaders of the men that anyone who seeks to advance the cause of labour is denounced. That is not so. Leadership that seeks moderately and fairly to overcome real grievances of the workmen is quite legitimate and well recognized. Leadership that deliberately repudiates contracts made by organized labour through collective bargaining and recklessly creates trouble and calls strikes for their destructive effect is not legitimate leadership.

At the conclusion of the public hearings I was informed that 143 out of the 927 men of the Vancouver Union had already gone back to work. Eighty-three old longshoremen, ex-employees as they are termed, and 655 new men, together with the 143, making 881 in all, were registered for work. That is the picture after more than four months of the general strike. The practical difficul-

ties presented with nearly 1,700 men now seeking work, where a normal registration of about 900 would be sufficient, are apparent to anyone seeking a settlement. Moreover there are some 1,500 seamen, freight-handlers, ship liners, log workers, etc., of affiliated unions out on sympathetic strike. This forces the conclusion that some speedier method than now exists for the adjustment of labour disturbances and more governmental control of such disturbances at the moment they arise has become a subject matter for thoughtful consideration.

I am not forgetful of the evidence of Coyle, who has worked on the Vancouver waterfront for the past 25 years and appeared to me to be representative of the best type of longshoremen, that if the employers, the Shipping Federation, had given the men on June 4 a day or two to think the matter over, their course of conduct might have been different. A careful review of the evidence has satisfied me that the stage was so set by the leaders of the men, and the men so much under their influence, that what otherwise might seem harsh and abrupt action by the Shipping Federation was under all the circumstances necessary for the assertion of their rights and the preservation of their interests.

I therefore find:

(1) That the direct and immediate cause of the serious industrial condition that has existed on the Vancouver waterfront since June 5 of this year was the refusal of the longshoremen of the Vancouver and District Waterfront Workers' Association to handle newsprint from the Powell River Company Limited upon the ground that it was unfair cargo.

(2) That the three-year agreement of the longshoremen with their employers, the Shipping Federation, made October 10, 1934, expressly provided that there should be no stoppage of work except upon the grounds of safety. No question of safety was raised or even suggested.

(3) That the refusal to handle the Powell River cargo was a deliberate breach of the existing agreement by the longshoremen which entitled the Shipping Federation to declare the agreement at an end on June 4.

(4) That quite apart from the question of law arising out of the agreement, the Powell River cargo was not as a matter of fact unfair cargo in any proper sense of the term.

(5) That there was no strike or lock-out of any of the employees of the Powell River Company Limited on May 17 and that the Powell River Company Limited was not unfair to labour.

(6) That the longshoremen of the Vancouver and District Waterfront Workers' Association in concerted action refused to handle Powell River cargo and their course of conduct constituted a deliberate strike on their part and they were not "locked out" as they have maintained.

(7) That the local unions of longshoremen, seamen, freight-handlers, ship liners and log workers in affiliation with the Vancouver longshoremen to the extent of about 1,500 additional men went out on strike in sympathy with the Vancouver and District Waterfront Workers' Association; that none of these local affiliated unions had any dispute with their own employers and made no proper and sufficient enquiry into the real facts of the longshoremen's dispute at Vancouver to entitle them fairly to go out in sympathetic strike.

(8) That the distribution of surplus work among the "extra" or "basement men" by the Shipping Federation was consistent not only with the provisions of the existing agreement but with the established practice on the Vancouver waterfront and was not unfairly or improperly exercised by the Shipping Federation against the members of the Vancouver and District Waterfront Workers' Association.

(9) That the Association had, by its agreement made with the Shipping Federation, expressly sanctioned the continuance for another three years of the system of employer-despatching with certain provisions for co-operation by their accredited representatives, and the definite and deliberate setting up of their own system of despatching in May of this year was in defiance of one of the fundamental points covered by the agreement.

(10) That the longshoremen of the Vancouver Association failed to realize or appreciate that the right of collective bargaining which had gained for them their agreement involved a corresponding duty of collective adherence to and performance of the bargain they made.

(11) That the strike of the Vancouver Association and the sympathetic strikes of the affiliated unions were contrary to the principles and best interests of sound labour organization.

(12) That the great majority of the Vancouver Association were misled in their course of action throughout by unsound and destructive leadership.

(Sgd.) H. H. DAVIS.

October 22, 1935.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of seven cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, July, 1935, page 616, and in previous issues.

The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925 (the date of the inception of the Board), to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working con-

ditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made, in the agreement constituting the Board, for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award.

### Case No. 156—Operating Department (Atlantic Region)

Prior to March 20, 1934, the station porter at Rivière du Loup was given a call on Sundays and holidays to do whatever cleaning and dusting was necessary to give the station a presentable appearance. (This was in addi-

tion to his regular daily duties of attending the furnace, cleaning waiting rooms, etc.) On the above date the agent instructed the call boy that it would be his duty thereafter to clean the station waiting rooms on Sundays and holidays. During his period of employment since receiving the foregoing instructions, the call boy has put in one hour each Sunday and legal holiday performing this part of the duties of station porter. For this service he claimed the rate paid the regular employee for performing this service in accordance with Article 11, Rule (b) of the Schedule.

The case was heard on November 20, 1934, but was referred back to the parties for further information. The Board was advised that a satisfactory settlement had been reached, and request for withdrawal has been acceded to.

#### **Case No. 158—Operating Department (Central Region)**

This case originated with a grievance respecting the seniority accorded a clerk in the wharf freight office, Montreal. The clerk was employed by the Montreal Warehousing Company (a subsidiary of the Railway) from March 31, 1913, until May 1, 1923, and was then transferred to the payroll of the wharf freight office staff. Since the latter date he was employed as a cashier at the foreign freight agent's office.

According to the employees' statement this clerk was shown on all seniority lists up to 1933 with seniority date of May 1, 1923. In 1933 his seniority was changed to read March 31, 1913, without knowledge or consent of the employees.

The position of cashier (\$140 per month) which this clerk is filling is enumerated in the schedule for "clerks and other classes of employees."

The employees contended that Article 3, rule (b) provides that the seniority of an employee shall count from the date of last entering the service in a position of the staffs covered by the schedule aforementioned. The employees further contend that prior to May 1, 1923, this clerk was not an employee within the meaning of Article 1, rule (b) of the schedule: and that in view of the provisions of these two rules this clerk is entitled to seniority under the schedule for "clerks and other classes of employees" from May 1, 1923, only.

The railway's contention was that this employee entered the service of the Montreal Warehousing Company on March 31, 1913, as clerk, being subsequently promoted to assistant cashier in March, 1917, ultimately replacing the cashier in 1920, and occupying that position ever since.

On April 11, 1923, all facilities owned and operated by the railways and located on Montreal Commissioners' property were sold to them *en bloc* including elevator B. This cashier and a clerk and an office boy, who, at the time, were looking after grain shipments, were transferred to the Montreal wharf payroll and located, for the convenience of the trade, in the foreign freight agent's office and included in the wharf agent's seniority list.

The railway further contends that as the person in question, when transferred to the Montreal wharf office group brought his work with him and did not displace anyone employed in that group, he should therefore have been shown on the seniority list with a seniority date of March 31, 1913, but owing to the fact that the Staff Record Bureau had not confirmed his service from that date, and the parties preparing the seniority list apparently being of the opinion that the service date and the seniority date should coincide, his name was shown on the seniority list with a seniority date of May 1, 1923, the date on which he was transferred to the wharf office group, until his service record was reviewed in 1931 by the Staff Record Committee and service confirmed from March 31, 1913.

The Board was recently advised that the claim has been settled on the basis that the clerk is to appear on the seniority list with a date of May 1, 1923, but that no one will be permitted to displace him from his present position who has a date subsequent to March 31, 1913.

#### **Case No. 161—Sleeping and Dining Car Services (Central Region)**

This case involved the claim of parlour car porters on trains 14-562-558 and 555-563-5 (Toronto, Brockville and Ottawa) for additional monthly relief.

Prior to May, 1933, according to the employees' statement, the Canadian National Parlour car train service between Toronto and Ottawa was operated daily, except Sunday, with two porters who were on duty in each round trip for 16 hours and 30 minutes. The total number of hours on duty for each porter, per 26-day month, was 214 hours and 30 minutes.

Since March 11, 1934 (when a pool service was inaugurated), the two parlour car porters assigned to the run were on duty, each round trip, 20 hours and 50 minutes, the hours of duty for each porter per month of 26 days being 270 hours and 50 minutes—a substantial increase in working time without compensation.

The management was requested to give the porters assigned to this run four days monthly relief each, which would reduce their time on duty to 239 hours and 10 minutes—or an increase of 24 hours and 40 minutes per month over the assignment which was in effect up to May, 1933.

The employees contend that: "The request for four (4) days' monthly relief for each of the employees assigned to this run was made in accordance with Article 4, Rule (b) of the Sleeping and Dining Car Employees' Schedule. The intent of that rule is to maintain the established hours of duty on the respective runs, and should the hours of duty on the run be increased, arrangements are made to give the employees additional monthly relief or layover at home terminal. This intention is more clearly expressed in Article 4, Rule (c) of the aforementioned schedule, and has been the practice for a number of years past."

The employees further requested that compensation be made retroactive to March 11, 1934.

The railway's contention is that on March 7, 1934, in accordance with Rule (b) of Article 4 of the schedule, the Superintendent at Toronto conferred with the Employees' Committee and it was mutually agreed that two parlour car porters would be assigned to the new service, with all Sundays off and no monthly relief.

Under the date of August 3, 1934, the general chairman of the employees' committee addressed a letter to the General Superintendent of Sleeping and Dining Car Services, making request that the two porters assigned to this run be given four days' monthly relief. This request was not granted and the general chairman was advised and it was considered that these porters now have very favourable working conditions, and that additional help was not justified.

This case was heard on November 20, 1934, but referred back to the parties. The Board is now advised that a satisfactory settlement has been reached, and request for withdrawal has been acceded to.

#### **Case No. 162—Sleeping and Dining Car Services (Central Region)**

A porter claimed wages short paid for service on dead-head movements between Toronto and Winnipeg. According to the employees' presentation of the case, the porter had left Toronto March 24, at 10.50 p.m. in charge of two tourist cars dead-headed to Winnipeg. He arrived in Winnipeg on March 26 at 8.45 a.m., and was ordered to return to Toronto on a pass that same

evening by a train leaving at six o'clock, and arriving in Toronto at 7.15 a.m. on March 28. For the round trip he was paid three and one-half days' wages at *pro rata* rate.

On a later occasion, he was on a similar service on a run from Hornpayne to Winnipeg and back to Toronto for which he was paid three and one-half days' wages at *pro rata* rate. The employees contended that on each trip he was in charge of cars fully equipped for use if necessary, and that on each of these round trips he should be paid eight days' wages in accordance with Clauses 6 and 3 of the agreement respecting hours of service, layover, dead-head service and compensation of extra or stand-by porters, dated November 1, 1933.

The contention of the Railway was that in both cases the porter was assigned to dead-head cars which could not be used in service as they were placed between the engine and the baggage car. Therefore the porter was paid wages in accordance with clause 7 of the agreement, reading as follows:

"A porter assigned to dead-head a car which cannot be used in service, shall be paid *pro rata* wages from time of departure from, to time of arrival at, home terminal."

This case was heard at the November, 1934, meeting but it was referred back to the parties as the Board saw a possibility of a mutual agreement being reached. This has now been effected, and in consequence request for withdrawing this case from the Board has been acceded to.

#### **Case No. 163—Sleeping and Dining Car Service (Central Region)**

This case was on a somewhat similar basis as Case No. 162, outlined above, and involved the same employee. There was a difference of opinion as to the interpretation of Clause 7 of the agreement (quoted in Case No. 162) respecting hours of service, layover, dead-head service, and compensation of extra or "stand-by" porters. The porter was paid *pro rata* wages based on a twenty-four-hour day, while the employees contended that there was nothing in the sleeping and dining car employees schedule "which would indicate or infer that an employee would be required to work twenty-four hours to earn one day's *pro rata* wages," and that therefore the porter was entitled to *pro rata* wages based on a twelve-hour day.

The matter was referred back to the parties concerned, and a mutual agreement having been effected, the case was withdrawn.

### Case No. 166—Sleeping and Dining Car Services (Western Region)

Two porters left Vancouver on April 29, 1934, and owing to delays *en route* arrived late at Edmonton. They continued their trip east arriving at Winnipeg May 2, 1934, sixteen and one-half hours subsequent to their regular scheduled arrival time had they operated without interference. They were paid overtime for late arrival in accordance with Article 6, Clause (a) of the Employees' Schedule.

For the first twelve hours overtime they were paid one day's *pro rata* wages, and for the remaining four and one-half hours they were paid *pro rata* hourly rate determined by dividing the monthly rate by 240. The employees claimed that under the ruling above mentioned no provision is made for paying an employee two different rates of overtime, for the one continuous period of overtime service performed; that once an employee exceeds twelve hours late arrival overtime, that he must be paid *pro rata* hourly rate on the "minute basis" for the entire time he is late in arriving at the terminal, and that such *pro rata* hourly overtime rate is determined by dividing the monthly rate by 240 hours as stated in the said rule.

In its statement the Railway declared that the employees have been paid on the same basis as all other such cases have been settled since the first schedule covering payment of overtime for late arrival was adopted in 1919. The railway, in contending that the proper interpretation of the ruling had been applied, stated:—

"In applying this interpretation all employees are paid on the same basis for late arrival, which would not be the case if they were paid in accordance with the claim as submitted, viz., an employee arriving on train that was 11 hrs. 50 minutes late would be paid on one basis, while an employee arriving on a train 12 hrs. 10 minutes late would be paid on a different basis. In this connection it has never been the intention in any rule governing the payment of overtime for the basis of application to benefit one employee as against another, but to pay such compensation on a basis equitable to each and every employee."

The Board referred the case to the disputants for additional information as to the method used in the past for settling such claims, and as further evidence indicated that such claims have always been paid according to the railway's contention, the claim of the employees was denied.

### Case No. 171—Stores Department (Atlantic Region)

Employees of the Stores Department, Moncton, claimed that seven employees (who were named) were being credited with more seniority than they were entitled under Article 3, Rule "B" of the schedule for clerks.

The Stores Employees protested the seniority dates credited to the seven named employees, and in each case the credited seniority date was shown in relationship to the date which the Stores Employees considered was correct under the schedule.

In its decision, the Board ruled that in four of the cases the seniority date should correspond with the date submitted under the schedule.

No change was made in one case, while in another the Board established the seniority date. In the seventh case the Board reserved decision, and referred the matter to parties to confer further.

Work performed by 24 establishments in Canada engaged in the dyeing and finishing of textile goods in 1934 was valued at \$3,778,652, an increase of \$603,603 or 19 per cent over the value in 1933. As indicated by the output, conditions in the industry improved materially last year. The number of employees was increased by 76 or 8.8 per cent while the total paid in salaries and wages was \$76,970 or 9 per cent higher. There is little or no seasonal variation in employment in this industry. A great majority of the wage earners are male and number 650, while the female wage earners total 142. The average wage was \$789 as compared with \$777 in 1933 but the average salary dropped from \$2,154 in 1933 to \$2,069 in 1934.

Officials of the Quebec Association for the Prevention of Industrial Accidents, which operates under the Province of Quebec Workmen's Compensation Commission, have announced that a series of round table talks will be opened shortly for the benefit of employers.

The general manager of the association, Col. Arthur Gaboury, will visit various industrial centres of the province each month and will preside at luncheon meetings of employers of the district. At these meetings many phases of industrial accident prevention will be discussed and the various articles of the law will be explained to the employers. The general manager will also show the employers the costs of accidents and will explain to them how these costs affect each and every one of the employers in the various classes of industry.

## STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1935

THE following table shows the number of disputes, workers involved and time loss for October, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Oct., 1935.....	19	3,566	35,279
*Sept., 1935.....	18	5,691	48,351
Oct., 1934.....	19	5,993	50,244

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The time loss in man working days and the number of workers involved in strikes and lockouts during October were less than in September, although there was a slight increase in the number of disputes, as there were no stoppages involving large numbers of workers for considerable periods, except the strikes of longshoremen and other water transport workers at Vancouver and other Pacific ports which began in June. There were also decreases in numbers of workers and in time loss for October as compared with October last year when two strikes of loggers in northern Ontario and a strike of coal miners in Cape Breton Island involved relatively large numbers of workers for some time.

Eleven disputes, involving 2,865 workers, were carried over from August, including a dispute involving coal miners at Broughton, N.S., which was reported to the department too late for inclusion in the October issue of the LABOUR GAZETTE. Eight disputes commenced during October. Of these nineteen disputes, thirteen terminated during the month, five being in favour of the workers involved, four in favour of the employer concerned, compromise settlements being reached in three cases, while the result of one was recorded as

indefinite. At the end of October, therefore, there were on record six disputes recorded as strikes or lockouts, namely: longshoremen, Powell River, B.C.; longshoremen, Vancouver, B.C.; water transport workers, Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.; cap factory workers, Winnipeg, Man.; custom tailors, Toronto, Ont.; and moulders, Oshawa, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer; motion picture projectionists, Winnipeg, Man., Sept. 1, 1935, two employers; and composers, Winnipeg, Man., April 7, 1935, one employer, this last being added this month.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute involving six bricklayers occurred at Lambton Mills, Ont., on October 7. Certain employees engaged by the contractor at standard wages on the construction of a school ceased work, objecting to an arrangement under which local labour employed on the job was paid only part wages, the balance being charged against relief. The job was completed by local labour without any change in the conditions.

A cessation of work in one coal mine at Wayne, Alta., early in September, to secure payment of wages due, was noted in the October issue of the LABOUR GAZETTE. Information later received indicated that eighty employees were involved and the strike lasted from September 7 to September 12, when arrangements for payment were made.

A dispute, about the middle of October, involving pulpwood cutters in the district around Chicoutimi, P.Q., demanding increases in pay, has been reported but particulars have not been received.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, DRUMHELLER DISTRICT, ALTA.**  
—As stated in the LABOUR GAZETTE for October, this dispute was settled in one of the three mines involved on September 14 and in the other two early in October. The operators involved signed agreements with the United Mine Workers of America providing for the five per cent increase in wages as recommended in the award of a Board of Conciliation and Investigation established under the Industrial Disputes Investigation Act. This had already been accepted by most of the other operators in the district.

**COAL MINERS, BROUGHTON, N.S.**—Employees in one mine, being developed, ceased work on September 21 demanding wage increases. The minimum rate having been raised, following negotiations between the parties, from \$2 per day to \$2.50, work was resumed about Octo-

ber 16. Information as to this dispute was not received in time for publication in the October issue of the LABOUR GAZETTE.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—This dispute involving employees in twelve establishments on strike since September 25, was terminated on October 15, an agreement being signed between the Shoe and Leather Workers' Industrial Union of Canada and the Shoe and Slipper Manufacturers' Protective Association. This provided for a forty-four hour week and minimum rates of pay per hour for piece workers as well as time workers. The terms of the agreement are outlined elsewhere in this issue.

**MOULDERS, MECHANICS, ETC., WELLAND, ONT.**  
—As stated in the LABOUR GAZETTE for October, this dispute was terminated on October 7,

#### STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1935\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in progress prior to October, 1935.			
<b>MINING, ETC.</b>			
Coal miners, Drumheller, Alta...	250	1,000	Commenced Sept. 5, 1935; for increased wages; terminated October 4, 1935; in favour of workers.
Coal miners, Broughton, N.S....	27	350	Commenced Sept. 21, 1935; for increased wages; terminated Oct. 15, 1935; in favour of workers.
<b>MANUFACTURING—</b>			
<i>Boots and Shoes—</i>			
Shoe factory workers, Toronto, Ont.	400	5,000	Commenced Sept. 25, 1935; for union agreement with reduced hours; terminated Oct. 15, 1935; in favour of workers.
<i>Printing and Publishing—</i>			
Compositors, Calgary, Alta...	22	500	Commenced Jan. 10, 1935; against decrease in wages; employment conditions no longer affected by end of October, 1935; in favour of employer.
Compositors, Winnipeg, Man...	43	1,000	Alleged lockout; commenced April 7, 1935; re employment of members of one union only; employment conditions no longer affected by end of October, 1935; in favour of employer.
Compositors, Calgary, Alta...	20	500	Alleged lockout; commenced July 8, 1935; re employment of members of one union only; employment conditions no longer affected by end of October, 1935; in favour of employer.
<i>Metal Products—</i>			
Moulders, mechanics, etc., Welland, Ont.	592	3,552	Commenced Sept. 26, 1935; for hourly increase in wages to offset reduced hours; terminated Oct. 7, 1935; compromise.
<i>Other Wood Products—</i>			
Furniture factory workers, Toronto, Ont.	13	100	Commenced May 16, 1935; alleged violation of agreement; employment conditions no longer affected by end of October, 1935; in favour of employer.
<b>TRANSPORTATION—</b>			
<i>Water—</i>			
Longshoremen, Powell River, B.C.	65	1,000	Commenced May 17, 1935; for union recognition and union wage scale; unternminated.
Longshoremen, Vancouver, B.C.	700	10,000	Commenced June 5, 1935; against cancellation of agreement; unternminated.
Coastal longshoremen, ships' crews, ship liners, boom log workers, etc., Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.	733	10,000	Commenced June 15, 1935; in sympathy with longshoremen on strike at Vancouver from June 5, 1935; unternminated.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1935\*—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts commencing during October, 1935.</b>			
<b>MINING, ETC.—</b>			
Coal miners, Wayne, Alta. ....	150	450	Commenced Oct. 1, 1935; against refusal of employer to accept checkweighman elected; terminated Oct. 3, 1935; indefinite.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
‡Flour mill workers, Port Colborne, Ont.	100	100	Commenced Oct. 16, 1935; for increase in hourly rates to offset reduction in hours; terminated Oct. 16, 1935; in favour of workers.
Canning factory workers, Burlington, Ont.	21	42	Commenced Oct. 21, 1935; against change to piece work system; terminated Oct. 22, 1935; compromise.
<i>Textiles, Clothing, Etc.—</i>			
Cap factory workers, Winnipeg, Man.	27	270	Commenced Oct. 21, 1935; alleged violation of agreement as to wages and "closed shop"; un-terminated.
Customs tailors, Toronto, Ont.	6	18	Commenced Oct. 29, 1935; for increased wages; un-terminated.
<i>Other Wood Products—</i>			
Saw and planing mill workers, Fort Frances, Ont.	300	1,050	Commenced Oct. 5, 1935; for eight hour day; terminated Oct. 9, 1935; compromise.
<i>Metal Products—</i>			
Moulders, Oshawa, Ont. ....	47	47	Commenced Oct. 31, 1935; against discharge of employee; un-terminated.
<b>TRANSPORTATION—</b>			
<i>Local—</i>			
Truck drivers and helpers, Toronto and Hamilton, Ont.	50	300	Commenced Oct. 21, 1935; against reduction in wage rates for helpers; terminated Oct. 26, 1935; in favour of workers.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

‡This dispute, included in this list since June, 1935, has been declared, in the report of the Royal Commission, not to have been a strike or lockout, page 982. †Stoppage to negotiate dispute.

a settlement having been reached through the mediation of the Ontario Department of Labour providing for a compromise on the wage increases demanded when hours were reduced to eight per day. Labourers' pay was advanced from 30 cents per hour to 35 cents with graded increases for other classes.

**LONGSHOREMEN, VANCOUVER, B.C.**—On the completion of an inquiry by the Honourable Mr. Justice Davis of the Supreme Court of Canada, as a Royal Commissioner appointed in accordance with the provisions of the Industrial Disputes Investigation Act, negotiations for a settlement of this dispute and the sympathetic strike of other water transportation workers in Vancouver and other ports took place, but a settlement had not been reached at the end of the month. The report of the Commissioner is published elsewhere in this issue. During October, in connection with picketing, a number of persons were arrested on charges of assault, carrying firearms, rioting, etc. Early in the month longshoremen at San Francisco agreed to handle cargo

to and from British Columbia ports involved in the dispute.

**COAL MINERS, WAYNE, ALTA.**—Employees in one mine ceased work on October 1 owing to a dispute as to the election of a checkweighman. Work was resumed on October 4 pending further inquiry.

**FLOUR MILL WORKERS, PORT COLBORNE, ONT.**—Certain workers in one establishment ceased work on October 16, proposing an increase in hourly wages when hours were reduced from ten per day to eight. After an eight hour interval work was resumed when hourly wages were raised to offset the reduction in hours.

**CANNING FACTORY WORKERS, BURLINGTON, ONT.**—The female employees in one establishment ceased work on October 21 against the introduction of piece work instead of hourly wages. At the suggestion of the local members of the Parliament of Canada and the Ontario Legislative Assembly negotiations between the strikers and the management were entered into and a settlement was reached

providing for a bonus to bring earnings of pieceworkers up to the minimum rates of pay under the regulations of the Ontario Minimum Wage Board.

**CAP FACTORY WORKERS, WINNIPEG, MAN.**—Employees in one establishment ceased work on October 21, alleging that the employer was not complying with the terms of an agreement, previously signed with the United Hatters' Cap and Millinery Workers' International Union, as to wages and closed shop. In connection with picketing a small number of persons were reported to have been arrested on charges of intimidation on October 30. Early in November it was reported that a compromise on wages was reached and work was resumed.

**CUSTOM TAILORS, TORONTO, ONT.**—Employees in one establishment ceased work on October 29, the proposal of the Toronto Local of the Journeymen Tailors of America for an increase in wages, piece rates, having been refused after several conferences. At the end of the month a settlement had not been reached.

**SAW AND PLANING MILL WORKERS, FORT FRANCES, ONT.**—Employees in one establishment ceased work on October 5 demanding a

reduction in hours from ten per day to eight with no reduction in daily wages. As a result, of conciliation by the Honourable Peter Heenan, Minister of Lands and Forests for the Province of Ontario, a settlement was reached providing for the eight hour day but with the same hourly rate of pay as before and work was resumed in the planing mill on October 9 and in the sawmill on October 10. The agreement with the Sawmill Workers' local of the United Brotherhood of Carpenters and Joiners is outlined elsewhere in this issue.

**MOULDERS, OSHAWA, ONT.**—Employees in one foundry ceased work on October 31 demanding the reinstatement of one employee dismissed for misconduct, the employees alleging discrimination. The dismissed employee being reinstated after making an apology, work was resumed on November 5.

**TRUCK DRIVERS AND HELPERS, TORONTO AND HAMILTON, ONT.**—Employees of one firm ceased work, in protest against a reduction in the wages of the helpers from 30 cents per hour to 25 cents on long distance work. It appears that wages were paid for twenty hours per day, provision being made for ten hours sleep and ten hours work. Work was resumed on October 28, the wage reduction having been cancelled.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, in the review of Strikes and Lockouts in Canada and Other Countries, 1934. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in September was 42 and 16 were still in effect from the previous month, making a total of 58

disputes in progress during the month, involving 33,800 workers with a time loss of 129,000 working days for the month.

Of the 42 disputes beginning in the month, 2 were over proposed wage reductions and 13 over other wage questions, 14 were over questions respecting the employment of particular classes or persons, 9 over other questions respecting working arrangements and 3 over questions of trade union principle. One stoppage was due to sympathetic action. During the month, settlements were reached in 36 disputes, of which 7 were settled in favour of workers, 18 in favour of employers and 11 resulted in compromise settlements. In 7 other disputes, work was resumed pending negotiations.

A strike of 14,500 coal miners in various collieries in South Wales began September 30 over the employment of non-union workers. Work was resumed in some places the same day and in others on October 5 and the last on October 9. Later, on October 12, about a hundred miners at one mine went on strike, remaining down in the mine for eight days. Several thousand miners at other collieries

in South Wales went out on strike in sympathy with them, some of these also remaining below ground. The strikers at that mine were later successful in their demands for the discharge of the non-union workers. Many more miners in South Wales went out on strike about the same time for an increase in wages of two shillings per shift. It was reported on October 18 that an estimated number of 30,000 miners in all were out on strike in South Wales.

#### United States

The number of disputes beginning in August was 185 and 139 were still in progress from the previous month, making a total of 324 disputes in progress during the month, involving 124,000 workers with a time loss of 1,026,000 working days for the month.

The strike of bituminous coal miners in various parts of the United States, which commenced on September 23, as noted in the last issue of the *LABOUR GAZETTE*, was settled at the end of September except in Tennessee, Virginia and Harlan County, Kentucky, in which states 24,000 miners remained on strike. On October 1 however, a settlement was reached in Virginia, providing for increased wage rates. The strike of coal miners in Alabama which also began September 23, was still in effect at the end of October.

A strike of several thousand longshoremen at Gulf of Mexico ports began October 1 and was still in effect at the end of the month. Their demands were for union recognition and higher wage rates.

### TRADE UNIONISM IN CANADA

#### Summary of Twenty-fourth Annual Report on Labour Organization in Canada

**C**ONTINUING the reports on Labour Organization in Canada, which were started in 1911, the Department of Labour through its Labour Intelligence Branch has published recently the twenty-fourth in the series, covering the calendar year 1934. As usual the report endeavours to give particulars concerning every known labour body in Canada, as well as associations of wage earners, who, though not connected with the trade union movement, are considered important enough to warrant reference. There are chapters devoted to the formation, affiliations and numerical standing of the principal central labour organizations in Canada, such as the Trades and Labour Congress of Canada; All-Canadian Congress of Labour; National Catholic Unions; One Big Union; Amalgamated Mine Workers of Nova Scotia; Industrial Workers of the World. Other chapters deal with revolutionary organizations; organizations of workers throughout the world; registration of trade unions and union labels; the labour press and trade union conventions. The labour organizations in Canada are placed in two classes: (1) local branches of international unions having membership in Canada and the United States; (2) Unions whose membership is wholly in Canada. In addition, the character and development of trade unions in Canada are outlined.

*Trade Union Membership.*—According to information received from officers of the different central labour organizations, and that secured from departmental records, the mem-

bership of the international craft union group, which consisted of the Canadian members of 79 organizations, one more than recorded in 1933, was 133,669 (a loss of 7,132) comprised in 1,750 local branches (a loss of 3). The One Big Union, an international industrial body, had 23,580 members, a gain of 280, and an increase of 2 in local units, having reported 48. The Industrial Workers of the World, another industrial international union reported 11 local branches, a gain of 3, with 4,155 members, an increase of 537. The Canadian central bodies numbering 24, had 662 branches, a gain of 14 for the organizations enumerated, with a combined membership of 55,486, a gain of 778. The National Catholic group consisted of 114 syndicates and 8 study circles, a gain of 12, with a combined membership of 30,346, an increase of 3,452. There were 42 independent units, same as in 1933, with 32 reporting a membership of 10,452. The Workers' Unity League reported a membership of 24,086 comprised in 105 local branches.

The above figures indicate that there were in Canada at the close of 1934, a total of 2,740 trade union branches, an increase of 33, with a combined membership of 281,774, a decrease of 4,446. Trade union membership reached its peak in Canada in 1919 with a total membership of 378,047. In 1930, the total membership was 322,449, and since that year the membership figures were as follows: 1931—310,544; 1932—283,576; 1933—286,220; 1934—281,774.

*Percentage of Trade Unionists and Organized Wage Earners to Population.*—According to

the census figures of June, 1934, trade unionists represent 2.6 per cent of the population, adding 100,390 members comprised in the 120 non-trade union associations whose names appear in the report, organized wage-earners in Canada at the close of 1933 represented 3.5 per cent of the population.

*Division by Classes.*—The accompanying table indicates the number of branches and the reported membership of the various classes of labour organizations operating in the Dominion at the close of 1934, with the number of members of each group affiliated.

Classes of Labour Organizations	Number of Main Organizations	Local Branches	Memberships
Trades and Labour Congress of Canada—			
International craft organizations.....	60	1,366	111,539
Canadian central bodies.....	3	79	3,039
Directly chartered unions.....		65	6,151
	63	1,510	120,729
All-Canadian Congress of Labour—			
(a) One Big Union.....	1	48	23,580
Canadian central bodies.....	10	300	27,574
Directly chartered unions.....		48	4,491
	11	396	55,645
National Catholic Unions.....	1	122	30,346
Independent local units.....		42	10,452
Other Canadian central bodies.....	20	275	38,317
Unaffiliated international unions			
Railway organizations.....	5	352	20,343
Industrial Workers of the World.....	1	11	4,155
(b) Other international organizations.....	14	32	1,787
	20	395	26,285
All-Canadian organizations..	34	931	120,370
All international organizations (comprising international craft organizations affiliated with the Trades and Labour Congress of Canada, One Big Union, and unaffiliated international organizations).....	81	1,809	161,404
Grand totals.....	115	2,740	281,774

(a) Has one local union in San Francisco, California, U.S.A., with 285 members.

(b) Affiliated directly with the American Federation of Labor but not with the Trades and Labour Congress of Canada.

The accompanying chart indicates the fluctuations which have occurred in the standing of organized labour in the Dominion for the past twenty-four years.

*Union Membership by Industrial and Trade Groups.*—The division of union membership among the various industries and trade groups is indicated in the accompanying table. The

membership of each central body is included in the trade group in which most of its members are employed.

Groups of Industries	Membership	Percentage
Mining and Quarrying.....	23,614	8.4
Building.....	22,038	7.8
Metal.....	12,149	4.3
Printing and Paper Making.....	14,224	5.1
Clothing, Boots and Shoes.....	22,253	7.9
Railroad employees.....	67,346	23.9
Other Transportation and Navigation	19,523	6.9
Public Employees, Personal Service and Amusement.....	26,398	9.4
All other trades and general labour.....	74,229	26.3

*Trade Union Branches by Provinces.*—The Province of Ontario had 1,054 local branch unions of all classes in Canada, Quebec being second with 497, British Columbia third with 278, and Alberta fourth with 270. The remaining five provinces ranked as follows: Saskatchewan, 194; Manitoba, 183; Nova Scotia, 137; New Brunswick, 115, and Prince Edward Island, 12.

*Trade Union Membership in Canadian Cities.*—There were 28 cities in Canada having not less than 20 trade union branches of all classes of labour organizations. These localities with 1,548 branches represent 56 per cent of the local branches of all classes operating in Canada. Their 1,213 reporting branches represent 56 per cent of all reporting branches, and they also contain 47 per cent of the entire trade union membership in the Dominion.

*Unions Having Large Memberships in Canada.*—The names of 13 organizations appear in the report which have 5,000 or more members and among them they represent a total Canadian trade union membership of 106,753 comprised in 897 local branches, being approximately 38 per cent of the total membership and about 33 per cent of the total trade union branches.

*Trade Union Benefits.*—In 1934 eleven of the 24 Canadian central organizations reported payments for benefits, the total disbursed being \$84,094, an increase of \$9,060 as compared with 1933.

Of the 81 international organizations operating in Canada 56 had expenditures for benefits, the combined disbursements in Canada and the United States being \$17,909,685, a decrease of \$5,966,459. The outlay for each class of benefit was as follows:

Death benefits.....	\$9,239,498
Unemployed and travelling benefits.....	538,752
Strike benefits.....	421,392
Sick and accident benefits.....	4,426,208
Old Age pensions and other benefits.....	3,283,835

**TWENTY-FOUR YEARS OF TRADE UNIONISM IN CANADA**

MEMBERS

In addition to the amounts expended for benefits by the central organizations, a table is included in the report showing the amounts disbursed for benefits by local branch unions to their own members. The total of these payments was \$481,075, an increase of \$30,389 as compared with the previous year, the disbursements for 1934 for each class of benefits being as follows:

Death benefits. . . . .	\$ 34,241
Unemployed benefits. . . . .	189,643
Strike benefits. . . . .	114,526
Sick and accident benefits. . . . .	102,122
Other benefits. . . . .	40,543

*Non-Trade Union Associations.*—The report also contains information concerning a group

of 120 associations embracing wage-earners, which, though not connected with the labour movement, are considered of sufficient importance to justify their names being printed in the volume. These include organizations of school teachers, government employees, commercial travellers, etc., with a combined reported membership of 100,390.

*Trade Union Directory.*—The report, like earlier issues, forms a complete labour directory, containing in its pages not only the names and addresses of the chief officers of local branch unions and delegate bodies in Canada, but also those of the central organizations with which the Canadian trade unionists are affiliated.

## INDUSTRIAL HYGIENE IN THE PROVINCE OF ONTARIO IN 1934

THE tenth annual report of the Department of Health of Ontario contains reports of the work carried on during 1934 by the following divisions: Sanitary engineering, preventable diseases, child hygiene, industrial hygiene, dental services, nurse registration, and public health education. In addition, reports are given respecting cancer control, communicable diseases, biological products and insulin.

During the year, the amount of preventable illness from communicable disease was definitely reduced as compared with past records, the reduction being most pronounced in diphtheria cases.

Another noteworthy feature of public health work in the province was the organization of the first health unit in the province, serving the counties of Stormont, Glengarry, Prescott and Russell (the amendment to the Ontario Public Health Act providing for the establishment of health units was noted in the LABOUR GAZETTE for March, 1934, page 249).

The story of the subsequent development of this initial unit is detailed in the report. Full credit is given to the assistance and co-operation of the various participating organizations—the Canadian Dental Hygiene Council, the Ontario Dental Association, the Royal College of Dental Surgeons, the Ontario Medical Association, and the Rockefeller Foundation. The “set-up” of the Unit is to include: a Director who would be a physician with special public health qualifications; a Chief Nurse, who had exceptional training and experience; eight public health nurses (two for each county); a sanitary engineer; and a clerk-statistician. These, together with the co-operation of practising physicians and dentists in the area, constitute

the structure of the unit. The department is also considering with the Victorian Order of Nurses a co-operative scheme whereby nursing services on a dentist visiting basis will be made available for residents requiring this service, particularly those unable to furnish it for themselves. This first health unit in Ontario commenced to function officially on January 10, 1935.

The report indicated that another section of the province giving concern from a public health standpoint, is the new mining area, in northern and northwestern Ontario. Consideration is being given to the provision of necessary measures for health protection in these districts. Practically all the mining companies are co-operating by having employees protected by anti-typhoid inoculations.

It was also stated that operations involving close proximity to one another of females should be further investigated with reference to the spread of tuberculosis.

*Industrial Hygiene.*—In his report, Dr. J. G. Cunningham, director of the Industrial Hygiene Division, deals comprehensively with the various phases of health supervision in industry. He emphasizes the need for closer supervision of the general health of particular groups by the experience of two rubber shoe manufacturing plants where the discovery of a number of cases of active pulmonary tuberculosis occasioned some alarm, though the plants concerned are now under medical supervision instituted by the management.

Dealing with the problem of dust, Dr. Cunningham stated that in the attempt to deal more adequately with silicosis and tuberculosis in the foundry trade, a meeting

of foundry operators of the province was called by the Department to discuss measures of dust control. As a result, some progress had been made in improving conditions, and interest in the problem had been stimulated.

The director further reported that an attempt is being made to devise a more convenient method of dust determination for field purposes and that investigation of dust concentration had been made as follows:—

(1) Recirculation of air from dusty processes to the work-room after passing through cloth screen dust arresters is considered to be an undesirable practice because of the uncertainty of maintenance of equipment, if for no other reason.

(2) The time to reduce the dust content of air in the sand-blast cabinet after blasting has ceased is short where modern equipment is installed and maintained.

(3) The silica hazard in vitreous enamel spraying of small products can be controlled with exhaust equipment.

(4) Some observations were made in foundries, porcelain, radio, asphalt and artificial abrasive plants.

The report also touched on dust control equipment, especially of masks and helmets, and indicated the principles to be incorporated in their manufacture.

Lead poisoning allegedly contracted by children from painted toys, etc., was a matter which had been investigated during the year. On this subject Dr. Cunningham observes:

"Enquiry following the recognition of cases of lead poisoning in young children at hospitals for sick children here and elsewhere, has determined that suitable substitutes for lead compounds used especially in green and yellow paints for toys and cribs are available at very small increased cost per unit of output. Whether the dose of lead required to produce poisoning from biting paint off such articles is small enough to warrant the elimination of lead as a drier or for tinting in paints is questionable. Probable greater importance should be attached to care in avoiding the use of lead paints for repainting such articles at home. There has been a sufficient number of serious cases of poisoning from such sources to claim the attention of parents, paint manufacturers and distributors and makers of children's toys and furniture."

According to the report, benzol used in rubber cement for crepe rubber shoes was responsible for the deaths of two female wage earners.

"There has been some substitution of benzol for solvent purposes," states the report, "but with the aid of labelling legislation,

knowledge of where it is used has increased considerably. Periodic examination is now required in a number of processes using it. Manufacturers and distributors of benzol-containing materials have co-operated in labelling their products to such an extent that analysis of grab samples has not shown its use without labelling."

Dr. Cunningham pointed out that the extension of medical supervision in dangerous trades under the regulations indicates that without it "cases of occupational diseases are not recognized, or at least do not usually come to the attention of the industry concerned." He further considered that "the reporting of occupational diseases by physicians as provided in section 57 of the Factory, Shops and Office Building Act is not satisfactory."

A cross section of this Division's activity in industrial hygiene is revealed in the following paragraphs:

There were 142 examinations of claimants for Workmen's Compensation for silicosis, with histories of exposure to silica dust in mining, granite cutting, moulding and sand-blasting.

Determination for lead failed to show its presence in the air breathed by women workers engaged in fine soldering operations with electric control of small lead pots. Physical examinations made earlier did not show the effect of lead absorption. However, lead is a race poison, so the inhalation of the fumes or dust by women should be avoided.

Cases of poisoning from this substance developed in two plants spraying vitreous enamel with booth equipment in use. Medical supervision has been instituted.

A new process where lead, cadmium or zinc are volatilized for application to metal surfaces, often enclosed, has come into use, but special precautions are necessary.

Trichlorethylene exposure of eight workmen in dry cleaning, using closed and semi-closed machines, failed to show evidence of poisoning. Degreasing equipment for using trichlorethylene has been remodelled by the distributors with definite improvement in the concentration of this substance in the air breathed.

The present position respecting the use of cyanide compounds for disinfestation is being reviewed.

Papers and addresses for technical and non-technical groups have been prepared to supplement requests for literature and other assistance in matters affecting the health of industrial workers.

## WORKMEN'S COMPENSATION IN QUEBEC IN 1934

THE seventh annual report of the Workmen's Compensation Commission of Quebec reviews the administrative duties during the calendar year 1934. While the report is the seventh to be issued, it is the fourth dealing with operations under the Act of 1931 (LABOUR GAZETTE, May, 1931, page 525).

The number of accidents reported to the Board during the year was 35,436 as compared with 30,462 in 1933. Final figures for 1933 indicated a total of 26,723 claims allowed for accidents of which number 122 were for fatalities, 12,334 for compensation and 14,267 for medical aid only.

The number of firms reporting to the Commission as at December 31, 1934, was 9,498 as compared with 8,239 at the end of the year 1933. This increase, the report states, was brought about by investigations made during the year 1934 in co-operation with the Quebec Association for the Prevention of Industrial Accidents. The Commission considers that very few employers are doing business without reporting to the Commission.

The total benefits awarded by the Commission in 1934 amounted to \$2,409,020.90; of which \$484,564.99 was for medical aid only. Administration expenses for the year totalled \$237,260.09, representing 9.08 per cent of all benefits awarded. In 1933 the amount awarded for benefits was \$2,473,213.77, which, compared with the amount for 1934 (referred to above) indicates a reduction during the past year of approximately \$64,192.87.

*Method of Rating.*—The Commission explains its methods of rating for compensation purposes as follows:—

"Separate accounts are kept by the Commission of assessments received and for compensation and medical aid awarded for each class of employers. Each of the 24 classes of industry does form a mutual insurance association of the employers in a given class.

"The rates and the assessments fixed for each class are changed according to the needs and they are determined so as to pay for the charges of the current year. At the beginning of the year every employer is requested to furnish the Commission with an estimate of his probable payroll of the current year and his assessment is based upon that estimate. At the end of the year, the actual amount of payroll is audited and the assessment is adjusted accordingly and the provisional assessment is also to be modified if necessary.

"It is seen that the amount of the assessment is fixed according to the number and the importance of the accidents and the amount of salaries to be assessed. It must be sufficient to meet the expenses incurred to pay for compensation, medical aid and for estimates of the amount still remaining to be paid for accidents which have not been finally disposed of before the end of the year and for which no claim has been made or others. The differences between the estimates of payroll given at the beginning of the year and the actual wages paid is also to be taken into account. In this way, the total expenditures and the total income for each class of the year are estimated as accurately as possible and it is then possible to realize if the rate charged is insufficient or too high.

"The rate is kept in force as long as it seems fair or when the surplus or the deficit is small but it is revised if necessary. At the end of the year, if a surplus be noted, it is credited to the interested class and taken into account when determining the assessment to be charged."

The assessments in the 24 classes of Schedule 1 for the year 1934 amount to \$2,565,793.87. An additional sum of \$253,308.66 with interests, penalties and other payments is to be added making a total provisional revenue of \$2,819,102.53 for the year.

As in the past, the Commission allowed the Schedule 2 employers to make their own payments to injured workmen or their dependents and these employers report to the Commission the amounts paid in each case. Where there is permanent incapacity, or death and when a rent is payable, the Commission issues an order against the employer concerned stating the amount he will have to pay under the Act, copy of this order is forwarded to the injured person or his dependents showing the amount of benefits to be received. In 1934 Schedule 2 employers paid in compensations the sum of \$386,326.12 as compared with \$405,830.58 in 1933.

*Safety and First Aid.*—During the year 1934, the Commission allowed \$9,733.20 to the Quebec Pulp and Paper Safety Association; \$4,666.64 to the Quebec Lumbermen's Accident Prevention Association; \$1,000 to the Quebec Public Utilities Safety Association; and \$50,000 to the Quebec Association for the Prevention of Industrial Accidents. The Commission co-operates closely with these associations to decrease the number of industrial accidents.

**Finances.**—The financial statement indicates that the total expenses for 1934, actual and estimated, amounted to \$2,778,456.30 and the total revenue, actual and estimated amounted to \$2,819,102.53, leaving an apparent surplus of \$40,646.23 on the year's operations.

The report concludes with tabular statistics for the year 1933, furnishing completed information for that year with respect to accidents, etc.

## BRITISH COLUMBIA BOARD OF INDUSTRIAL RELATIONS

### Recent Orders Governing Minimum Wages and Hours of Work

**T**HE British Columbia Board of Industrial Relations administering the Minimum Wages and Hours of Work Acts, has recently issued an order establishing the minimum rates for janitresses and the public housekeeping occupation.

#### Female Minimum Wage Act

**ORDER No. 29.**—*Establishing a minimum wage in the occupation of Janitress.*

As defined in the order, janitress "means and includes every employee employed as janitress, janitress-cleaner, or janitress-fire-man."

The minimum wage for every janitress is fixed at 35 cents per hour, except for janitresses employed in the larger apartments. The rates for these are as follows: for apartment buildings containing over 50 apartment suites, where the janitress resides on the premises, the wages are established at \$125 per month; for apartment buildings containing not more than 50 and not less than 25 residential suites, the wages are to be \$100 per month; for apartment buildings of not more than 24 nor less than 13 residential suites, the wages are to be \$75 per month; while for less than 13 residential suites the wages are to be 35 cents for each hour of work. When a janitress works in two or more apartment buildings the minimum wage shall be calculated according to the combined number of residential suites in the buildings.

"When a janitress resides in any apartment building to which this Order applies, there may be deducted from her wages a sum equivalent to a fair rental value for such provided accommodation in proportion to the rental value of the other suites in the said apartment building:

"Provided, however, that not more than twenty dollars (\$20) a month may be deducted from her wages for a suite of two (2) rooms and bath-room, and not more than five dollars (\$5) per month may be deducted from her wages for each room in excess of two (2) in the said suite.

"In cases where the janitress is furnished with electricity and (or) gas, and the janitress

uses the same, not more than the sum of four dollars (\$4) per month may be deducted from her wages for the said electricity and (or) gas, or, in the alternative, meters shall be installed and the janitress shall thereupon pay for the consumption of the said electricity and (or) gas according to the said meters."

This order became effective on October 3, 1935.

**ORDER No. 30.**—*Establishing a minimum wage in the Public Housekeeping Occupation.*

As defined in the Order, public housekeeping occupation "includes the work of waitresses, attendants, housekeepers, cooks, and kitchen-help in restaurants, hotels, tea-rooms, ice-cream parlours, light-lunch stands and other places where food is cooked, prepared and served for which a charge is made; and the work of chambermaids in hotels, lodging-houses, and apartments where lodging is furnished, whether or not such establishments are operated independently or in connection with any other business; and the work of all female elevator operators."

Subject to certain exemptions, the Board has fixed the minimum rate for experienced employees over eighteen years of age in the public housekeeping occupation at \$14 per week of 40 hours or more. For such employees working less than 40 hours per week, the minimum is 37½ cents per hour, provided that the wages in any one day shall not be less than \$1.50.

The Board has fixed the minimum rate for employees under eighteen years, and for inexperienced workers over eighteen years, at \$12 per week of 40 hours or more. For such employees working less than 40 hours per week, the minimum is 30 cents per hour, provided that the wages in any one day shall not be less than \$1.20.

When lodging is furnished not more than \$3 a week may be deducted; and when board or meals (21 in a week) are furnished, not more than \$5.25 per week may be deducted. (A fraction of a week's board is to be computed upon a proportional basis).

Licences must be obtained from the Board before inexperienced workers may be employed.

No employee in the public housekeeping occupation is permitted to work more than 48 hours per week, except in cases of emergency when 52 hours a week may be worked. Employees working more than 48 hours a week are to be paid at a rate not less than time and a half for such excess time.

This order became effective on October 3, 1935.

### Hours of Work Act

The Board of Industrial Relations has also issued regulation (No. 16A) in substitution of regulation No. 16 (LABOUR GAZETTE, October, 1934, page 914) governing the working hours in drug stores; and regulation No. 15B in substitution of regulation No. 15A (LABOUR GAZETTE, September, 1934, page 831) as follows:

#### REGULATION No. 16A—*Drug Stores*—

"Persons employed in drug-stores as registered apprentices, certified clerks, or licentiates of pharmacy may work four (4) hours per week in excess of the weekly limit prescribed by section 3 of the Act, but in no case shall the daily hours worked by any registered apprentice, certified clerk, or licentiate of pharmacy in any drug store exceed nine (9) in any one day."

This regulation remains in effect from October 3, 1935, to March 31, 1936.

#### REGULATION No. 15B—*Mercantile Industry*—

"Persons employed in the mercantile industry, which includes all establishments operated for the purpose of wholesale and (or) retail trade, in the Province of British Columbia, with the exception of the City of Vancouver, the City of North Vancouver, Municipality of the District of West Vancouver, the Municipality of the District of Burnaby, the City of Victoria, the Municipality of the township of Esquimalt, the Municipality of the District of Oak Bay, and the Municipality of the District of Saanich, may work three (3) hours per day in excess of the limit prescribed by section 3 of the said Act, on Saturday of each week and on the day preceding a statutory holiday, when such statutory holiday occurs on a Saturday, but the total hours worked in any one week shall not exceed forty-eight (48)."

This regulation remains in effect from October 3, 1935 to October 3, 1936.

### Male Minimum Wage Act

#### ORDER No. 30.—*Establishing a minimum wage in the occupation of bus driver*

As defined in the order, "bus driver" means and includes every employee and every male

person under twenty-one (21) years of age in charge of or driving a motor-vehicle with seating accommodation for more than seven (7) passengers used for the conveyance of the public, for which service a charge is made.

The Board has fixed the minimum rate for bus drivers under twenty-one years of age at 45 cents per hour for a week of not less than 40 and not more than 50 hours. For such employees working less than 40 hours, the minimum is 50 cents per hour. For every hour in excess of 9 hours per day or in excess of 50 hours per week, the minimum is 67½ cents per hour. These regulations are applicable in Victoria, Saanich, Oak Bay and Esquimalt.

This order became effective on October 28, 1935.

### Additional Orders

The Board of Industrial Relations has also issued under the Male Minimum Wage Act and the Female Minimum Wage Act, Orders No. 10A and 24A respectively, excluding persons employed in the sale of Christmas cards from the provisions of Order No. 10 (LABOUR GAZETTE, August, 1934, page 752) and Order No. 24 (LABOUR GAZETTE, July, 1935, page 634).

The Alberta Gazette of October 31 announced the transference of relief administration from the Department of Municipal Affairs to the Department of Public Health. Administration of the Mothers' Allowance Act has also been transferred from the Department of the Attorney General to the Department of Public Health.

There were 5,596 accidents reported to The Workmen's Compensation Board during the month of October, this being the largest number reported during any month this year, and compares with 5,092 during September, and 5,226 during October last year. The fatal cases numbered 28, as against 20 in September, and 33 last October.

The total benefits awarded amounted to \$517,878.61, of which \$434,917.01 was for compensation and \$82,961.60 for medical aid. This brings the total benefits awarded to date this year to \$4,461,922.85, as compared with \$3,668,826.62 during the same period last year, and the number of accidents reported this year to date are 48,552, as against 45,553 for the corresponding period of 1934.

## MANITOBA MINIMUM WAGE BOARD

### Order Governing Employment in Hotels, Restaurants, Clubs, Etc.

The Minimum Wage Board of Manitoba has recently issued Order No. 5 governing employment in hotels, restaurants, clubs, victualling houses and refreshment stands in all sections of the province.

The order is as follows:—

Every employer shall be guilty of an offence and liable to the penalties prescribed by "The Minimum Wage Act," who employs any person contrary to the provisions hereof.

#### The Minimum Wage:

(A) Every employer in:—the area comprised within the Greater Winnipeg Water District; and the City of Brandon at any time; and the City of Portage la Prairie during the months of May, June, July, August, September and October; and in any summer resort during the months of June, July, August and September—shall pay wages to each employee at not less than the following rates:

(1) For experienced female employees at \$12 per week or twenty-five cents per hour.

(2) For inexperienced female workers, \$9.60 for the first three month period of employment in the occupation or twenty cents per hour during such period and \$12 per week, or 25 cents per hour, thereafter.

(3) For male employees eighteen years of age or over at \$12 per week or twenty-five cents per hour.

(4) For male employees under eighteen years of age \$8 per week during the first six month period of employment in the occupation; and \$9 per week during the second six month period; and \$10 per week until any such employee becomes of the age of eighteen years.

(5) For male employees employed as bell boys, regardless of age, at \$8 per week.

(B) During the period commencing the 1st day of November in any one year and terminating on the 30th day of April in the year next following, every employer in the City of Portage la Prairie shall pay wages to each employee at not less than the following minimum rates:

(1) For female employees at \$9.60 per week or twenty cents per hour.

(2) For male employees at the age of eighteen years or over at \$10 per week or twenty-one cents per hour.

(C) Except as hereinafter provided every employer in any other part of Manitoba shall pay wages to each employee at not less than the following minimum rates:

(1) For female employees at \$9.60 per week or twenty cents per hour.

(2) For male employees of the age of eighteen years or over at \$10 per week or twenty-one cents per hour.

Provided, however that, during the period commencing the 1st day of November, in any one year, and terminating on the 30th day of April in the year next following, in places having a population of less than one thousand, every employer therein may pay wages to each employee at a minimum rate ten per cent below the rates set forth in this subsection (c) hereof.

#### Hours:

(1) Hours of Labour—The hours of labour for each employee shall be not more than ten (10) in any day, nor more than forty-eight (48) in any week, with one full day off each week, or in lieu thereof, two half days off each week, consisting of not less than five consecutive hours each, of the regular working day. One-half hour interval exclusive of regular working hours shall be allowed for each meal. The hours shall be arranged so that no work period for female employees shall end between 1 a.m. and 6 a.m.

(2) Exception—The above subsection (1) hereof shall not apply to female employees, male or female cooks and male employees of the age of eighteen years or over employed in hotels. Time worked by these employees in excess of forty-eight (48) hours shall be paid for at not less than the hourly rate specified. In hotels of 100 rooms or more the total hours worked by any such employee shall not in any case exceed 54 in any week.

#### Time Record:

Every employer shall keep an accurate record of all hours worked by and wages paid to each employee showing the overtime record separately in a manner convenient for examination by inspectors and shall keep same available for inspection at any time.

#### Minors:

No person under sixteen years of age shall be employed.

#### Method of Payment:

Every employer shall pay wages in full once a week in cash and within three (3) days after they have been earned.

#### Notice to be Given:

After four weeks' employment, three (3) days' notice shall be required on the part of the employer before dismissing an employee, and on the part of the employee before leaving employment, except in the case of flagrant insubordination on the part of the employee or flagrantly unjust treatment on the part of the employer.

#### Board and Room—Uniforms—Laundry:

Where meals are actually furnished by the employer there may be deducted from the wage a charge not greater than at the rate of four dollars (\$4) for a full week of 21 meals. If lodging is furnished by the employer a deduction from the wage of not more than two dollars and fifty cents (\$2.50) per week for room may be made.

If any specified kind of dress, cap, cuffs, apron or uniform is required, it shall be furnished and laundered by the employer without cost to the employee.

Under "Conditions of Labour" the Order states further the provisions with respect to cleanliness, toilet rooms, temperature and ventilation and safety devices.

This Order becomes effective November 1, 1935.

## AMERICAN FEDERATION OF LABOR

### Summary of Proceedings of the 54th Convention

THE fifty-fourth annual convention of the American Federation of Labor was held at Atlantic City, commencing on October 7, 1935. After the preliminary ceremonies of welcome, President William Green assumed the chairmanship of the convention. In his address, he reviewed the progress of the past year particularly in the restoration of wage reductions and in the securing of legislation, both in the Federal Congress and State Legislatures "unequaled in any year's history of the American Federation of Labor." Reaffirming labour's stand upon reduction of working hours, he declared: "I feel justified in announcing to the world on this auspicious occasion that labour will never stop until it secures the six-hour day and the five-day week."

Referring to legislative achievements of the Federation since the San Francisco convention in 1934, he instanced the following: Labour Disputes Act; Social Security Act; Stabilization of the coal industry; Air Mail Act; a forty-hour week for 121,069 postal employees with no reduction in wages; Railroad Retirement Act; an appropriation of \$4,880,000,000 for relief and unemployment; Repeal of the last five per cent reduction imposed upon Government employees through the enactment of the original Economy Act; a Prison Labour Law.

A radiogram message expressing regret at his inability to be present at the convention was received from the United States President, Franklin D. Roosevelt.

The report of the Credential Committee showed there were 510 accredited delegates present, representing 93 international and national unions, 3 departments, 33 state branches, 87 central bodies, 22 local trade and federal labour unions, and 4 fraternal delegates.

*Executive Council Report.*—Under the heading "National Recovery Administration," the report of the executive council showed that there were 550 approved codes which controlled 90 per cent of all industry and trade, and it was claimed that as a result of these codes, unfair trade practices were checked and a fair basis of competition developed through minimum wage and hour standards, elimination of child labour, regulation of home work, and the formulation of trade practices. The primary object of the N.R.A., according to the report, was an effort to develop self-government in industry under government supervision. It was considered

that the decision of the United States Supreme Court in the Schechter case reopened the problem of industrial regulation. Reference was made to the enactment of the National Labor Relations Act under which a new National Labour Relations Board was created to prevent unfair labour practices, and to hold elections for the purpose of determining the union which the majority of the employees wish to have as the collective bargaining agency.

Discussing apprenticeship training the report touched on the formation of a Federal Committee on Apprenticeship Training to prevent abuses in apprenticeship under the codes, and to reaffirm standards for vocational education.

Progress was reported in the establishment of the shorter work week, with "well over two million members working 40 hours or less per week," though it was considered that re-employment had not kept pace with increases in business activity. The executive also stated that the placement function of the United States Employment Service should be developed and that labour should have a part in the policies of this agency.

Other subjects dealt with in the executive report were: relief; national youth administration; social security; medical care and its costs; organization of mass production industries; trade union benefits; non-partisan political policy; education; international labour organization; Communist opposition to the American labour movement; German boycott.

In a supplementary report the activities of the Railway Employees Department (A. F. of L.), were presented. It contained a synopsis of the wage negotiations, and dealt with such matters as employment; Emergency Railroad Transportation Act; bus and coach legislation; Railroad Retirement Act; six-hour day bill; government ownership on railroads; litigation involving Railway Labour Act, etc.

*Address of Secretary of Labour.*—Addressing the convention, Miss Frances Perkins, Secretary of the United States Department of Labour, emphasized the importance of co-operation between government and organized labour. She considered that the acceptance of the principle of equality of bargaining power is one of the vital things in the development of democracy to-day. Reference was made to improved conditions in the

United States as indicated by "the highly significant fact that the durable goods industries are forging to the front."

The objective of the Wagner Labor Disputes Act, creating the National Labor Relations Board was stated to be the effecting of a better relation between labour and management, and the Labor Secretary was confident it would accomplish its purpose. She was of the opinion, also, that further labor legislation might be enacted by the various State Legislatures, and was certain that some method would be devised to bring about greater co-operation between the States and the Federal Government.

*Report of Auditing Committee.*—According to the statements presented, the total revenue as at August 31, 1935, including the balance brought forward, amounted to \$1,598,181.67; expenses totalled \$975,227.14, leaving a balance on hand of \$622,954.53. The committee also reported balances in the Gompers' Memorial Fund and the American Federation of Labour building fund of \$15,835.25 and \$57,417.86, respectively.

*Addresses of Fraternal Delegates.*—Representing the British Trades Union Congress, addresses were delivered by Andrew Conley, general secretary of the National Union of Tailors, and Andrew Naesmith, secretary of the Amalgamated Weavers' Association. Capt. J. A. P. Haydon, M.C., represented the Trades and Labour Congress of Canada, and in the course of his address referred to the legislation enacted during the last session of the Canadian Federal Parliament. Reference was made also to the establishing of the commission on employment and social insurance, the workers' representative being Mr. Tom Moore, past president of the Trades and Labour Congress of Canada.

*Committee on Organization.*—In this report mention was made of the organization campaign to commence on December 1, 1935, in which all affiliated bodies were urged to co-operate. Complete details respecting organizational activities were presented.

The progress made in organization work in mass production industries in compliance with the order of the 1934 convention was reported on by the committee. A resolution calling for an organization drive in the automobile industry and another for the organizing of workers on relief projects were concurred in by the committee and adopted by the convention.

*Committee on Shorter Work Day.*—In presenting its report this committee referred to previous declarations of the A. F. of L.

in urging the adoption of a reduced working day.

Reviewing the trend of the past year, the committee reported a tendency—with returning industrial activity—toward an increase in the working week, the increase averaging approximately one-half hour longer per week than in 1934.

The committee approved of the 30-hour work week legislation introduced in Congress and asked that the executive council be directed to spare no effort to have legislation enacted. In this respect the convention, on recommendation of the committee, unanimously adopted a resolution "strongly reaffirming its endorsement of the 5-day, 6-hour work week," and its universal adoption without delay. The resolution further recommended that "this objective of the six-hour day and the 5-day work week be declared by this convention to be its paramount objective."

*Settlement of Building Trades Controversy.* The committee on executive council's report made the announcement that a basis of settlement had been reached in connection with the Building Trades Department controversy which had been carried on for over a year. It submitted a memorandum of the settlement detailing the provisions, methods of adjudication, etc.

*Committee on Labels.*—A resolution urging the use of American-made goods was adopted on recommendation of the Committee on Labels. The attention of the delegates was drawn to the value of the blue eagle label under the National Recovery Act, but the committee cautioned against permitting the union label being replaced by a purely government mark.

*Committee on Legislation.*—In its report the Committee on Legislation declared that the organized labour movement had every reason for rejoicing over the important legislation secured, and also the progress made with respect to legislative problems yet pending. The executive was also commended for its intention to urge legislation in the next session of Congress with the object of having fair wage clauses in government contracts. Other features referred to were: Forty-hour week for postal employees; progress in the elimination of competition of prison made goods with those produced by free labour; minimum wage laws for women and minors in States which have not already adopted such protective legislation.

Among the recommendations contained in the resolutions submitted to this committee were:

Opposition to the employment of non-civil service employees in the postal service except during the month of December.

Opposition to labour injunctions.

Abolition of private employment agencies.

Enactment of a widows' annuity law.

Appeal courts for the civil service.

A Federal anti-lynching law.

Preventing the abusive use of state militia in industrial disputes.

Overtime for work in excess of 40 hours per week.

Compensation legislation to cover occupational diseases.

Enactment of seamen's bill.

Fair working conditions on government contracts.

Objection to alleged unfair educational qualifications adopted by certain governmental agencies.

*Committee on Education.*—This committee drew attention to the serious handicap to the public school system of the United States due to a drastic retrenchment in public funds during the depression. It was contended that as funds at the disposal of the various States were inadequate to maintain the public schools, the federal government should, during such an emergency, render aid to these States. In this respect the declarations of previous conventions concerning this emergency aid were set forth.

Objection was taken to the prevention of vocational teachers joining labour organizations for the reason that their salaries were paid from federal funds. Promotion of nursery schools was commended.

*Committee on International Labour Relations.*—The committee on International Labour Relations dealt with the executive's review of the history of the International Labour Organization and the attitude of the A. F. of L. towards that body. Though supporting the I.L.O. since its inception, it was pointed out that it was only during the year that United States labour participated as a credentialled unit. Endorsation was given to the proposal of the executive council that labour representatives for the International Labour Conference be selected not less than six months in advance of the meeting in order that adequate preparation for their work could be made. The committee proposed that William Green, president of the A. F. of L. be selected to attend the 20th annual Labour Conference in Geneva next June. It was further recommended that future delegations to this conference be provided with an adequate number of technical advisers.

According to the committee's report a new situation confronts the trade union movement throughout the world and three reasons were presented for greater unity in the interna-

tional labour movement, viz.—The growth of dictatorships; the threat of war; and "the membership of the United States Government and labour in the International Labour Organization."

Considering that the basis of reaffiliation of the A. F. of L. with the International Federation of Trade Unions should be re-examined, it was recommended "that the president of the A. F. of L. be empowered to initiate discussions with the officers of the International Federation of Trade Unions to see if such a basis of accommodation cannot be found," and it was further recommended "that the executive council be given power to act upon such reaffiliation if the discussions initiated by President Green prove to disclose a basis of effective co-operation."

*Committee on Law.*—To this committee was submitted that section of the executive council's report dealing with communist activities. Data was submitted from which could be determined the past and present attitude and intentions of the Communist Party toward the trade union movement. The delegates were informed that there had been a change in Communist policy and that it was now in favour of a united workers front. In order to combat communist activities among the various organizations affiliated with the Federation the committee recommended the following additional paragraph to Section 5 of Article IV of the constitution:

"No organization officered or controlled by Communists, or any person espousing Communism or advocating the violent overthrow of our institutions shall be allowed representation or recognition in any Central Body or State Federation of Labour."

This recommendation was adopted.

*Committee on Resolutions.*—Dealing with the executive's analysis of the social security legislation, the committee on resolutions declared it to be a valuable record of most important legislation. The executive were instructed to carefully study the workers' interests, and introduce such amending legislation as may be necessary so that the law may serve the purpose for which it was enacted and provide adequate labour representation in its administration. The committee also touched on the following matters in the executive's report: re-employment; reported shortage of skilled labour; apprenticeship training; National Labour Relations Board; National Recovery Administration; National Labor Relations Act; national youth administration; State compacts; United States Employment Service.

In connection with eight resolutions dealing with the war in Ethiopia, the committee made the following recommendation, which was adopted:

"That this convention expresses its concurrence with the action of the League of Nations declaring Italy an outlaw nation which all civilized countries should refuse to assist commercially, financially or in any other manner.

"Your committee further recommends that this convention emphatically approve of the policy, relative to Italy's attack on Ethiopia, which has been announced by President Franklin Roosevelt, and by Congress."

Among the recommendations contained in the adopted resolutions were:

That all designs and plans for naval construction be prepared directly by employees of the Federal Government.

Continuance of Federal aid to American merchant marine and shipping, and the employment on Federal assisted ships of only American-born seamen or naturalized citizens.

Adoption of National Child Labour Law. Legislation to establish and enforce codes protecting labour conditions.

Federal legislation for continuance of the principles of the N.R.A.

Condemning of tactics and methods of National Liberty League.

Organizing of tenant farmers and a Federal investigation into their working conditions.

Initiation of a campaign to eradicate racketeering, corruption and gangsterism in the labour movement.

The immediate, safe, and unconditional release of Angelo Herndon, negro labour leader of Georgia.

Enactment of socially constructive health insurance legislation through Congress and the individual States.

Protection against cheap substitutes for dairy products.

Restricting the importation of newsprint paper.

Reaffirmation of the declarations made by previous conventions of the A. F. of L. against German Fascism, and in addition recommending:

1. "That the boycott declared by the Convention of the A. F. of L. at Washington and reaffirmed at San Francisco against all German goods and services be continued and with greater vigor and efficiency.

2. "That all American sport organizations be prevailed upon not to participate in the 1936 Olympic Games in Berlin. Such participation would be used only to confer prestige upon Nazi regime.

3. "Giving all possible moral and financial support to the Labour Chest for the relief and liberation of workers of Europe so that it might efficiently and adequately meet the needs of Labour's Fascist victims."

Congressional investigation of labour spy activities.

Enactment of legislation to end the activities of strik-breaking agencies.

Opposition to reduction in the proportion of naval work done in United States Navy Yards and arsenals.

Investigation of charges that the American Federation of Teachers "is now controlled by those openly hostile to the principles of the A. F. of L.," and necessary action taken.

Inauguration of a slum clearance and low rent housing program.

Protesting the use of foreign cement by the United States Government.

Government control of radio broadcasting.

Establishment of adjustment boards in the navy and war departments to deal with labour grievances.

Appointment of a committee to advise the Federal Commissioner of Education on all questions connected with plant apprentice training.

Opposition to means test in relief activities.

Protesting employment of relief workers by agricultural interests.

Union conditions for white collar workers under the Works' Progress Administration.

Opposition to company unions.

Prevailing union scale on relief projects.

On the question of setting up industrial unions to replace existing national and international unions, thirteen resolutions were submitted. The majority report of the resolution committee non-concurred in such action, while a minority report was presented in support of the object of the resolutions. After a discussion which occupied the time of two sessions, the majority report of the committee was adopted on a roll call vote—18,024 in favour to 10,933 against.

Thirteen resolutions were submitted to the committee on resolutions calling for the organization of a Labour Party. To the committee was also referred that part of the executive council's report relative to non-partisan political policy.

The convention voted non-concurrence in these resolutions while the declarations of previous conventions for non-partisan political action were reaffirmed.

### Election of Officers

The officers elected were: President, William Green, Washington, D.C.; first vice-president, Frank Duffy, Indianapolis; second vice-president, Thomas A. Richert, New York; third vice-president, Matthew Woll, Washington; fourth vice-president, John Coefield, Washington; fifth vice-president, A. O. Wharton, Washington; sixth vice-president, Joseph N. Weber, New York; seventh vice-president, G. M. Bugniazet, Washington; eighth vice-president, George M. Harrison, Cincinnati; ninth vice-president, Daniel J. Tobin, Indianapolis; tenth vice-president, W. L. Hutcheson, Indianapolis; eleventh vice-president, John L. Lewis, Washington; twelfth vice-president, David Dubinsky, New York; thirteenth vice-president, Harry C. Bates, Washington; fourteenth vice-president, Edward J. Gainor, Washington; fifteenth vice-president, William D. Mahon, Detroit; secretary-treasurer, Frank Morrison, Washington.

Fraternal delegates to the British Trades Union Congress, William J. McSorley, president of the Wood, Wire and Metal Lathers' International Union, Cleveland, and Charles W. Frey, International Association of Machinists.

Fraternal delegate to the Trades and Labour Congress of Canada, Joseph Gillooly, president, American Flint Glass Workers' Union, Toledo.

Tampa, Florida, was selected as convention city for 1936.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### The World Unemployment Situation

Tabular statistics showing the extent of employment and unemployment in various countries during the summer of 1935, with the corresponding figures for 1934, were published recently by the International Labour Office (Geneva).

In the majority of countries registered unemployment has again declined as compared with the corresponding date in the previous year. Generally speaking, the decrease is somewhat larger than was recorded three months ago, except in Denmark and Roumania where it was smaller and Australia and Chile where it was about the same. On the other hand, registered unemployment shows an increase in Bulgaria, France, Hungary, Latvia, the Netherlands, Poland, Spain, Switzerland, and Yugoslavia. The same phenomenon was observed in those countries with the exception of Latvia, three months ago. In the Irish Free State, however, which showed an increase three months ago, there is now a decrease. In certain countries there are discrepancies in the figures which make it impossible to draw any conclusions. Thus, in Austria the unemployment figures show a decrease but the employment figures also show a fall, in Norway one set of unemployment figures shows an increase and the other a decrease. In the United States the unemployment figures show an appreciable decline while employment seems to have increased very little.

For Canada, the analysis of the International Labour Office is based on returns from trade unions in August, 1934, and August, 1935. On this basis the percentage of unemployed trade unionists showed that the gain in employment from August, 1934 to August, 1935 was 2.8. (More recent statistics dealing with trade union unemployment in Canada are given in this issue of the *LABOUR GAZETTE* under the section "Employment and Unemployment in Canada").

In most countries recorded employment has increased as compared with the figures for the previous year, but it has decreased in France, the Netherlands and Switzerland. In Bulgaria, Hungary, Latvia, Poland and Yugo-

slavia both employment and unemployment appear to have increased, but these are not necessarily inconsistent trends if account is taken of changes in the size of the working population.

It should be pointed out that the figures provide a basis for comparing tendencies, but not for any statistical comparison of the extent of employment or unemployment in the different countries.

The figures are arrived at by methods which differ from one country to another, and those given for certain countries are so far from indicating the real situation that they cannot be regarded as anything more than symptomatic.

### 73rd Meeting of the Governing Body

At the 73rd meeting of the Governing Body of the International Labour Office held at Geneva from October 24 to 26, the following questions were provisionally placed on the agenda of the 1937 Conference: reduction of hours of work in the printing and book-binding trade, and the chemical industry; public works; rights of performers in connection with the system of producing sounds and images; apprenticeship and technical education; regulations for contract employment; and labour statistics. The 74th meeting will be held on February 20, 1936.

### Agenda of Twentieth Conference

The following questions have been placed on the agenda of the Twentieth Session of the International Labour Conference opening in Geneva, Switzerland, on June 4, 1936; (1) the regulation of certain special systems of recruiting workers; (2) holidays with pay; (3) reduction of hours of work on public works undertaken or subsidized by Governments; (4) reduction of hours of work in the building and civil engineering industry; (5) reduction of hours of work in iron and steel works; (6) reduction of hours of work in coal mines; and (7) reduction of hours of work in the textile industry.

### All-America Regional Meeting of the International Labour Conference

The regional meeting of the member states of the International Labour Organization for North, Central and South America, which was to have been held in Santiago, Chile, commencing December 30, 1935, (LABOUR GAZETTE, August, 1935, page 715), has been postponed, and will take place instead from January 2 to 15, 1936. All the American states, including Costa Rica, which is the only non-member of the International Labour Organization, have been invited to participate. Representatives will also be in attendance from the International Labour Office and from the Governing Body in Geneva.

### Meeting on Accident Prevention

On invitation of the National Accident Insurance Institute of Switzerland, the Correspondence Committee on Accident Prevention of the International Labour Organization, met in Lucerne from October 10 to 12, among those in attendance being Mr. R. B. Morley, Manager of the Industrial Accidents Prevention Associations of Ontario, who is the Canadian representative on this body.

The Committee's main task was to consider draft safety regulations for the building

trades which had been prepared by a sub-committee, also draft monographs on abrasive wheels and on safety in the use of ladders. Draft regulations for the building trades will be included in a report which is to be submitted to the International Labour Conference in 1936. The monograph on abrasive wheels was approved and will be published shortly by the International Labour Office. The monograph on safety in the use of ladders was not finally dealt with. Mr. Morley, the Canadian representative, was appointed a member of a committee to prepare a monograph on the safe handling of corrosive liquids. Committees were also appointed to prepare monographs on protective screens and on the protection of the hands and feet of foundry workers.

In connection with this meeting the Swiss National Accident Insurance Institute arranged for demonstrations to be given of the Institute's guards for spindle moulding machines and circular saws, and the use of its welding masks and protective goggles. The members also had an opportunity of seeing five films produced by the Belgian Manufacturers' Association showing the course of typical accidents, and a film produced by the Swiss Institute showing the dangers of spindle moulding and how they are overcome by its guards.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JULY TO SEPTEMBER, 1935

**E**MPLOYMENT conditions, as indicated by the business transacted by the offices of the Employment Service of Canada during the quarter, July to September, 1935, showed a gain over that of the corresponding quarter last year, as there was an increase of over 11 per cent in vacancies listed and of nearly 10 per cent in placements effected. This gain was largely accounted for in farming, where placements were substantially higher. Increases in services, manufacturing and transportation were, however, more than offset by the decline in the construction and maintenance group alone, a marked decrease being recorded as well in logging, and other losses of lesser volume in mining and trade, that in the last named group being nominal only. Provincially, all, except Nova Scotia and British Columbia, reported more vacancies and placements than in the corresponding quarter of 1934, the highest gains being recorded in Saskatchewan and Ontario, these due largely to gains in the farming industry. The greatest decline was in British Columbia, where placements in construction and maintenance were noticeably fewer.

From the chart on page 1035, which accompanies the article on the work of the Employment Offices for the month of September it will be noticed that the curves of vacancies and placements in relation to applications rose gradually during July, dropped to a slightly lower level during the first part of August, again followed an upward trend during the latter half of that month, and declined during the first half of September, where they remained practically unchanged for the remainder of the month, the level of both curves at the end of the quarter under review being about 10 points higher than those shown at the close of the corresponding period last year. During the period July to September, 1935, there was an average of 64.4 vacancies and 60.2 placements for each 100 applications for employment, as compared with 58.1 vacancies and 55.1 placements for each 100 applications during the corresponding quarter last year.

The average number of positions offered daily during the present quarter was 1,478, of applications registered 2,294 and of placements effected 1,382, in contrast with a daily

average of 1,346 vacancies, 2,316 applications and 1,275 placements in regular and casual employment during the corresponding quarter of 1934.

During the three months July to September, 1935, the offices reported that they had made 111,961 references to persons to positions and effected a total of 106,384 placements, of which 70,799 were in regular

employment and 35,585 in casual work. Of the placements in regular employment, 56,529 were of men and 14,270 of women, while casual work was found for 26,450 men and 9,135 women. Records for the corresponding quarter of 1934 showed 96,865 placements, of which 58,332 were in regular employment and 38,533 in casual work. Applications for employment during the period under review

were received from 136,197 men and 40,440 women, a total of 176,637, in contrast with a registration of 176,015 persons during the same period in 1934. Employers notified the Service during the quarter July to September, 1935, of 113,742 vacancies, of which 84,309 were for men and 29,433 for women, as com-

pared with 102,275 opportunities for work during the corresponding period a year ago.

In another section of this issue will be found a report in detail of the transactions of the Employment Offices for the month of September, 1935.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF OCTOBER, 1935

### Reports of Superintendents of the Employment Service

**T**HE employment situation at the end of October was reported by the superintendents of the Employment Service to be as follows:—

Farming activities in the Maritime Provinces were about completed for the season and preparations were being made for the coming winter. Logging was quiet, but export of hard and soft lumber to Britain continued in fairly large quantities. Fishing showed some improvement over recent weeks, although somewhat handicapped by heavy weather. Coal mines in the New Glasgow area operated from one to five days per week, while the majority of those in Cape Breton and vicinity worked four days. Additional idleness, however, was reported by two mines in the latter district. Iron and steel industries were busy and reports from other manufacturing sources stated that, although there was no pressure of business, all factories were running up to the average for the season. Construction of private dwellings was fairly heavy and numerous permits were issued for the erection of new buildings and for repair jobs. Work on highways was also in progress. Transportation and trade were both good, and there was a fair demand for domestics, housekeepers and charworkers in the Women's Division.

A decline in farming was again apparent in the Province of Quebec. Bush orders at Chicoutimi had been curtailed, but elsewhere, logging was active. No marked change was noted in manufacturing, paper and aluminum industries being busy, with foundries somewhat slack. Building construction remained unchanged, the greatest amount of activity in this line being on maintenance work. Three Rivers had men employed on sewer construction. Transportation was quiet. Trade was good at Quebec City. In the Women's Division a number of orders were listed and placements effected.

With the usual fall work nearly completed, the demand for farm help in Ontario was much less, although plenty of casual work, such as corn husking, silo filling, threshing of beans, and harvesting and drawing of sugar beets and turnips was available in some localities. Good ploughmen were scarce, with wages running around \$15 to \$20 monthly. Logging, except at North Bay and Timmins, was somewhat quiet. In the latter district winter camps were in operation, but were filled to capacity with old employees, so that there was no call for extra bushmen. Mining showed little change. Prospects were brighter, however, at Port Arthur, and at Timmins the industry remained

steady. Manufacturing continued to show improvement. Not many new workers had been placed, but regular staffs were well maintained and former employees called to positions when needed. Iron and steel was more active, showing a consistent gain in employment, due, in part, to winter orders for automobile accessories, General Motors having nearly all their staff back at work. Vegetable and fruit canneries, also wineries, were slacker, as their seasonal run was about completed. Textiles were running well. New Toronto reported that nearly all factories had more men on their payrolls than at any time since 1930 and that the number of hours worked had been greater in aggregate than in 1934, 90 per cent of the industries reporting a more healthy situation than in the previous year. The recent fine weather had aided building construction noticeably, as little time had been lost for several weeks, but although a number of skilled and unskilled workmen were employed, the demand was far short of the supply available. Highway construction, also relief work, continued. Railway construction likewise showed improvement, as several requests had been received for extra road gangs. At Fort William eastern shipments, while fairly steady, were not so great as the arrival of grain from the West, although the latter had slackened considerably and lake head elevators were nearing storage capacity. Trade was good. The demand for household workers continued in the Women's Division, but experienced help was lacking.

Requests for farm help were holding up fairly well in the Prairie Provinces and all orders where reasonable wages were offered were readily filled. Fine weather had given the farmers a good chance for fall ploughing. Logging was more active about Winnipeg, but only fair in Saskatchewan and Alberta. Mining showed some activity, but with no call for miners. Manufacturing recorded little change. Construction was proceeding on all buildings already underway at Winnipeg. Elsewhere, building was somewhat quieter and rapidly nearing completion for the season. Trade was better. A slight decrease was reported in placements in the Women's Section and experienced housekeepers, as usual, were difficult to obtain.

Harvesting and outside farm work was about completed in British Columbia, although a number of men were still employed in the fruit industry. Logging was quiet, but all mills, lumber and shingle, were working regularly. Established mines continued to operate stead-

ily, but there was no call for miners. Fishing of herring and chum salmon was well started. Manufacturing was unchanged. Building trades reported a fair amount of repair work, but little new construction. National Defence camps were receiving their quota of men and highway construction was also progressing. Drydocks and shipyards at Prince Rupert were

quite active, but longshoring and shipping quiet. Strike conditions prevailed at the waterfront at New Westminster and Vancouver, but at Victoria, considerable work was available for longshoremen. Trade was fair. In the Women's Section a moderate demand existed for experienced domestics and mothers' help.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN SEPTEMBER, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on October 1 was 9,414, the employees on their payrolls numbering 997,017 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for September was 1,763 having an aggregate membership of 166,764 persons, 13.0 per cent of whom were without employment on

October 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of October as reported by Employers

Industrial employment at the beginning of October showed a substantial improvement, according to statements received by the Dominion Bureau of Statistics from 9,414 firms, whose staffs aggregated 997,017 persons, as compared with 964,977 in the preceding month. This increase of 32,040 workers is the largest so far reported in any month of the present year, while it also exceeds that indicated between September 1 and October 1 in any of the fourteen preceding years for which employment statistics are available. In only eight of these years has the trend been upward at the beginning of October, losses having been indicated at that date in the remaining six autumns, with the result that the average change from September 1 to October 1 in the period, 1921-1934, is a small increase. The considerable advance noted at the latest date, which compares favourably with this slight, average gain, raised the index of employment from 102.7 at September 1 to 106.1 at the beginning of October; this

was the highest point reached since September 1, 1931. On October 1, 1934, the index had been 100.0. After adjustment for seasonal fluctuations, the index increased from 98.5 in the preceding month to 101.1 at October 1, 1935.

The unadjusted index (based upon the average for the calendar year 1926 as 100), has been as follows at October 1 in the fifteen years for which data are on record: 1935, 106.1; 1934, 100.0; 1933, 90.4; 1932, 86.7; 1931, 103.9; 1930, 116.2; 1929, 125.6; 1928, 118.8; 1927, 110.3; 1926, 106.5; 1925, 99.5; 1924, 95.0; 1923, 100.7; 1922, 95.8 and 1921, 91.3.

The most outstanding features of the October 1 survey of employment were the unusually pronounced increases in manufacturing, in which the co-operating establishments absorbed more than 12,500 additional workers, and in logging, which directly provided work for over 10,600 more persons than at September 1. The expansion in each of

these industries was greater than at October 1 in any other year for which statistics are available. Mining, transportation, construction and maintenance and trade also recorded heightened activity, while the trend was seasonally downward in services.

### Employment by Economic Areas

Firms in all provinces except British Columbia showed considerable improvement, that in Quebec and Ontario being most pronounced. The situation generally was better than at the beginning of October in any of the last three years.

*Maritime Provinces.*—A further and larger increase was indicated in the Maritime Provinces, where the 657 co-operating employers

vegetable food, textile and iron and steel plants, while lumber mills were slacker. Among the non-manufacturing groups, logging and highway construction afforded greatly increased employment, while there were small gains in shipping and longshore work and in trade. On the other hand, steam railway operation and construction and hotels and restaurants showed curtailment.

*Quebec.*—For the sixth consecutive month, activity advanced in Quebec. The expansion took place chiefly in logging, manufacturing and highway construction, while trade also showed an increase. Within the group of factory employment, the greatest gains were in textile, food, iron and steel, clay, glass and

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

enlarged their payrolls from 76,453 persons on September 1, to 80,591 at the beginning of October. This was the sixth consecutive monthly advance recorded since April 1; it considerably exceeded the gain noted at the same date last year, and compared favourably with the decline that, on the average, has been reported at October 1 in the years since 1920. The index, at 112.9 at the latest date, was nearly ten points higher than at October 1, 1934, when it stood at 103.1. Manufacturing as a whole showed improvement over the preceding month, mainly in

stone, tobacco and beverage and non-ferrous metal works; on the other hand, employment in the lumber, leather and pulp and paper divisions was not so brisk as at September 1, 1935. Services, railway construction and communications also showed a moderate falling-off in activity. Statistics were compiled from 2,234 firms in Quebec with 283,468 workers, compared with 273,190 at the beginning of September. A much smaller advance had been noted on October 1, 1934, while, on the average, the tendency at the beginning of October in the last fourteen years has been

retrogressive. The index, at 103.1 at the latest date, was seven points higher than at October 1, 1934.

*Ontario.*—The trend was upward in Ontario, according to 4,149 employers of 414,523 persons, or 16,372 more than at the beginning of September. A decidedly smaller gain over the preceding month had been reported on October 1, 1934, when the index, at 104.8, was several points lower than that at the latest date, viz., 108.1. While the movement in employment has usually been favourable at the beginning of October in the experience of the years since 1920, the advance at the latest date was substantially larger than the average increase between September 1 and October 1. Manufacturing as a whole (particularly in iron and steel, textile, vegetable food and electrical apparatus factories), logging, construction and trade showed heightened activity as compared with the preceding month, while employment declined slightly in animal food and tobacco and beverage plants, and in transportation and services.

*Prairie Provinces.*—There was a further increase in employment in the Prairie Provinces at the beginning of October, improvement occurring in manufacturing, mining, communications, transportation and highway construction, while building and railway construction, services and trade were quieter; the reductions in payroll in railway construction and maintenance were considerable. Within the manufacturing group, vegetable food, textile and iron and steel plants showed heightened activity, but animal food and lumber mills were slacker. Returns for the date under review were received from 1,376 firms with an aggregate working force of 129,765 employees, compared with 126,921 on September 1. A larger advance had been recorded at the beginning of October in 1934, but the index was then seven points lower than the 102.7 of the latest date.

*British Columbia.*—Employment in British Columbia showed curtailment, mainly in manufacturing (owing to the termination of

Relative Weight of Employment by Economic Areas as at Oct. 1, 1935.....	100.0	8.1	28.4	41.6	13.0	8.9

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

the fish-canning season), while transportation, construction and services also released employees. On the other hand, logging and trade reported greater activity, and, within the group of factory employment, lumber and vegetable food factories also recorded improvement. Data were tabulated from 999 employers, whose payrolls declined from 90,262 persons on September 1, to 88,670 at the beginning of October. Losses on a smaller scale had been registered on October 1, 1934, but the index then, at 95.4, was lower by nearly eleven points than on the date under review, when it stood at 106.0.

Table 1 gives index numbers by economic areas.

### Employment by Cities

The trend at the beginning of October was downward in Quebec City and Vancouver, but was upward in Montreal, Toronto, Ottawa, Hamilton, Windsor and Winnipeg. Employment in these eight centres was in greater volume than at the corresponding date in 1934, 1933 or 1932.

*Montreal.*—There was a further increase in employment in Montreal, where the 1,307 co-operating establishments employed 136,947 persons, or 4,150 more than on September 1. Manufacturing, shipping, construction and trade showed the greatest gains; within the manufacturing group, vegetable food, textile, iron and steel and tobacco and beverage factories indicated considerable expansion, while the leather industry was rather slacker. Much smaller advances had been noted at the beginning of October of last year, and the index of employment was between four and five points lower.

*Quebec.*—Activity in Quebec declined at the date under review, 133 workers having been laid off since September 1 by the 167 employers whose returns were compiled, and who had 13,364 on their paylists at October 1. There were seasonal losses in services, and manufactures were also rather dull, while moderate improvement occurred in construction. The index was a few points higher than at the beginning of October, 1934, when a much larger decrease had been reported.

Relative Weight of Employment by Cit- ies as at Oct. 1, 1935.	13.7	1.3	12.4	1.7	3.2	1.4	3.9	3.3

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

*Toronto.*—Continued expansion was indicated in Toronto, according to 1,397 firms employing 123,300 persons, compared with 120,379 in their last report. Manufacturing was much busier, particularly in the textile, printing and paper goods, chemical, electrical apparatus and iron and steel groups; building construction and trade also absorbed more workers. On the other hand, road construction, transportation and services were rather quieter. Similar additions to staffs, on the whole, had been reported on October 1 of a year ago, but employment generally continues at a better level, the index, at 101.1 at the latest date, being 4.6 points higher.

*Ottawa.*—Construction was more active, while manufacturing and trade showed minor gains. The forces of the 176 employers furnishing data aggregated 13,612 workers, or 251 more than on September 1. The index of employment was nearly five points higher than at the same date in 1934, when little general change had been indicated.

*Hamilton.*—Considerable improvement was noted in Hamilton, mainly in manufacturing, where there were gains in vegetable food, electrical apparatus and iron and steel plants. Building construction was busier and there was a minor gain in trade, while small losses occurred in transportation and services. Statements were tabulated from 272 firms with 32,027 employees, compared with 30,448 in the preceding month. The index number at the beginning of October of last year was lower by nearly 16 points; a slight decline on the month had then been reported.

*Windsor.*—There was an increase in the number employed in Windsor, chiefly in construction and trade, while manufacturing was quieter. One hundred and sixty-nine establishments employed 14,456 workers, as against 14,225 on September 1. A decline had been noted on October 1, 1934, when employment was in much smaller volume.

*Winnipeg.*—Improvement was indicated in Winnipeg on October 1, when the 458 co-op-

Relative Weight of Employment by Industries as at Oct. 1, 1935.....	100.0	52.1	3.2	6.0	2.2	10.3	13.8	2.6	9.8

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

erating firms employed 38,989 workers, or 414 more than in the preceding month. Manufacturing, communications and trade were more active, while building construction reported curtailment. Rather more marked betterment had been shown at the beginning of October a year ago, but the index then was several points lower, standing at 86.5, as compared with 91.1 on October 1, 1935.

*Vancouver.*—Employment in Vancouver showed its first curtailment since the beginning of May, according to 413 employers with 32,867 persons on their payrolls, compared with 33,541 on September 1. Manufacturing reported little general change, but there was a falling-off in construction and transportation. A smaller reduction on the whole had been recorded on October 1, 1934, when the index stood at 90.5, as compared with 103.5 at the beginning of October of the present year.

Index numbers by cities are given in Table 2.

### Employment by Manufacturing Industries

There was a further substantial advance in factory employment on October 1, when the 5,565 co-operating establishments reported 519,711 operatives, or 12,548 more than on September 1. Seasonal curtailment was noted in fish canneries and lumber mills, and there was also a slight decline in leather factories. All other main groups of manufactures, however, showed improvement. The gains in iron and steel were especially pronounced, this industry absorbing over 6,400 additional workers since September 1; the increase was of particular interest because it is contrary to the usual seasonal trend at the beginning of October in the experience of the years 1921-1934. There were also large advances in textile and vegetable food factories, while the

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Oct. 1, 1935	Sept. 1, 1935	Oct. 1, 1934	Oct. 1, 1933	Oct. 1, 1932	Oct. 1, 1931	Oct. 1, 1930

Non-metallic mineral products.....	1.4	142.7	141.6	136.3	128.2	121.4	124.6	138.2
Miscellaneous.....	0.6	130.2	128.3	121.7	104.1	99.1	103.2	115.1

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

expansion in electrical apparatus, non-ferrous metals, clay, glass and stone and chemical works was considerable.

On the average employment in manufacturing at the beginning of October in the last fourteen years has shown very little change from September 1, the gains recorded in some of these autumns just about offsetting the declines indicated in the remainder; the expansion on the date under review greatly exceeds that noted on October 1 in any other year since 1920 in which the trend has been favourable. The unadjusted index of employment, at 103.3, was 9.4 per cent higher than at October 1, 1934, and was also higher than in any other month since November 1, 1930. After correction for seasonal influences, the index rose from 98.1 at September 1, 1935, to 100.6 at the date under review.

The crude index numbers in manufacturing at the beginning of October in the fifteen years of the record are as follows: 1935, 103.3; 1934, 94.4; 1933, 86.7; 1932, 84.1; 1931, 91.8; 1930, 107.8; 1929, 120.2; 1928, 115.7; 1927, 106.4; 1926, 104.6; 1925, 98.8; 1924, 92.7; 1923, 99.4; 1922, 93.8, and 1921, 88.0. The 1926 average is the base used in computing these indexes.

The increase noted on October 1, 1935, continues the uninterruptedly favourable movement that has characterized factory employment since the opening of the year. During the last nine months, over 80,300 persons have been added to the staffs of the approximately 5,400 reporting firms, while the index has advanced from 87.4 on January 1 to 103.3 at the beginning of October, or by 18.2 per cent. The period of expansion in 1934 extended over the same months, and there was almost the same percentage increase between January 1 and October 1, when the index, at 94.4, was considerably lower than at the latest date.

Index numbers by industries are given in Tables 3 and 4.

*Animal Products—Edible.*—There were losses in dairies and fish-preserving establishments, those in the latter being especially pronounced following an unusually active season. Statistics were received from 273 manufacturers, employing 23,648 persons, as compared with 25,524 in the preceding month. This contraction, which was most pronounced in British Columbia, was on a smaller scale than that registered on the corresponding date of last year, when the index was nearly eleven points lower.

*Leather and Products.*—A slight decline was indicated in the leather industry on October 1, footwear factories showing reductions in

staffs, while miscellaneous leather goods experienced little general change. The 281 employers making returns reported 22,408 workers, or 187 fewer than on September 1. Employment at the beginning of October of a year ago was practically unchanged from the preceding month; the index number then stood at 100.0, compared with 110.1 on the date under review.

*Lumber and Products.*—Further seasonal contractions in personnel were indicated in the lumber group, in which employment was at a higher level than on October 1, 1934. The decrease on the date under review took place almost entirely in rough and dressed lumber mills, while furniture and other wood-using factories were decidedly busier. A combined working force of 42,061 persons was reported by the 819 co-operating manufacturers, as compared with 42,994 at the beginning of September. The tendency was downward in the Maritime and Prairie Provinces and Quebec, but was elsewhere favourable.

*Musical Instrument.*—A slight gain was registered in musical instrument plants, in which employment was at much the same level as during last autumn. Thirty-six establishments reported 1,437 employees, as compared with 1,377 in the preceding month.

*Plant Products, Edible.*—Practically all branches of the vegetable food division showed improvement; the largest gains, however, occurred in canning and sugar and syrup factories. The staffs of the 455 reporting firms aggregated 39,351 persons, or 2,782 more than in their last return. Employment was more active in all provinces, firms in Ontario showing the most pronounced advances. The general increase was greater than that registered on the corresponding date in 1934, when the index was slightly lower.

*Pulp and Paper Products.*—Additions to their staffs were reported by 586 employers in this group; they had 59,669 workers on their payrolls, as compared with 59,516 at the beginning of September. The improvement took place in paper products and in printing and publishing houses, while pulp and paper mills were slacker. The gains occurred mainly in Ontario. A larger advance, on the whole, had been indicated at the beginning of October a year ago, and the index number then was several points lower.

*Rubber Products.*—Employment in rubber goods showed improvement on October 1, 1935; data were compiled from 50 firms with 11,749 employees, as against 11,613 in their last report. A decline had been recorded on

the same date in 1934, when the index of employment was fractionally lower.

*Textile Products.*—Woollen, cotton, hosiery and knitting mills and garment and other textile factories reported heightened activity; 986 manufacturers enlarged their payrolls from 96,030 workers at the beginning of September, to 99,853 on the date under review. Quebec and Ontario recorded the bulk of this expansion, although the tendency was generally favourable. Much smaller gains had been noted at the beginning of October last year, and the index then was lower by between seven and eight points than on October 1, 1935.

*Tobacco, Distilled and Malt Liquors.*—No general change in employment occurred in these industries at the beginning of October, according to the 169 establishments furnishing statistics, which employed 15,867 workers; distilled and malt liquor factories showed greater activity, but tobacco and other branches of the group were slacker. Employment was in greater volume than in the autumn of 1934, although larger additions to payrolls had then been shown.

*Chemicals and Allied Products.*—Continued gains were indicated in chemical factories, 192 of which reported a staff of 10,725, as compared with 10,515 in the preceding month. Most of the gain was in Ontario.

*Electric Light and Power.*—Slight improvement occurred in electric current plants on October 1, when 99 establishments employed 15,104 workers, compared with 15,047 on September 1. A similar increase had been noted on the corresponding date of last year; the index number then stood at 117.6, compared with 119.6 on October 1, 1935.

*Electrical Appliances.*—Heightened activity was indicated in electrical apparatus works, 110 of which had 14,065 employees, or 675 more than in their last report. This gain, which took place mainly in Ontario, was larger than that noted on October 1, 1934, when the index was many points lower.

*Iron and Steel Products.*—Almost all branches of the iron and steel industry shared in the upward movement indicated at the beginning of October; the largest increases were in the automobile, railway car and crude, rolled and forged divisions, but machinery, steel ship-building, heating appliance, wire, foundry and machine shop and other groups also showed considerable improvement. Statements were received from 842 manufacturers, whose payrolls aggregated 111,591 persons, as compared with 105,157 in the preceding month. Employment advanced in all provinces, the gains in

Ontario being most noteworthy. Curtailment had been indicated at the beginning of October of last year and of most other years of the record. Employment on October 1, 1934, was at a lower level, the index then standing at 70.6, compared with 84.7 at the latest date.

*Non-ferrous Metal Products.*—A combined working force of 19,928 persons was reported by the 157 co-operating employers, who had 19,520 at the beginning of September. There was improvement in the precious and the base metal divisions, and in smelters and refineries. The index was some thirteen points higher than in the autumn of 1934.

### Logging

Statements were tabulated from 288 logging companies, whose staffs were enlarged by 10,624 workers to 32,174 on the date under review. This advance was on a much greater scale than in the early autumn of 1934, or of any other year of the record. The index, at 115.8, on October 1, 1935, was only once exceeded on that date in the last fourteen years, viz., by that of 117.1 indicated at the beginning of October 1, 1929. Camps in Quebec absorbed a large proportion of the men added to payrolls on October 1 of the present year, but the trend was generally upward, except in the Prairie Provinces.

### Mining

*Coal-Mining.*—There was an increase in coal-mines, in which the index of employment was lower by two points than on October 1, 1934, when the improvement over the September 1 payrolls had been on a much greater scale. Returns were received from 100 operators employing 24,057 persons on October 1, 1935, as compared with 23,397 in their last report. The gains took place mainly in the coal-fields of the Prairie Provinces.

*Metallic Ores.*—Employment in this group showed its first decline since the opening of the year; 171 employers reported 27,614 workers, or 162 fewer than at the beginning of September. Ontario registered most of the reduction. A gain had been noted on the corresponding date last year, but the index number was then many points lower.

*Non-Metallic Minerals, other than Coal.*—Little general change was reported in this group, in which statistics were received from 82 firms employing 7,790 persons, compared with 7,771 in the preceding month. The index was decidedly higher than on October 1, 1934, when a large reduction had been recorded.

## Communications

Employment in communications was unchanged from the preceding month; the companies and branches furnishing data reported 21,705 employees, as compared with 21,708 on September 1. The index was fractionally higher than in the autumn of 1934, when the tendency had been downward.

## Transportation

*Street and Electric Railways and Cartage.*—A minor increase was indicated in local transportation, 82 persons being added to the forces of the 209 co-operating firms, who had 26,357 on their payrolls. Employment in this industry was in rather greater volume than on October 1 of last year, when a similar advance had been shown.

*Steam Railways.*—Statistics were tabulated from 101 employers in the steam railway operation group, whose payrolls increased from 59,956 on September 1, to 60,260 at the beginning of October. An advance had also been indicated on the same date of last year, when the index, at 75.0, was fractionally lower than at the latest date, viz., 75.8. There was a considerable expansion in the Prairie Provinces, while the tendency in the Maritimes, Ontario and British Columbia was downward.

*Shipping and Stevedoring.*—Improvement was registered in the water transportation group, in which 99 companies employed 15,677 workers; this was an increase of 299 as compared with their payrolls in the preceding month. A larger advance had been noted on October 1 of last year, when the index stood at 92.3, as compared with 94.0 at the beginning of October of the present year.

## Construction and Maintenance

*Building.*—There was an increase in employment in building, 1,581 persons being added to the forces of the 685 co-operating contractors. They had 27,304 employees; this number was greater than that reported at the beginning of October of a year ago, when a smaller gain had been indicated. In the Prairie Provinces, the trend was unfavourable, but elsewhere improvement took place, that in Ontario being most marked.

*Highways.*—Employment in this group declined in British Columbia, while the remain-

ing provinces reported heightened activity. Statements were tabulated from 371 employers, whose staffs, standing at 79,013, were larger by 8,105 workers than on September 1. The number of persons employed in the group was smaller than on October 1, 1934, when a decrease had been noted.

*Railways.*—A considerable falling-off in employment was reported on railway construction. The forces of the 32 companies and divisional superintendents furnishing returns declined from 33,646 at the beginning of September, to 31,614 on the date under review. A large reduction had also been registered on October 1, 1934, when the level of employment was practically the same.

## Services

The closing of summer hotels caused a pronounced contraction in employment in this group, in which other divisions showed little general change. The staffs of the 460 firms in this group whose returns were received, numbered 26,032 on October 1, as against 27,672 in the preceding month. The seasonal declines also indicated on the same date last year involved a larger number of workers, and employment then was not quite so active in the service division.

## Trade

Retail and wholesale trading establishments increased their personnel; 1,167 firms reported 97,709 employees, compared with 96,054 in the preceding month. This advance was smaller than that recorded on October 1 of 1934, but exceeded the average gain noted at the beginning of October in the years, 1921-1934. The index on the date under review stood at 123.8, compared with 120.0 on October 1, 1934.

## TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of September, 1935

The term unemployment as used in the accompanying article has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades or who are idle owing to illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

participating in this upward employment movement. Several of the provinces, however, indicated retarded activity, Quebec with a 2 per cent loss showing the most unfavourable situation, attributable mainly to employment declines in the manufacturing industries, particularly the leather trades. In New Brunswick and British Columbia also the tendency was toward lessened employment, though the changes from August were but fractional. Unemployment in the coal mines of Alberta eased off considerably from August and was the determining factor in the noteworthy improvement reported from that province. In

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Some improvement in the situation was evident among local trade unions at the close of September from the previous month according to the reports compiled from a total of 1,763 labour organizations, involving 166,764 members. Of these, 21,759 were registered as idle on the last day of the month, a percentage of 13.0 as contrasted with 14.2 per cent in August. A greater rise in available work was reflected from September, 1934, when unemployment stood at 16.4. This percentage for the month under review was the lowest to have been recorded since the close of October, 1930. The advancement noted over August conditions was generally distributed, practically all industrial divisions in Canada, as a whole,

Ontario the garment trades accounted chiefly for the gains recorded over August, and in Nova Scotia, Manitoba and Saskatchewan also moderate expansion was recorded. Employment for Ontario and Manitoba members was in substantially better volume than in September a year ago, the improvement being of a rather general character throughout the majority of trades and industries. In British Columbia recovery, on a somewhat smaller scale, was recorded, activity also tending upward in Saskatchewan, Alberta, Nova Scotia and Quebec. New Brunswick was the only province to report a lessening in work available which was, however small.

Each month the records of unemployment in the largest city in each province except Prince Edward Island are tabulated separately. Edmonton unions during September reported a considerably higher level of activity than in August, and the advances recorded by Toronto unions were also noteworthy. In Winnipeg the employment gains shown were of moderate proportions, while Vancouver conditions remained substantially the same, with a slightly favourable tendency. Halifax unions on the other hand reported fair-sized recessions in work afforded, and in Montreal, Saint John and Regina nominal declines occurred. Compared with the returns for September last year Toronto, Edmonton, Vancouver and Winnipeg members were much better engaged during the month reviewed, Regina unions showing moderate gains and Montreal lesser advances. Conditions in Saint John and Halifax, however, were much quieter than in September a year ago.

Appearing with this article is a chart which shows the unemployment trend by months from January, 1929, to date. There was a slight drop in the level of the curve throughout September when compared with the previous month, indicative of a greater prevalence of available work. The curve at the close of the month also remained at a point below that of September last year, the divergence being more pronounced than when compared with August, showing employment recovery of larger proportions.

The manufacturing industries during September continued the favourable trend of the last few months, the 491 organizations making returns with 52,790 members, showing an unemployment percentage of 12.7 as compared with 14.0 per cent of inactivity in August. A betterment of conditions was also apparent from September, 1934, when 16.0 per cent of idleness was registered. Extensive employment expansion from August was noted by wood, garment, fur, and glass workers, and bakers and confectioners. Among textile and carpet workers moderate gains were registered, iron and steel workers and printing tradesmen showing a very slightly upward trend. On the other hand, leather workers indicated pronounced losses in activity from August. General labourers also registered considerably retarded employment, and cigarmakers, brewery workers, papermakers, metal polishers, and hat and cap workers lesser declines. Among jewellery workers the percentage of idleness remained the same as in the previous month. In contrasting with the returns for September last year heightened activity, on a large scale, was recorded by general labourers, garment and wood workers. Among fur and

glass workers the percentage gains were substantial though involving few members, while the situation in the iron and steel trades improved moderately. Papermakers reported a considerably better situation during the month reviewed, and employment for bakers and confectioners, brewery workers and printing tradesmen also tended upward, though the variation from September a year ago was slight. There was a decided drop in work available, however, among leather workers, and pronounced curtailment was evident among textile and carpet, and jewellery workers. Cigarmakers also suffered noteworthy losses in activity, and moderate declines were apparent among metal polishers and hat and cap workers.

Coal mining on the whole employed larger working forces during September than in either the previous month or September last year, the improvement in the former comparison being more substantial. This was manifest by the reports forwarded from 48 unions with a combined membership of 15,181 persons, 1,481 or 9.8 per cent of whom were without work at the end of the month in contrast with percentages of 14.7 in August and 11.5 in September last year. The Nova Scotia and Alberta mines shared substantially in the employment increases reported over August, while in British Columbia the same volume of unemployment was recorded in both months. Compared with the reports for September, 1934, there was a considerable slowing up of employment in the British Columbia mines during the period surveyed, and in Alberta recessions on a small scale occurred. Activity for Nova Scotia miners, however, was in slightly greater volume. In addition to the total idleness recorded, many miners were reported as being but partially employed.

Activity in the building and construction trades during September was maintained to a slightly higher degree than in August, though considerable slackness continued to be in evidence. A decidedly better situation was shown, however, from September, 1934. For September, reports were received from 191 local unions of these tradesmen with a membership aggregate of 18,160 persons, 41.5 per cent of whom were unemployed at the close of the month contrasted with percentages of 44.1 in August and 53.9 in September a year ago. Bridge and structural iron workers, hod carriers and building labourers, and tile layers, lathers and roofers indicated a sharp rise in work available from August, and electrical workers and granite and stone-cutters also were much more busily engaged. Noteworthy improvement in conditions was reflected by plumbers and steamfitters, while

the advances registered by bricklayers, masons and plasterers were slight. Retarded activity of moderate degree was shown among painters, decorators and paperhangers, and contractions of a secondary nature among steam shovelmen and carpenters and joiners. Improved conditions were reflected in every group of trades when compared with the September, 1934, returns, which were espec-

ially marked among plumbers and steam-fitters, tile layers, lathers and roofers, hod carriers and building labourers, granite and stonecutters, steam shovelmen and bridge and structural iron workers. Recovery of substantial proportions was also evidenced among carpenters and joiners, and bricklayers, masons and plasterers, while the gains indicated by painters, decorators and paperhangers, and electrical workers were on a smaller scale.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

Sept., 1935.....	6.0	8.7	20.4	10.4	8.1	6.2	13.7	14.0	13.0

The transportation industries with 778 organizations reporting in September a membership of 56,331 persons, showed that 3,641 were idle on the last day of the month, a percentage of 6.5 as compared with 6.9 per cent of inactivity in August, and 8.1 per cent in September last year. Steam railway employees, whose returns involved over 77 per cent of the entire group membership reported, were afforded a slightly greater volume of work than in either of the months used for comparative purposes. Among navigation workers there was some slowing up of activity from August, but the situation was much better than in September a year ago. Street and electric railway employees maintained the same volume of unemployment as in August, though fractional improvement was noted from September, 1934. Among teamsters and chauffeurs the tendency was slightly less favourable in both comparisons.

Unemployment for retail shop clerks eased off to some extent during September from both the previous month and September last year as was apparent from the reports received from 4 organizations with 1,878 members. Of these, 195 or a percentage of 10.4 were without work at the end of the month as contrasted with percentages of 12.3 in August and 11.9 in September, 1934.

Civic employees reflected an almost unchanged situation during September from August, what small variation was noted being in a favourable direction. Conditions were also nominally better than in September a year ago. Reporting for September 77 organizations of these workers with a total of 8,104 members indicated an unemployment percentage of 2.9 as compared with 3.0 per cent at the close of August, and 3.2 per cent in September last year.

In the miscellaneous group of trades moderate increases in work available were noted during September from the preceding month though unemployment was at a considerably higher level than in September, 1934. This was manifest by the reports tabulated for September from 124 unions embracing a membership of 5,080 persons, 985 of whom were idle on the last day of the month, a percentage of 19.4 as compared with percent-

ages of 22.0 at the close of August and 14.6 in September a year ago. Hotel and restaurant, and theatre and stage employees, and stationary engineers and firemen all shared in the advancement noted over August, barbers and unclassified workers showing but slightly restricted activity. In comparing with the returns for September, 1934, in the miscellaneous group of trades, barbers suffered large curtailment of employment during the month surveyed, and conditions for hotel and restaurant employees were distinctly unfavourable. Stationary engineers and firemen, however, were afforded a much better volume of work, and improvement, on a smaller scale, was noted by unclassified workers. Practically no change occurred among theatre and stage employees.

Fishermen who reported a fully engaged situation in August showed a noteworthy falling off in activity during September, though recovery on a large scale was reflected from September of last year. This was evident

from the reports furnished by 4 unions of these workers, with 599 members, 100 or 16.7 per cent of whom were unemployed on the last day of the month. At the close of September, 1934, the percentage of idleness stood at 44.4.

The 4 unions of lumber workers and loggers making returns at the close of September with 619 members recorded an unemployment percentage of 6.9 compared with 7.2 per cent in August, and 44.7 per cent in September a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1934 inclusive, and also the percentage of unemployment by provinces for September of each year from 1919 to 1932 inclusive, and for each month from January, 1933, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for September, 1935

The volume of business transacted by the offices of the Employment Service of Canada during the month of September, 1935, showed a gain of 7 per cent in the average daily placements over those of the preceding month, although the total number of placements for the month under review was lower, due to there being fewer working days. A gain of nearly 18 per cent was also reported over the corresponding period a year ago. Increased placements over August, 1935, were recorded in logging, mining, trade and services, while losses occurred in farming, construction and maintenance, manufacturing and transportation, the highest gain being in logging and the heaviest declines in farming and construction and maintenance. In comparison with September, 1934, all industrial divisions, except logging, mining and transportation, registered expansion, a noteworthy increase in farm placements being effected, with smaller gains being shown in construction and maintenance services, and manufacturing. The increase in trade was nominal only. Logging recorded the greatest decline.

The accompanying chart shows the trend of employment since January, 1933, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilation being made semi-monthly. It will be seen from the graph that the curve both of vacancies and placements in relation to applications registered a decline during the first half of September, but during the latter half of the month

fluctuated less than one per cent. At the close of the period, however, both levels were considerably higher than those reached at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 63.9 during the first half and 63.1 during the second half of September, 1935, in contrast with the ratios of 59.1 and 52.7 during the corresponding periods of 1934. The ratios of placements to each 100 applications during the periods under review were 59.1 and 59.2, as compared with 55.1 and 50.1 during the corresponding month of 1934.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during September, 1935, was 1,601, in contrast with that of 1,488 during the preceding month and with 1,348 in September a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,521, in comparison with 2,236 in August, 1935, and with 2,414 during September last year.

The average number of placements made daily by the offices of the Service during September, 1935, was 1,491, of which 998 were in regular employment and 493 in work of one week's duration or less, as compared with a total daily average of 1,392 during the preceding month. Placements in September a year ago averaged 1,269 daily, consisting of 797 placements in regular and 472 in casual employment.

During the month of September, 1935, the offices of the Service referred 37,901 persons to

vacancies and effected a total of 35,775 placements. Of these, the placements in regular employment were 23,946, of which 18,993 were of men and 4,953 of women, while placements in casual work totalled 11,829. The number of vacancies reported by employers was 28,331 for men and 10,079 for women, a total of 38,410, while applications for work totalled 60,496, of which 45,959 were from men and 14,537 from women. Reports for August, 1935, showed 40,164 positions available, 60,363 applications made and 37,566 placements effected, while in September, 1934, there were recorded 32,350 vacancies, 57,916 applications for work, and 30,441 placements in regular and casual employment.

NOVA SCOTIA

During the month of September, 1935, positions offered through employment offices in Nova Scotia were nearly 2 per cent higher than in the preceding month, but over 14 per cent less than during the corresponding month of last year. There was a gain in placements of over 3 per cent when compared with August but a decline of nearly 12 per cent in comparison with September, 1934. All industrial divisions participated in the decline in placements from September of last year, the largest reductions being in logging and construction and maintenance. Placements in construction and maintenance numbered 549 and in services

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

1934.....	223,564	182,527	406,091
1935 (9 months).....	163,329	97,757	261,086

247. Of the latter, 193 were of household workers. During the month 304 men and 94 women were placed in regular employment.

NEW BRUNSWICK

There was a nominal decline only in the number of orders received at employment offices in New Brunswick during September when compared with the preceding month and a gain of nearly 11 per cent in comparison with the corresponding month last year. Placements were over 6 per cent higher than in August and over 14 per cent above September, 1934. The increase in placements over September of last year was due to a greater demand for household workers, as a small gain under construction and maintenance was offset

by a loss in manufacturing, and the changes in other groups were nominal only. During the month 415 placements were made under construction and maintenance and 555 in services. Of the latter, 455 were of household workers. Placements in regular employment numbered 389 of men and 96 of women.

#### QUEBEC

During September, employment offices in the province of Quebec received orders for nearly 2 per cent more workers than in the preceding month, but nearly 2 per cent less than during the corresponding month last year. There was an increase in placements of nearly 9 per cent when compared with August and of less than 1 per cent in comparison with September, 1934. Placements in construction and maintenance and services were considerably higher than during September of last year, while smaller gains were recorded in manufacturing and farming. These increases, however, were almost entirely offset by a large reduction in bush placements. Placements by industrial groups included manufacturing, 146; logging, 905; construction and maintenance, 1,273; trade, 131; and services, 2,495, of which 2,292 were of household workers. There were 2,494 men and 1,848 women placed in regular employment during the month.

#### ONTARIO

Orders listed at employment offices in Ontario during September called for nearly 3 per cent less workers than in the preceding month but over 26 per cent more than during the corresponding month last year. There was a decline of over 4 per cent in placements when compared with August, but an increase of over 26 per cent in comparison with September, 1934. The improvement over September of last year was mainly due to increased placements on highway construction, supplemented by gains in farming, manufacturing and services. The only decline of importance was in logging, with smaller losses in mining and transportation. Placements by industrial divisions included manufacturing, 685; logging, 545; farming, 1,817; transportation, 93; construction and maintenance, 8,496; trade, 258; and services, 3,349, of which 2,278 were of household workers. There were 6,340 men and 1,660 women placed in regular employment during the month.

#### MANITOBA

Opportunities for employment, as indicated by orders received at employment offices in Manitoba during September, were 33 per cent less favourable than in the preceding month and 10 per cent below the corresponding

month of last year. There was a decrease also in placements of nearly 32 per cent when compared with August, and over 10 per cent in comparison with September, 1934. A large reduction in placements on highway construction accounted for the decline from September of last year. This decrease, however, was largely offset by a gain in farming. A decrease in bush placements and a gain in services were the only changes of importance in other groups. Industrial divisions in which most of the placements were effected during the month were farming, 958; construction and maintenance, 732; trade, 51; and services, 695, of which 542 were of household workers. Placements in regular employment numbered 1,710 of men and 332 of women.

#### SASKATCHEWAN

There was a decline of over 7 per cent in the number of workers required through employment offices in Saskatchewan in September when compared with the preceding month, but a gain of over 105 per cent when compared with the corresponding month of last year. Placements were over 12 per cent less than in August, but over 88 per cent higher than in September, 1934. A substantial increase in farm placements accounted for the large gain over September of last year. This increase was slightly offset by declines in construction and maintenance, mining, and services. Placements by industrial divisions included farming 3,745; construction and maintenance 207; trade 54; and services 661, of which 491 were of household workers. There were 3,939 men and 296 women placed in regular employment during the month.

#### ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during September, were nearly 15 per cent better than in the preceding month and nearly 26 per cent above the corresponding month of last year. There was an increase also in placements of over 15 per cent when compared with August and of 22 per cent in comparison with September, 1934. Farm placements were considerably higher than during September of last year and accounted for the increase under this comparison. Services and trade also showed improvement. The only decline of importance was in the highway division of construction and maintenance. Industrial divisions in which most of the placements were effected during the month were farming 2,221; mining 98; construction and maintenance 454; trade 57; and services 526, of which

416 were of household workers. During the month 2,483 men and 345 women were placed in regular employment.

#### BRITISH COLUMBIA

During the month of September, positions offered through employment offices in British Columbia were 8 per cent less than in the preceding month and over 12 per cent below the corresponding month of last year. There was a decrease also in placements of nearly 8 per cent when compared with August and of nearly 13 per cent in comparison with September, 1934. Placements under construction and maintenance showed a decided decline from September of last year, due chiefly to the curtailment of work in the highway division of this group. This decrease was partly offset by a gain in farming. Smaller increases in logging and services were offset by declines in mining and manufacturing. Placements by industrial divisions included logging 67; farming 393; construction and maintenance 1,761; and services 627, of which 415 were of household workers. There were 1,334 men and 282 women placed in regular employment during the month.

#### Movement of Labour

During the month of September, 1935, the offices of the Employment Service of Canada made 23,946 placements in regular employment, 14,388 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 773 were granted the Employment Service reduced transportation rate, 577 travelling to points within the same province as the despatching office and 196 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may wish to travel to distant employment for which no workers are available locally.

The Quebec labour movement during September originated at Hull and comprised the transfer of 177 persons, all to situations outside the province. These were entirely of bushmen, 144 of whom went to the Pembroke zone and 33 to the Sudbury zone. Benefiting by the reduced rate in Ontario during September 370 persons journeyed to various centres throughout the province. At Port Arthur, 217 bushmen, 81 highway construction workmen, 3 mine workers and one saw-mill worker secured certificates for points within the same zone. The Fort William office was instrumental in the despatch of 25

bushworkers, 2 cookees, one mine engineer and one hotel waitress, and Sudbury of 24 bushworkers to employment within their respective zones. Travelling to the Sudbury zone also, were 10 highway construction labourers sent from Toronto and one highway construction foreman from North Bay, while the Port Arthur zone, in addition, received 2 highway construction labourers from Pembroke. The balance of this provincial movement was from Hamilton, from which centre 2 moulders were conveyed to Windsor. Reduced rate certificates were issued in Manitoba during September to 21 persons, 3 of whom were bound for employment within the province and 18 for points outside. All of these received their certificates at the Winnipeg office, included among whom were one farm hand going to Brandon, one hotel cook and one farm housekeeper within the Winnipeg zone and 11 bush workers, 5 cooks and 2 hotel workers to situations in the Port Arthur zone. Saskatchewan transfers at the reduced rate during September numbered 14, of which 13 were within the province and one outside. The latter was of a mine labourer despatched from Regina to Winnipeg. Provincially from Yorkton 11 bushmen journeyed to employment within the same zone, while from Saskatoon one farm hand was conveyed to a point within the North Battleford zone and from Regina one teacher within the district covered by that city office. Business transacted by Alberta offices involved the issue of 184 reduced rate certificates, all to points within the province. For employment within its own zone the Edmonton office transferred 109 farm workers, one farm housekeeper, 46 highway construction workers, 7 mine workers, 4 carpenters, 2 hotel employees and one housemaid. Carried at the reduced rate from Calgary 14 mine teamsters were destined to Drumheller. Vouchers for transportation were granted in British Columbia during September to 7 persons, these proceeding to employment within the province. From Vancouver 5 cannery workers were transported to Kamloops, one housekeeper to Penticton, one mine engineer to Nelson and one farm hand within the Vancouver zone. To the Penticton zone also, one fruit packer was shipped from New Westminster.

Of the 773 persons who took advantage of the Employment Service reduced transportation rate during September 378 were carried by the Canadian National Railway, 392 by the Canadian Pacific Railway, 2 by the Northern Alberta Railway and one by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada During September, 1935

The value of the building authorized in 58\* cities during September stood at \$3,322,026; this was a seasonal decrease of \$971,032 or 22.6 per cent from the total of \$4,293,058 in August, 1935, but an increase of \$1,040,152 or 45.6 per cent in the more significant comparison with September of last year, when the permits granted represented building valued at \$2,281,874.

The value of the building authorized in each month of the present year has been higher than in the same month of 1934, while since January, the aggregate for each month has also exceeded that for the corresponding month in 1933. The cumulative total for the first nine months of 1935 is higher than in any of the last three years, standing at \$36,510,379, as compared with \$19,715,146 in the months January-September, 1934, \$16,394,014 in 1933 and \$35,026,199 in 1932. Although the improvement indicated in the present year is partly due to the granting of construction permits for public buildings in several centres as an unemployment relief measure, the movement in general building operations has also been distinctly more favourable than in the last few years. In comparison with earlier years of the record, from 1920 to 1931, however, the value of building authorizations continues low. The index number of wholesale prices of building materials during the elapsed months of 1935, at 82.1 per cent of the 1926 basic average, was lower than in the same period of any preceding year for which building statistics for the 61 cities are on record, with the exception of 1932 and 1933.

Some 50 cities furnished detailed statistics for September, showing that they had issued about 235 permits for dwellings estimated to cost approximately \$1,000,000, and nearly 1,600 permits for other buildings valued at about \$1,700,000. In addition two cities authorized engineering projects valued at \$23,018. During August, permits were granted for the erection of about 240 dwellings and 1,900 other buildings, estimated to cost approximately \$1,800,000 and \$2,400,000, respectively.

Prince Edward Island, New Brunswick, Quebec, Manitoba and Saskatchewan reported increases in the estimated value of building as compared with August, 1935, that of \$463,449 in Saskatchewan being most pro-

nounced; this increase was largely due to the granting of a permit for a public building at Regina.

As compared with September, 1934, there was improvement in Prince Edward Island, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. The greatest gains of \$450,515 and \$442,267 were reported in Ontario and Saskatchewan, respectively.

Of the larger cities, Toronto and Vancouver registered smaller totals of authorized building than in August, but the value in each case was higher than in September, 1934. Montreal reported a gain in the former, but a loss in the latter comparison, while Winnipeg showed an increase in both comparisons. Of the other centres, Charlottetown, New Glasgow, Fredericton, Moncton, Quebec, Sherbrooke, Westmount, Galt, Hamilton, Kingston, London, Niagara Falls, Owen Sound, Port Arthur, St. Thomas, Windsor, St. Boniface, Regina, Kamloops, Nanaimo and North Vancouver recorded increases as compared both with August, 1935, and September, 1934.

*Cumulative Record for First Nine Months, 1920-1935.*—The following table gives the value of the building authorized by 58 cities during September, and in the first nine months of each year since 1920, as well as index numbers for the latter, based upon the total for the corresponding period of 1926 as 100. The average index numbers of wholesale prices of building materials in the first nine months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in September	Value of permits issued in first nine months	Indexes of value of permits issued in first nine months (1926=100)	Average indexes of wholesale prices of building materials in first nine months (1926 ave. = 100)
1935.....	3,322,026	36,510,379	30.4	82.1
1934.....	2,281,874	19,715,146	16.5	82.8
1933.....	1,986,903	16,394,014	13.6	77.5
1932.....	2,449,735	35,026,199	29.1	77.6
1931.....	10,407,999	88,602,995	73.7	82.7
1930.....	11,093,020	126,361,350	105.2	92.7
1929.....	17,117,017	186,011,017	154.8	99.2
1928.....	20,374,149	165,621,634	137.8	96.7
1927.....	14,462,243	141,152,535	117.5	96.3
1926.....	11,047,503	120,163,936	100.0	100.7
1925.....	10,140,853	98,364,181	81.9	103.1
1924.....	15,055,250	96,817,333	80.6	108.2
1923.....	10,768,898	108,319,972	90.1	111.8
1922.....	11,597,034	116,778,450	97.2	108.5
1921.....	10,907,828	88,573,442	73.7	126.8
1920.....	9,842,677	96,146,278	80.0	144.2

\* The recent amalgamation of East Windsor, Sandwich, and Walkerville with Windsor reduces the number of reporting cities from 61 to 58, without affecting the areas and population covered in these building permits statistics.

The aggregate for the first nine months of this year was higher by 85.2 per cent than in 1934; it was also substantially higher than in 1933 and somewhat higher than in 1932. With these exceptions, the total was less than in any

other year of the record; as already stated, the average index number of wholesale prices of building materials has been lower in 1935 than in previous years of this record, except 1932 and 1933.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, October, 1935, summarized the employment situation as follows:—

There was little change, on the whole, in the state of employment between August 26 and September 23.

Employment improved in coal mining, the woollen and worsted industry, hosiery manufacture, the clothing trades (including boot and shoe manufacture), steel melting, rolling, etc., and the pottery, tinplate and motor vehicle, cycle and aircraft industries. On the other hand, there was a decline in employment in hotel and boarding house service, the distributive trades, building and public works contracting, shipbuilding and ship-repairing, general engineering, certain food industries, linen manufacture and the fishing industry.

Among those workpeople, of ages 16-64, who were insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at September 23, 1935 (including those temporarily stopped as well as those wholly unemployed), was 15.1,\* as compared with 15.0\* at August 26, 1935, and with 16.1 at September 24, 1934. The percentage wholly unemployed at September 23, 1935, was 12.7,\* as compared with 12.4\* at August 26, 1935; while the percentage temporarily stopped was 2.4,\* as compared with 2.6.\* For males alone the percentage at September 23, 1935, was 17.2\* and for females, 9.5\*; the corresponding percentages at August 26, 1935, were 17.1\* and 9.6.\*

The estimated number of insured persons, aged 16-64, in employment in Great Britain at September 23, 1935, was 10,435,000. This was 11,000 more than a month before, and 192,000 more than a year before.

At September 23, 1935, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,576,425. Wholly unemployed, 298,845 temporarily stopped, and 83,340 normally in casual employment, making a total of 1,958,610. This was 10,646 more than a month before, but 123,377 less than a year before. The total

included 1,553,230 men, 69,205 boys, 280,327 women, and 55,848 girls.

The persons on the Registers included 874,553 persons with claims for insurance benefit; 731,986 insured persons with applications for unemployment allowances; 215,338 insured persons (including 24,882 insured juveniles under 16 years of age), not in receipt of insurance benefit or unemployment allowances and 136,733 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at September 23, 1935, was 2,032,221.

### United States

Approximately 350,000 workers were returned to employment during September in the manufacturing and non-manufacturing industries surveyed monthly by the United States Bureau of Labor Statistics. It is estimated that weekly payrolls in these combined industries were more than \$12,000,000 greater than in August.

The major portion of this gain of over a third of a million workers was in manufacturing industries and retail trade, approximately 150,000 additional workers being employed in each of these fields. In addition to these gains, substantial increases were also shown in anthracite and bituminous coal mining, private building construction, and wholesale trade.

Gains were registered in both the durable and non-durable goods groups, seasonal factors contributing largely to the increase of 3.1 per cent in the non-durable goods group. The durable goods group showed a gain of 1.0 per cent. Comparing the index of employment for the durable goods group in September, 1935, with employment in the index base period (1923-25=100) the September index stands at 71.2, which indicates that for every 1,000 workers employed in 1923-25, 712 were employed in September, 1935, while the September employment index for the non-durable goods group (96.9) shows that for every 1,000 workers employed in the index base period 969 were on factory payrolls in September, 1935.

*Manufacturing Industries.*—Factory employment increased 2.2 per cent and payrolls

\* Unrevised percentages.

increased 3.6 per cent from August to September.

A comparison of the preliminary September factory employment index (83.6) with that of September, 1934 (75.9) shows a gain of 10.1 per cent, or approximately 645,000 workers, over the year interval. The preliminary September weekly payroll index (72.1) is 24.3 per cent higher than the corresponding index (58.0) in September, 1934, or an increase of nearly \$28,700,000.

The largest increases in employment were seasonal in character and were shown in the following industries: cotton-seed-oil, cake, and meal (44.5 per cent), confectionery (26.0 per cent), canning and preserving (20.7 per cent), radios (19.2 per cent), fertilizers (18.8 per cent), millinery (16.1 per cent), jewellery (14.4 per cent), and beet sugar (9.7 per cent). Other industries showing substantial seasonal gains in employment were women's clothing (7.2 per cent) stoves (5.2 per cent), men's furnishings (4.5 per cent), furniture (4.0 per cent), cotton goods (3.9 per cent), and shirts and collars (3.4 per cent).

The lighting equipment industry had 9.0 per cent more employees in September than in August, tools (not including edge tools, machine tools, files, and saws) 8.4 per cent, clocks and watches and time-recording devices (8.2 per cent), hardware (6.7 per cent), forgings (5.7 per cent), millwork (5.6 per cent), rubber goods, other than boots, shoes, tires, and inner tubes (5.2 per cent), and shipbuilding (5.1 per cent). The machine-tool industry reported an increase of 4.8 per cent in employment, and gains of 4.2 per cent in employment in the typewriter industry and 3.0 per cent in the cash-register industry indicate an advancing rate of activity. Among the industries of major importance in which relatively smaller gains were reported were blast furnaces, steel works, and rolling mills, foundry and machine-shop products, electrical machinery, apparatus and supplies, and sawmills.

The most pronounced percentage decline in employment was a seasonal decrease of 14.1 per cent in ice cream. Employment in the automobile industry decreased 11.7 per cent, due primarily to shut-downs for the taking of inventory and for model changes. Other industries showing decreases in employment were marble-granite-slate (6.0 per cent), beverages (4.0 per cent), cane sugar refining (3.8 per cent), cement (3.6 per cent), butter (2.6 per cent), aircraft (2.3 per cent), locomotives (2.2 per cent) and fur-felt hats (2.0 per cent).

The indexes of factory employment and payrolls are computed from returns supplied

by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In September, 1935, reports were received from 23,336 establishments employing 3,902,498 workers whose weekly earnings were \$82,463,073. The employment reports received from these co-operating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country and more than 60 per cent of the wage earners in the 90 industries included in the Bureau of Labour Statistics' monthly survey.

*Non-Manufacturing Industries.*—Ten of the 17 non-manufacturing industries regularly surveyed by the Bureau of Labor Statistics showed gains in employment from August to September and 13 industries showed increases in payrolls. The outstanding percentage gain in employment (19.1 per cent) was in the anthracite mining industry. Less pronounced but substantial gains were shown in metal mining (5.5 per cent), retail trade (5.0 per cent), private building construction (4.5 per cent), bituminous coal mining (4.9 per cent) and dyeing and cleaning (3.4 per cent). Among the 7 industries reporting fewer employees in September than in August, the largest decreases were declines of 2.0 per cent in quarrying and 1.4 per cent in laundries.

Responding to seasonal activity, retail trade added approximately 150,000 workers to their payrolls in September. The gains were particularly pronounced in the general merchandising group, composed of department, variety, and general merchandising stores and mail-order houses, and in the group of retail apparel stores. Other lines of retail trade reporting substantial gains in employment were furniture and household goods, coal-wood-ice, and lumber and building materials. Wholesale trade establishments also reported increased employment, the gain of 1.1 per cent indicating the re-employment of nearly 15,000 workers.

Approximately 27,000 workers were re-employed in the coal mining industry, both anthracite and bituminous coal mines reporting sharply increased operations. In bituminous mines, this reflected increased output in anticipation of the strike which occurred in the last week in the month. Smaller gains in employment were shown in metal mining, power and light, year-round hotels, and dyeing and cleaning.

The declines in non-manufacturing employment were not particularly significant, the largest decreases being 2.0 per cent in quarry-

ing and 1.4 per cent in laundries. Crude petroleum producing firms reported fewer employees and slight declines were also reported in telephone and telegraph, electric-railroad and motor-bus operation, and banks and insurance companies.

*Public Employment.*—There was an increase of more than 200,000 in the number of workers employed at the site of construction projects financed from the Emergency Relief Act of 1935. As of September 15 there were nearly 345,000 workers employed on these projects. Their monthly earnings totalled more than \$15,500,000.

*Private Building Construction.*—Employment in the private building construction

industry continued to expand in September marking the 7th consecutive month in which gains have been reported. Based on information supplied by 8,670 contractors employing 65,064 workers in September there was a gain of 4.5 per cent in employment from August to September and an increase of 8.2 per cent in payrolls. The reports covered employees engaged in erecting, altering and repairing buildings, and do not include projects financed by the Public Works Administration or Reconstruction Finance Corporation funds, regular appropriations of Federal, State and local governments, or by loans insured by the Federal Housing Administration.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wage Laws require the payment of higher wages than those set out

above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wage scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924 provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district; or fair and reasonable hours. These "A" conditions, in so far as wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the LABOUR GAZETTE of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the workpeople employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all

of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest, to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF MARINE

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Construction of repairs to Cold Storage and Fish House, Quebec Harbour, P.Q. Name of contractor, Mr. Emile Dube, Quebec, P.Q. Date of contract, October 31, 1935. Amount of contract, \$33,621.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons.....	\$0 80	8
Cement finishers.....	0 55	8
Plasterers.....	0 70	8
Sheet metal workers.....	0 65	8
Hoist operator—gasoline.....	0 50	8
Hoist operator—steam.....	0 60	8
Roofers, felt and gravel.....	0 45	8
Roofers, sheet metal.....	0 65	8
Riggers.....	0 50	8
Blacksmiths.....	0 55	8
Electricians.....	0 65	8
Painters.....	0 55	8
Plumbers and steamfitters.....	0 65	8
Labourers.....	0 40	8
Driver, horse and cart.....	0 55	8
Driver, team and wagon.....	0 70	8
Drivers.....	0 40	8
Motor truck driver and truck.....	1 45	8
Motor truck driver.....	0 45	8
Carpenters.....	0 60	8
Structural iron workers.....	0 65	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Supply and installation of a Sprinkler System in the Film Vaults of the Photographic Laboratory, Ottawa Air Station, Ottawa, Ont. Name of contractors, Automatic Sprinkler Company of Canada, Ltd., Montreal, P.Q. Date of contract, October 17, 1935. Amount of contract, \$3,490.00. A fair wages schedule was inserted in the contract as follows:—

#### DEPARTMENT OF FINANCE

##### *Contracts in Group "B" (Manufacture of Equipment, Supplies, etc.)*

During the month of October, 1935, the Department of Finance awarded the following contracts covering the equipment requirements of the Canadian Pacific Railway Company, pursuant to The Supplementary Public Works Construction Act 1935, all of which were subject to the "B" Labour Conditions above referred to:—

(a) Contract for construction and delivery of five 4-4-4 type Locomotives, awarded on October 30th to the Montreal Locomotive Works, Ltd., Montreal, P.Q.

(b) Contract for the construction and delivery of one 500-600 B.H.P. Diesel Electric Switching Locomotive, awarded on October 30th to Stone Franklin of Canada, Ltd.

(c) Contract for the construction and delivery of four Steel Baggage and Buffet Coach Frames, awarded on October 30th to National Steel Car Corporation, Ltd., Hamilton, Ont.

(d) Contract for the construction and delivery of four Steel Mail and Express Cars, awarded on October 30th to National Steel Car Corporation, Ltd., Hamilton, Ont.

(e) Contract for construction and delivery of eight steel coach frames, awarded on October 30th to National Steel Car Corporation, Ltd., Hamilton, Ont.

The Alberta Gazette of October announces the appointment of Dr. Victor Wallace Wright as chairman of the Workmen's Compensation Board. Dr. Wright replaces Mr. Alex Ross who resigned recently from the Board Chairmanship.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Wood Products

FORT FRANCES, ONTARIO.—A SAW MILL PROPRIETOR AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 2558 (SAWMILL WORKERS).

Agreement reached following the strike reported on page 1002 of this issue. Agreement to be in effect from October 9, 1935, to May 1, 1936, unless other arrangements are made just prior to the opening of the sawmill in the spring of 1936. Negotiations for a new agreement to commence 15 days before May 1, 1936.

The jurisdiction of the union includes the sawmills, sorting chain, planing mill, lath yard, lumber yard, barn, sorting cap, boom, machine and blacksmith shops.

No discrimination to be shown employees on account of membership in this union.

Hours: 8 per day, 48 per week. Should exemptions be considered from the 8-hour day, the union will confer with the management and Government representatives, and the union agrees to abide by any decision so made.

Overtime: time and one quarter.

Minimum wages: 30 cents per hour.

Any grievances are to be reported to the management for adjustment.

### Manufacturing: Printing and Publishing

EDMONTON, ALBERTA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS UNION, LOCAL NO. 129.

Agreement to be in effect from May 27, 1935, to May 26, 1937, except for the wage scale which may be opened up by either party on 30 days' notice before May 26, 1936. If negotiations for a new agreement to follow this one fail, the matter will be referred to arbitration.

This agreement is similar to the one previously in effect which was summarized in the LABOUR GAZETTE, June, 1933, page 649 with the following exceptions:

Hours: not to exceed 6 hours on Saturday, although the weekly hours remain at 45 per week.

Extra pay for being called back to work is 50 cents.

Wage rates are unchanged at 85 cents per hour for journeymen stereotypers for day work.

### Manufacturing: Fur and Leather Products

TORONTO, ONTARIO.—THE SHOE AND SLIPPER MANUFACTURERS' PROTECTIVE ASSOCIATION AND THE SHOE AND LEATHER WORKERS' INDUSTRIAL UNION OF CANADA, LOCAL NO. 1.

Agreement reached following the strike reported on page 1000 of this issue. Agreement to be in effect from October, 1935, to August 15, 1936. Negotiations for a new agreement to commence 30 days before expiration date.

Only union members to be employed, if available, and any others employed are to join the union. The shop chairman and shop committee as well as union officers to represent the workers in all negotiations with the Association or firm.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: after January 1, 1936, all overtime to be paid at time and one-quarter.

Minimum wages in effect after January 1, 1936: in all factories producing shoes below \$2, skilled workers 55 cents per hour semi-skilled workers 40 cents; female workers, \$12.50 per week; young unskilled male workers if employed in the place of female help must receive the minimum wage as provided by the Minimum Wage Law for female workers.

Minor adjustments in wages of under-paid workers to be made immediately on the signing of the agreement. The wages of workers receiving more than the minimum rates not to be reduced.

Not more than 10 per cent of the employees of any firm may be apprentices.

Provision is made for the division of work during slack periods.

Provision is also made for the adjustment of disputes through the union and employers, and if necessary through an impartial board. No strike or lockout pending negotiations.

The agreement is subject to the introduction of any improved working conditions, the result of new legislation.

Should the union sign any agreements with any other firm doing similar work, which provide for a lower standard of conditions, such conditions will also apply to firms covered by this agreement.

### Manufacturing: Textiles and Clothing

WINNIPEG, MANITOBA.—WINNIPEG LADIES' GARMENT MANUFACTURING ASSOCIATION AND THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION.

The agreement covers the manufacture of cloaks, suits and garments.

Agreement to be in effect from October 3, 1935 to June 15, 1937.

Only union members to be employed. A shop chairman to be elected in each shop to deal with the manufacturer. The shop chairman

may collect dues. An authorized union representative to have access to the manufacturers to negotiate for employees. No discrimination to be shown by manufacturers against any union member on account of union activity or any previous strike activity. No discrimination to be shown by the union against any manufacturer on account of past attitude to union matters.

Hours: until June 15, 1936, 44 per week; during the next year, 42 per week.

Wages of employees working at the time the agreement came into effect to be raised as follows: from October 3, 1935 to June 15, 1936, those receiving \$10 per week and less an increase of 15 per cent, those receiving over \$10 and less than \$20 an increase of 10 per cent, those receiving over \$20 and \$30 or less an increase of \$1 per week. During the next year, adjustment in wages to be agreed upon between the union and the manufacturer. All employment to be on a weekly basis. Wages of any new employees to be agreed upon between the union and the manufacturer.

Overtime: straight time for the first eight hours overtime in any week, and time and one-quarter for any additional overtime.

No further apprentices to be employed until all unemployed members of the union are absorbed in the industry.

During the slack season, work to be divided as equally as possible in the shop.

No individual contracts to be made between a manufacturer and an employee.

Any dispute which cannot be settled between the employer and the union to be referred to a chairman who is to be appointed jointly by the parties to act during the existence of the agreement. The decision of this chairman to be final and binding. For any violation of the agreement, the chairman may impose a fine. The manufacturers will not directly or indirectly give work to a contractor or sub-manufacturer nor purchase any cloaks or suits from a manufacturer against whom the union is conducting a strike.

### Service: Recreational

VANCOUVER AND OTHER CENTRES IN BRITISH COLUMBIA.—A CERTAIN FILM CORPORATION AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES, LOCAL NO. 348 (PROJECTIONISTS).

Agreement to be in effect from September 1, 1935 to September 1, 1937.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, November, 1934, page 1063, with wage rates (which in most cases show increases of from 8 to 11 per cent) as in the following paragraph.

The figure for wages is the amount paid per week to all the operators in each theatre, the number of operators reported being shown in brackets. In three theatres \$208 (4 men), in one theatre \$202 (4 men), in another theatre \$160 (4 men), in another theatre \$101 (2 men), in suburban theatres \$75.80 (2 men), in all "Mountain" houses including Chilliwack, Nanaimo and Prince Rupert \$63 (2 men).

Overtime: \$1.45 per man per hour in three theatres, \$1.40 per man per hour in all other theatres except "Mountain" houses where overtime rate is \$1.20 per man per hour.

### Quebec Collective Labour Agreements Extension Act

The following agreements and amendments to agreements in the Province of Quebec have recently been made obligatory by Orders in Council and the terms so made obligatory are summarized in the article beginning on page 1063 of this issue:—

Barbers, Rouyn and Noranda.  
Printing Trades, Quebec.  
Furniture Workers, Province of Quebec.  
Men's, Boys', Girls' and Children's Clothing, Province of Quebec (Amendment).  
Barbers and Hairdressers, Three Rivers (Amendment).  
Glove Makers, Province of Quebec (Amendment).  
Building Trades, Montreal (Amendment).  
Barbers and Hairdressers, Shawinigan and Grand'Mère (Amendment).  
Bakers, Quebec (Amendment).

### Industrial Standards Act of Ontario

The following schedule has been made binding by Order in Council and the terms summarized in this issue in the article beginning on page 1065.

Electricians, Windsor.

The New Brunswick Gazette of October 9, announces the proclamation of the Act to provide old age pensions, effective from September 20, 1935. The Act was passed in 1930 and was to come into effect upon proclamation. (LABOUR GAZETTE, October, 1930, page 1153).

Canada's coal production in September totalled 1,123,453 tons as compared with 975,932 tons in August and 1,305,798 tons in September, 1934. The September, 1930-1934 average output was 1,129,305 tons. Production during September, 1935, consisted of 799,416 tons of bituminous coal, 50,539 tons of sub-bituminous coal and 273,498 tons of lignite coal.

Imports of coal into Canada in September were recorded at 1,427,277 tons; a year ago, 1,593,859 tons were imported, while the average for the month during the past five years was 1,581,662 tons. The September anthracite coal importations were drawn from the following sources; Great Britain, 209,362 tons; the United States, 122,316 tons; Germany, 32,067 tons; and French Indo-China, 8,727 tons. The Canadian imports of bituminous coal included 996,398 tons from the United States, 57,865 tons from Great Britain, 55 tons from Esthonia and 1 ton from Alaska. Four hundred and eighty-six tons of lignite coal were imported from the United States during September.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the same industry or business and in the same district, by Orders in Council, of three agreements which are summarized below and amendments to six other Orders in Council which are also noted below. Notices of application for changes in agreements already in effect under Orders in Council have appeared in the *Quebec Official Gazette* as follows: barbers at Shawinigan Falls and Grand'Mère in the issue of October 5; barbers at Quebec, shoe workers throughout the Province, building trades at Drummondville, plumbers and electricians at Quebec and ornamental iron and bronze workers at Quebec in the issue of October 19; barbers at Montreal, painters at Quebec, and bakers at Three Rivers in the issue of October 26; bakers at Montreal in the issue of November 2. A correction to the application for a change in the Order in Council for barbers at Montreal was made in the issue of November 2. Notices of application for the extension of an agreement affecting barbers and hairdressers at St. Johns and Iberville appeared in the issue of October 5, and for the extension of an agreement affecting barbers and hairdressers at Valleyfield in the issue of October 19.

The text of the Collective Labour Agreement Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be

passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**BARBERS, ROUYN AND NORANDA.**—An Order in Council, approved October 3 and published in the *Quebec Official Gazette* October 5, makes obligatory the terms of an agreement between L'Union des Maîtres-Barbiers de Rouyn et Noranda (The Master Barbers' Union of Rouyn and Noranda) and Le Syndicat des Compagnons-Barbiers de Rouyn et Noranda (The Journeymen Barbers' Union of Rouyn and Noranda).

The territorial jurisdiction comprises the towns of Rouyn and Noranda and the township of Rouyn.

The agreement is in effect from October 5, 1935, to October 4, 1938 and after that date until a new agreement comes into force. With the consent of both parties, the Joint Committee may however make any amendment in the interest of the trade.

Hours: 57 per week.

Minimum wage rates for journeymen barbers: from May 1 to October 31, \$15 per week plus a commission of 50 per cent on receipts over \$25 per week taken in by the journeyman during the week; from November 1 to April 30, \$12 per week plus a commission of 65 per cent on all receipts over \$20. Minimum daily rates are also specified for extra employees and minimum piece rates for work done by the job. If employer boards an employee, not more than \$2 per week for lodging or \$4 per week for board may be charged. No object of any value which might serve to lower the minimum rates is to be given to a customer. A master barber or hairdresser may not lease one or more chairs to a journeyman barber or male or female hairdresser or to another master barber, male or female hairdresser. Journeymen, who due to advanced age or infirmity cannot give ordinary service, may have their case referred

to the Joint Committee who may revise the wage scale for such worker.

Wages for female hairdressers to be in accordance with the Minimum Wage Board regulation.

The Joint Committee to be comprised of three master barbers, including one from Noranda, and of two journeymen, this Committee to be chosen by the interested parties at a general meeting.

No strike or lockout to be declared unless all conciliation measures have been exhausted.

**PRINTING TRADES, QUEBEC.**—An Order in Council, approved October 3, and published in the *Quebec Official Gazette* October 5, makes obligatory the terms of an agreement (as amended following objections) between L'Association des Maîtres—Imprimeurs et Editeurs de la cité et du district de Québec, Inc. (The Association of Master Printers and Publishers of the city and district of Quebec) and L'Union Typographique de Québec No. 302 (The Typographical Union of Québec No. 302), L'Union des Pressiers et Clicheurs de Québec No. 152 (The Union of Pressmen and Stereotypers of Québec No. 152), L'Union Catholique des Imprimeurs et Relieurs de Québec (The Catholic Union of Printers and Bookbinders of Québec), International Brotherhood of Bookbinders (Québec No. 152).

The territorial jurisdiction includes the judicial districts of Québec, Beauce and Montmagny.

The agreement is to be in effect from October 5, 1935, to August 15, 1936 and for another year unless cancelled by either party.

The agreement is similar to the one previously in force under Order in Council which was published in the *LABOUR GAZETTE*, October, 1934, page 911, with correction in the issue of November, 1934, page 1005, with the following changes:

A journeyman's certificate of competency may now be obtained from a labour union which is a party to the agreement or from the Board of Examiners approved by the Joint Committee.

Minor changes are made in the calculation of the number of apprentices allowed.

For work on non-automatic platen presses, the proportion allowed is three apprentices per journeyman. The wage rates for journeymen pressmen on these presses is \$18 per week for day work and \$20 for night work.

(The wage rates for all other journeymen typographers, pressmen, stereotypers or bookbinders are unchanged at \$25 per week for day work and \$27 for night work.)

Women workers are governed by this agreement, but must in no case be paid lower wage rates than those specified by the Minimum Wage Board.

The printing service of a manufacturing establishment not belonging to the printing industry proper, is governed by this Order with the exception of the clauses relating to the proportion between apprentices and journeymen.

**FURNITURE WORKERS, PROVINCE OF QUEBEC.**—An Order in Council, approved October 31, and published in the *Quebec Official Gazette* November 2, makes obligatory the terms of

an agreement (as amended following objections) between L'Association des Manufacturiers de Meubles de la Province de Québec (The Association of Furniture Manufacturers of the Province of Québec) representing six named manufacturers, and Le Syndicat Catholique National des Travailleurs de Meubles de Victoriaville, Que. (The National Catholic Union of Furniture Workers of Victoriaville, Québec) and L'Association des Employés de J. W. Kilgour and Brothers Limited de Beauharnois, Que. (The Association of Employees of J. W. Kilgour and Brothers, Limited, of Beauharnois, Québec).

The territorial jurisdiction comprises the Province of Québec and is divided into three zones: Zone I is the Island of Montreal, Zone II is the province with the exceptions of Zones I and III; Zone III is the County of Chicoutimi and the municipalities whose population is less than 3,000, but not including establishments which employ more than 50 workers.

The industrial jurisdiction comprises the manufacture of specified dining room furniture, bedroom furniture, living room furniture, kitchen and breakfast room furniture, office furniture, school furniture, restaurant and tavern room furniture, lawn and porch chairs and tables made of wood, and other specified wooden articles.

The agreement is in effect from November 2, 1935 until August 31, 1936.

Minimum wages per hour for labourers over 21 years: 25 cents per hour in Zone I, 22 cents in Zone II and 20 cents in Zone III; but higher wages being paid workmen at the time the agreement was made must not be reduced during the existence of the agreement. Wages for boys of 16 years and over are: 12 cents per hour during first year, 14 cents second year, 16 cents third year, 18 cents fourth year and 20 cents fifth year. Minimum wages for female employees: 16 cents per hour. The number of employees under 21 years of age must never exceed 25 per cent of the whole staff in establishments employing an average of 50 workmen, or 50 per cent of the whole staff in establishments employing less than 50 workmen. Workmen suffering from any infirmity or whose working capacity is reduced must receive a wage of at least 80 per cent of the rate fixed for men over 21 years, but the number of such employees must never exceed 5 per cent of the whole staff.

A Joint Committee to be formed and to be charged with enforcement of the agreement under the provision of the Act. This committee to be formed of four representatives of the association of employees and four representatives of employers.

**MEN'S, BOYS', GIRLS' AND CHILDREN'S CLOTHING, PROVINCE OF QUEBEC.**—An Order in Council, approved October 3 and published in the *Quebec Official Gazette* October 5 amends the original Order in Council for this industry (*LABOUR GAZETTE*, March, page 238, with amendments in *LABOUR GAZETTE*, April, page 323, and August, page 733) by including girls' clothing up to the size for the age of 14 years in the section dealing with wage rates and

hours in children's clothing manufacturing (LABOUR GAZETTE, August, page 733), providing that such girls' clothing is made entirely by the same method of production as clothing for the two sexes, is not made by an employer principally engaged in the women's cloak, suit and skirt industry and provided such girls' clothing is not made directly or indirectly for the purpose of evading the agreement in the cloak and suit industry.

**BARBERS AND HAIRDRESSERS, THREE RIVERS.**—An Order in Council approved October 10 and published in the *Quebec Official Gazette* October 19; amends the original Order in Council (LABOUR GAZETTE, July, page 631) by changing one of the piece rates.

**GLOVE MAKERS, PROVINCE OF QUEBEC.**—An Order in Council, approved October 17 and published in the *Quebec Official Gazette* October 19, amends the original Order in Council for this industry (LABOUR GAZETTE, May, page 421) by the addition of piece rates for certain further operations.

**BUILDING TRADES, MONTREAL.**—An Order in Council, approved October 25 and published in the *Quebec Official Gazette* October 26 amends the Order in Council for this industry (LABOUR GAZETTE, May, page 424, with changes noted in June, page 582, and September, page 869) by the inclusion of structural iron

work. This includes fabrication work of any description done in the field, and such work is to be done under the following conditions:

Hours: 8 per day, 40 per week.

Overtime: time and one-half; Sundays and holidays, double time.

Wages per hour: Steel erectors on structural and plate and tank works, including assemblers, riveting gangs (heaters, stickers-in, holders-on and riveters) burners, caulkers, welders, signallers and drillers, locomotive crane and derrick car operators, hoist runners, 65 cents; compressor men 60 cents; men employed in swinging derricks, plumbing (lining up) bolting, structural steel painting and bull gang, 50 cents.

**BARBERS AND HAIRDRESSERS, SHAWINIGAN AND GRANDMÈRE.**—An Order in Council approved October 31 and published in the *Quebec Official Gazette*, November 2, amends the original Order in Council for these trades (LABOUR GAZETTE, August, page 732) by including in the territorial jurisdiction, in addition to the town of the Shawinigan and Grandmère, the territory lying five miles outside the limits of these towns, as well.

**BAKERS, QUEBEC.**—An Order in Council, approved October 31 and published in the *Quebec Official Gazette*, November 2, amends the Order in Council for this industry (LABOUR GAZETTE, February, page 148 and June, page 531) by the addition of one bakery to the names of the firms who were parties to the agreement.

## INDUSTRIAL STANDARDS ACT OF ONTARIO

### Agreements Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve

months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July issue of the LABOUR GAZETTE, summaries are given in this article of the schedules which have thus been approved.

**ELECTRICIANS, WINDSOR.**—An Order in Council, dated October 17, and published in the *Ontario Gazette*, October 19, makes binding a schedule of wages and hours of labour on all those engaged in the electrical repair and construction industry in a zone which includes the City of Windsor and the surrounding district which is defined in the Order in Council. The schedule does not apply to electricians working on assembling, testing, inspecting, re-building and repairing of any electrical

motors or household appliances when done in licensed electrical repair shops.

The schedule is in effect from October 29, 1935, until October 3, 1936.

Hours: 8 per day, 40 per week. When two or three shifts per day are worked and when the overtime shifts equal at least 66⅔ per cent of the regular shift, 8 hours pay will be given for 7 hours' work. No work on Saturdays, Sundays or holidays except in emergencies.

Overtime and all work on Saturday afternoons, Sundays and holidays, double time.

Emergency work on Saturday morning may be done at straight time.

Wages for journeymen electricians: \$1 per hour. All work contracted for and accepted prior to October 3, 1935, of which due notice has been given to the Board on or before November 5, 1935, may be completed at a rate to be approved by the Board. The Board may set a lower wage rate for aged or handicapped workers.

Apprentices to be governed by the Ontario Apprenticeship Act. One apprentice to be allowed to every three journeymen in the shop.

## AGREEMENTS RESPECTING WAGES AND WORKING CONDITIONS IN COAL MINES IN CANADA

During September and October a number of coal mining operators in the district about Drumheller, Alberta, signed amendments to previous agreements with the United Mine Workers of America, District 18, (LABOUR GAZETTE, October, 1935, p. 888) following a report by a Board of Conciliation and Arbitration under the Industrial Disputes Investigation Act (LABOUR GAZETTE, September, 1935, p. 804). The Board had recommended a five per cent increase in wages, whereas the miners had proposed the restoration of the 1932 wage scale with an increase of twelve and one-half per cent. The wage scale had been reduced in 1933 by twelve and one-half per cent for contract miners and by ten per cent for men on day wages (LABOUR GAZETTE, May, 1933, p. 549). The new agreements are to be in effect until terminated by one month's notice given prior to March 31 in any year. A strike occurred in three of the mines involved in the dispute dealt with by the Board, commencing on September 4, but the operator of one mine agreed to the increase by September 13 and that of the others by October 4. A number of other mine operators in the district, not parties to the dispute before the Board, signed similar agreements from time to time so that the new wage scale has been adopted generally throughout the district. This scale provides for surface labourers a rate of \$4.20 per day, for underground labourers \$4.41 and a minimum day rate for miners of \$5.25, as compared with \$4.00, \$4.20 and \$5.00 in effect since April, 1933.

During September wage rates in coal mines in the neighbouring district of East Coulee were increased by five per cent.

In the Edmonton district the United Mine Workers of America, District 18, had applied for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, the operators having refused an increase in wages proposed by the miners when the agreement with the union, in effect since 1933, expired on March 31, 1935. As a result

of conferences with the western representative of the Department from time to time it was agreed in July that further conferences would be held when the Board dealing with the dispute in the Drumheller district had made its report (LABOUR GAZETTE, August, 1935, p. 719). During September as a result of such conferences an agreement was reached, to be in effect from October 15, 1935, to March 31, 1937, providing for a five per cent increase in wages. The rate for surface labourers is \$3.20 per day, underground labourers \$3.36, and the minimum day rate for miners of \$4.20, as compared with \$3.13, \$3.49 and \$4.00 respectively since 1933.

In the coal mining districts in southern and western Alberta and in south eastern British Columbia, where bituminous or steam coal chiefly is mined, the agreements between the operators and the local unions or committees of employees have been renewed from time to time with little change since 1926.

In Vancouver Island, on the coast of British Columbia, the agreements between the operators and committees of employees also have been renewed from time to time with little change since 1925 except that the agreement with one operator was terminated by a dispute involving a cessation of work from August 7 to August 12, 1935. Work was resumed under the same wages and working conditions as before (LABOUR GAZETTE, September, 1935, p. 819). A Board of Conciliation and Investigation has been appointed to deal with a dispute arising out of conditions following the cessation of work.

In British Columbia and Alberta all coal mines are operated on the eight hour day.

In Nova Scotia the agreements between the principal coal mine operators and the United Mine Workers of America were renewed during February and March, until January 31, 1936, with a five per cent increase in wages. The rate for surface and underground labourers was increased from \$3.25 per day to \$3.40 and the minimum rate for miners from

\$3.74 to \$3.93. The hours of work for such surface employees as were not already on the eight hour day were reduced from eight and one-half hours to eight hours per day. For the collieries at Stellarton and Thorburn,

(in receivership), the rate for labourers is \$3.00 and for miners \$3.45. For the collieries at Sydney Mines (also in receivership), a schedule of wages was put into effect providing for a rate of \$3.15 for labourers and \$3.52 for miners.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1935

### Cost of Living, Prices of Staple Articles and Index Number,

THE movement in prices during the month was slightly upward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being higher, the former mainly because of the higher cost of foods though fuel and rent also showed slight increases, and the latter due in large part to higher prices for eggs, butter, non-ferrous metals, raw cotton and raw silk, raw rubber and milled products.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was \$7.93 at the beginning of October as compared with \$7.74 for September; \$7.54 for October, 1934; \$11.68 for October, 1929; \$11.48 for October, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.99 for October, 1914. The greatest advances during the month occurred in the cost of eggs, butter and potatoes with smaller increases in lard, flour, veal, salt pork, cheese and rolled oats. Slight declines were recorded in the cost of beef, mutton, fresh pork, evaporated apples and sugar. In fuel, both anthracite and bituminous coal showed small increases, while wood was practically unchanged. Rent was upward, there being increases in several localities. Including the cost of fuel and rent with that of foods the total budget was \$16.42 at the beginning of October as compared with \$16.16 for September; \$15.96 for October, 1934; \$15.41 for June, 1933 (the low point in recent years); \$21.96 for October, 1929; \$21.14 for October, 1926; \$22.01 for October, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.48 for October, 1914.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 has been upward during the last three months, the increase in this period being 2½ per cent. The index for October was 73.1 as compared with 72.3 for September; 71.4 for October, 1934; 63.5 for February, 1933 (the low point in recent years); 96.8 for October, 1929; 98.1 for October, 1926; 99.6 for October, 1921; 164.3 for May, 1920 (the post war peak); and 66.8 for October, 1914.

In the grouping according to origin five of the eight main groups advanced, the greatest gains occurring in the Vegetable Products group, mainly because of higher prices for flour and milled products, vegetable oils and in vegetables; the Animals and their Products group, because of increases in hides and skins, leather, butter and eggs; and in the Non-Ferrous Metals group, because of increases in antimony, copper and in lead and zinc products. In the grouping according to purpose, consumers' goods and producers' goods both advanced, the former because of increases in foods and the latter because of higher prices for certain manufacturers' materials, chiefly those for the furs and leather goods' industries and for the metal working industries.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October of seventy-one staple foodstuffs, groceries, coal wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemploy-

ment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the *LABOUR GAZETTE* in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1935\*

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

### Retail Prices

Beef prices were again lower, sirloin being down from an average price of 24·6 cents per pound in September to 23·7 cents in October, and rib roast from 18·1 cents per pound to 17·3 cents. Veal advanced from an average price of 12·8 cents per pound to 13·2 cents. Fresh pork was down in many localities, particularly in Ontario, Quebec and British Columbia. The Dominion average price fell from 23·1 cents per pound to 22·7 cents. The price of lard was higher in most cities, the Dominion average being 18 cents per pound as compared with 17·2 cents in September and 14·5 cents in October, 1934.

Prices for eggs were again generally higher, fresh being up in the average from 31·2

(Continued on page 1076)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

\*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 1068)

cents per dozen to 35.8 cents, and cooking from 26.4 cents per dozen to 30.1 cents. Milk was fractionally higher at 10.2 cents per quart, increases being reported from several cities in the province of Quebec. Butter prices were seasonally higher in most cities, the average price for dairy being up from 21.8 cents per pound in September to 24.5 cents in October, and for creamery from 25.4 cents per pound to 27.1 cents. Cheese averaged 19.9 cents per pound in October and 19.6 cents in September. The Dominion average price for bread has been unchanged at 5.9 cents per pound since April although an upward tendency was noted in several localities in October. Flour was fractionally higher at 3.4 cents per pound. Onions have declined steadily since July when the average price was 7.6 cents per pound to 3.5 cents in October. Potatoes averaged substantially higher in price in Ontario and Quebec, reflecting the smaller yield for 1935, but were lower in other provinces. The Dominion average price was \$1.10 per ninety pounds as com-

pared with 99 cents in September. Granulated sugar was slightly lower in many cities and the average price was down from 6.4 cents per pound to 6.3 cents. Anthracite coal was up in the average from \$14.40 per ton to \$14.58, seasonal increases being reported from many cities.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$15; Windsor, \$16.50; Charlottetown, \$13.40; Moncton, \$16; Saint John, \$13.50; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$13.25; Montreal, \$14.25; Ottawa, \$16.25; Kingston, \$14.50; Belleville, \$14.50; Peterborough, \$16.50; Oshawa, \$14.75; Toronto, \$14.75; St. Catharines, \$14.50; Hamilton, \$14; Brantford, \$16.75; Galt, \$16.50; Windsor, \$12.50; Sudbury, \$17.50; Cobalt, \$19; Timmins, \$18.50; Port Arthur, \$17; Fort William, \$17; Winnipeg, \$19.50.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The price of wheat averaged slightly higher for October at 90.8 cents per bushel as compared with 90.3 cents in September. The high price for the month was 96 cents reached near the beginning and the low 85 cents toward the end. In coarse grains western oats were down from 36 cents per bushel to 34 cents and barley from 35.8 cents per bushel to 33.9 cents, while flax advanced from \$1.364 per bushel to \$1.412. In milled products flour at Montreal advanced 10 cents per barrel to \$5.80, while rolled oats and oat meal at Toronto were unchanged. Raw sugar at Montreal advanced from \$1.85 per cwt. to \$1.97. The estimated production of raw rubber was considerably lower than consumption and prices advanced considerably, a grade of Ceylon being up at New York from 11.7 cents per pound to 12.9 cents. In live stock, choice steers at Toronto declined from \$6.80 per hundred pounds to \$6.01 and at Winnipeg from \$4.76 per hundred pounds to \$4.44. Hogs also were lower, the price at Toronto for bacon hogs being down

from \$9.38 per hundred pounds to \$8.94 and at Winnipeg from \$8.46 to \$7.92. Calves and lambs were somewhat higher, the price of the former at Toronto being up from \$8.45 per hundred pounds to \$8.56 and of the latter from \$6.88 per hundred pounds to \$7.06. Storage holdings of butter at the beginning of October were slightly higher than the previous month and higher also than October 1, 1934. The average price for creamery prints at Montreal for October was 26.3 cents per pound as compared with 24.7 cents for September and 21.4 cents for October, 1934. The price of eggs was also substantially higher, fresh at Toronto being up from 34.4 cents per dozen in September to 39.4 cents in October. In textiles, raw cotton and raw silk advanced, the former being up at New York from 10.9 cents per pound to 11.3 cents and the latter from \$1.86 per pound to \$2.15. Electrolytic copper at Montreal averaged \$9.54 per hundred pounds in October, \$9.13 in September and \$7.13 in October, 1934.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the October issue of the LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1930=100, was 89.6 for September, a rise of 1.4 per cent for the month. Food and tobacco increased 2.6 per cent due principally to an increase of nearly 7 per cent in the cereals group and to a smaller increase in the "meat, fish and eggs" group. Except for a slight decrease in cotton prices and except for no change in the miscellaneous commodities group, all of the industrial materials and manufactures groups advanced.

The *Statist* index number, on the base 1867-1877=100, was 85.1 at the end of September, an advance of 1.2 per cent for the month. Both foodstuffs and industrial materials advanced and showed higher levels in all groups except animal food and textiles which were lower than for the previous month.

**COST OF LIVING.**—The index number of the Ministry of Labour on the base July 1914=100, was 145 at the beginning of October, an advance of 1.4 per cent for the month. Food

was 2.4 per cent higher for the month due to higher prices for milk, butter and bread and certain other foods. The fuel and light group showed a slight advance.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 102.3 for September, a decrease of 0.1 per cent for the month. Small decreases in prices of agricultural products, colonial products and manufactured goods were partly offset by a slight advance in industrial raw materials and semi-manufactured goods.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 123.4 for September, a decrease of 0.9 per cent for the month. This was due to lower food prices, while other groups advanced slightly except rent which was unchanged.

### Italy

**WHOLESALE PRICES.**—The index number of the Milan Provincial Council of Corporate Economy, on the base 1913=100, was 329.21 for August, an advance of 3.1 per cent for the month. The advance was general, including all of the eight groups.

**COST OF LIVING.**—The national index number of the cost of living in Italy, on the base 1927=100, was 71.63 for August, a decrease of 0.5 per cent for the month.

### United States

**WHOLESALE PRICES.**—Bradstreet's index number (continued by Dun and Bradstreet, Incorporated) which is the sum total of the prices per pound of 96 commodities of common consumption was \$10.1762 at October 1, a rise of 1.7 per cent for the month, showing advances in all groups except livestock and building materials which decreased and chemicals and drugs which were unchanged. The level reached on October is the highest point since October 1, 1930.

*Dun's* index number (continued by Dun and Bradstreet, incorporated) which is based on

the cost *per capita* of a year's supply of commodities in wholesale markets was \$177.514 at October 1, an advance of 3.9 per cent for the month. All of the seven groups contributed to the increase, the greatest change occurring in the breadstuffs group.

**COST OF LIVING.**—The index number of the Department of Labour, Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 139.7 for September, a decrease of 0.7 per cent for the month. Increases were noted in the food, clothing and fuel and light groups, while shelter and sundries were unchanged.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1935

**T**HE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the third quarter of 1935, was 262, there being 95 in July, 82 in August and 85 in September.

The report for the second quarter of 1935, showing 212 fatalities, was given in the *LABOUR GAZETTE*, August, 1935, page 789. In the third quarter of 1934, 260 fatal accidents were recorded (*LABOUR GAZETTE*, November, 1934, page 1075). The supplementary lists of accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contains 11 fatalities for the first half of 1935, and 2 fatalities for 1934.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the *Labour Gazette*. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the third quarter of 1935 were as follows: agriculture, 46; logging, 26; fishing and trapping, 13; mining, non-ferrous smelting and quarrying, 30; manufacturing, 34; construction, 29; electric light and power, 13; transportation and public utilities, 52; trade, 7; service, 12.

Of the mining accidents, 24 were in "metal-liferous mining," 5 in "coal mining," and 1 in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, 2 were in "vegetable foods, drink and tobacco," 2 in "animal foods," 7 in "saw and planing mill products," 1 in "wood products," 5 in "pulp, paper and paper products," 7 in "iron, steel and products," 1 in "non-ferrous metal products," 6 in "non-metallic mineral products," and 3 in "chemical and allied products."

In construction there were 9 fatalities in "building and structures," 1 in "shipbuilding," 17 in "highway and bridge," and 2 in "miscellaneous construction."

In transportation and public utilities, there were 26 fatalities in "steam railways," 2 in "street and electric railways," 15 in "water transportation," 2 in "air transportation," and 7 in "local transportation."

In trade there were 4 fatalities in "wholesale," and 3 in "retail."

Of the fatalities in service, 5 were in "public administration," 1 in "laundering, dyeing and cleaning," 1 in "custom and repair," 4 in "personal, domestic and business," and 1 in "professional establishments."

The most serious accident occurring during the period under review was in water transportation when a motor vessel foundered and sank in a storm, off Judique, Cape Breton, Nova Scotia, on September 22 and five members of the crew, including the captain, perished.

Four fishermen were drowned near Half Moon Bay, British Columbia, July 2, when an explosion occurred while syphoning gasoline into the tanks and their boat was destroyed by fire.

While attempting to remove a public danger at an abandoned magazine at Waverley, Nova Scotia, on July 25, an explosion of nitro-glycerine occurred, causing the deaths of an explosives engineer, a district manager and a works manager of an explosives company.

On July 23, a farmer and labourer were struck by lightning near Acton, Ontario. Two farmer's sons were also killed by lightning near Hanover, Ontario, on August 12.

On July 18 two fishermen were drowned while pulling in nets at Smith's Inlet, British Columbia, and on September 27, two trappers were drowned in Lake Brereton, Manitoba, when their motorboat was swamped in a storm.

Two oil refinery workers lost their lives in a fire following an explosion of oil tanks at Morris, Manitoba, on July 24.

When a train collided with a gasoline laden truck, near Fort William, Ontario, on September 1, an engineer, a fireman and truck driver were killed when caught in the spray of flaming gasoline.

### Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first half of 1935 has been compiled which contains 11 fatalities, of which 1 was in logging, 1 in mining, non-ferrous smelting and quarrying, 3 in manufacturing, 2 in construction, 1 in transportation and public utilities, 2 in trade and 1 in service. One of these accidents occurred in February, 1 in March, 1 in May, and 8 in June.

A further supplementary list of accidents occurring in 1934 has been made. This includes 2 fatalities of which 1 was in manufac-

turing and 1 in transportation and public utilities. One of these accidents occurred in March and 1 in October.

The Superintendent of Education for the Province of Quebec has recently published his report for the school year 1933-34. The report shows that there are 26,848 teachers employed in the province; of these 11,807 are religious teachers and 15,041 are lay teachers. The average salaries for religious teachers in 1932-33 were \$584 for males and \$379 for females; while the average salaries for lay teachers were \$1,792 for males and \$517 for females.

Company unions in the United States existed in 593, or 4 per cent, of the 14,725 establishments which reported to the U.S. Bureau of Labor Statistics in a survey conducted in April, 1935. In 97 of these establishments regular trade unions were also functioning. Of a total of 1,935,556 workers employed in the 14,725 establishments covered, 385,954 workers, or approximately 20 per cent, were employed in establishments which had company unions only, and 144,434, or 7.5 per cent, in establishments dealing with both company unions and trade unions. Almost 15 per cent of the company unions covered in the study were established during the war period, and 64 per cent were established during the period of the N.R.A.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Claim for Wages

A worker employed on sewer construction in Montreal claimed arrears of wages to the amount of \$710.50 for 2,030 hours of work as a cement finisher. While employed he was paid and accepted a rate of 40 cents per hour, which was 35 cents per hour less than the rate set by the wage schedule of the city of Montreal for cement finishers.

He instituted action in the Superior Court for recovery of the difference and the trial judge considered it was sufficiently established that the workman was doing the work of a cement finisher and as such was entitled to a wage of 75 cents per hour, but his right to take action was limited to one year by Art. 2262 of the Civil Code. Accordingly, he gave judgment for only \$77.18.

On appeal to the Court of King's Bench the judgment of the lower court was affirmed by the majority of the court as to the limitation of action, and the appeal was dismissed with costs. Further, the Court considered that the employee was not doing the work of a cement finisher.

*Fournier v. Loranger* (1935) 59, *Rapports Judiciaires de Québec, Cour du banc du roi* 134.

### Workman Without Scope of Compensation Act can claim Damages at Civil Law

The Workmen's Compensation Commission of Quebec refused to entertain the claim of an employee for injuries sustained in the course of employment on the ground that the case was not one of those governed by the Workmen's Compensation Act.

The workman then instituted action against his employer in the Superior Court for \$9,500 damages for injuries which he attributed to the fault and negligence of the defendant, and moved to amend his declaration to the effect that while reserving his right to raise the question of the constitutionality of the Workmen's Compensation Act, if necessary, he had not been able and could not take advantage of the provisions of that statute.

It was contended by the employer that the case was governed solely by the Workmen's Compensation Act and that there was no other recourse in law. The claim of negligence was also denied.

The Superior Court upheld the defendant company.

On appeal to the Court of King's Bench, the judgment of the Superior Court was reversed, the plaintiff's motion being granted, and the defendant's inscription-in-law dismissed with costs.

In giving judgment, Mr. Justice McDougall brought out the points at issue as follows:—

"It is well to recall, at the outset, that the Legislation enacted by the Workmen's Compensation Act is exceptional in character, and was introduced into our system of law, for the first time in 1909, based upon and finding its source in the theory of professional risk. Its provisions were then administered and applied by the ordinary Courts. The original enactment has been frequently amended, the operation of its provisions has been greatly changed since its inception; a Commission has been set up, with exclusive jurisdiction to deal with cases arising thereunder, but the Act still constitutes a distinct derogation from the principles of law of the Code, chiefly in declaring that an accident causing injury to an employee engenders responsibility irrespective of fault.

"Being thus exceptional in character, such enactment must be closely confined within the specific limits laid down by the Legislature and is subject to a strict construction. . . .

"The Commission which examined the plaintiff's case, placed him outside the scope of its application, but they did not, nor could they declare that the plaintiff was destitute of all his civil rights in the circumstances. . . .

"The plaintiff is not claiming the compensation which the Board has denied him. His case is in no sense an appeal from that decision. He claims damages—not the restrictive compensation which the Act contemplates—but the broad general compensation which the law accords upon proof of negligence.

"The Act itself makes it apparent that its provisions are not all inclusive as to the relations which may exist between an employer and his employee. By Section 13 thereof, it is declared that no action will lie before the Courts to recover the compensation contemplated by the Act. But the damages sought by the plaintiff are not the compensation provided by the Act—he has been denied the right to recover same by the only authority competent to so determine. The Act then proceeds to recognize the plaintiff's right as existing beyond and outside the four corners of its provisions, in the second paragraph of Art. 13, which provides specifically that the Act does not deprive a person, who cannot take advantage of its provisions, from the common law resources open to him. Nor can the defendant rely upon Sections 15 or 59 of the Act in bar of the plaintiff's right of action. The Commission has jurisdiction only in respect of cases within the purview

of the Act. Its jurisdiction does not extend into the broader, general field of negligence engendering responsibility outside its particular activities."

*Martel v. Southern Canada Power Company Limited* (1935) 59. *Rapports Judiciaires de Québec, Cour du banc du roi*, 372.

#### Liability for Wages

A manager for a creamery company obtained judgment in the First Division Court against the firm for \$150 salary due and \$25 costs of action. The defendants were the directors of the company, and the plaintiff (the creamery manager) sued under the provisions of the Companies Act, R.S.O. 1927, c. 218, s. 100 (1) which reads:—

"100 (1). The directors of the company shall be jointly and severally liable to the labourers, servants and apprentices thereof for all debts not exceeding one year's wages due for services performed for the company while they are such directors respectively."

Judgment was given in favour of the plaintiff and the defendants appealed.

In the Ontario Court of Appeal the decision of the lower court was reversed. In delivering judgment, Mr. Justice Riddell stated that the statute relied upon "was clearly passed to protect what might be called the labouring class, the class hired by another and working for wages." He further contended that the word "servants" is coupled with the words "labourers" and "apprentices" which indicate classes of persons quite different from managers.

Accordingly, it was held that the liability of directors of a corporation under the Companies Act for wages due to "labourers, servants and apprentices" is inapplicable to the wages of a manager, not being within the category protected by the statute.

The appeal was allowed with costs—\$25 counsel fee as in the lower Court.

*Domanski v. Wilson*, Ontario Court of Appeal (1935) 4, *Dominion Law Reports*, 17.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

CONTARY to the movement indicated in industrial employment on the average during the last fourteen years, there was a further and marked improvement in the general employment situation at the beginning of November, when the 9,482 firms furnishing returns to the Dominion Bureau of Statistics reported 1,012,103 employees, as compared with 997,300 on October 1. Each of these firms ordinarily employs a minimum of 15 workers. Reflecting the advance, the index (based on the average for the calendar year 1926 as 100), increased from 106.1 in the preceding month to 107.7 on the date under review, as compared with 100.2 on November 1, 1934. On that date in the preceding thirteen years, the index was as follows: 1933, 91.3; 1932, 84.7; 1931, 103.0; 1930, 112.9; 1929, 124.6; 1928, 118.9; 1927, 108.8; 1926, 104.0; 1925, 98.3; 1924, 94.1; 1923, 100.0; 1922, 97.0, and 1921, 91.3.

At the beginning of November, 1935, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 13.3, as compared with percentages of 13.0 at the beginning of October, 1935, and 16.2 at the beginning of November, 1934. The percentage for November was based on the reports furnished by 1,777 labour organizations, with a total of 169,839 members.

Reports received from the offices of the Employment Service of Canada during October, 1935, indicated a decline of about 1 per cent in the average daily placements effected, when the figures were compared with those recorded during the corresponding month a year ago. This decline was largely due to fewer placements in logging, as the majority of other industrial divisions registered gains. Vacancies in October, 1935, numbered 35,464, applications 65,300, and placements in regular and casual employment 33,737.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was \$16.54 at the beginning of November as compared with \$16.42 for

October; \$16.03 for November, 1934; \$22.03 for November, 1929; \$21.24 for November, 1926; \$21.60 for November, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.36 for November, 1914. The increase was due mainly to the higher cost of foods, increased prices for eggs, butter, bread and flour more than offsetting decreases in the cost of meats. Fuel showed a slight advance, due chiefly to the higher cost of anthracite coal. In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was lower at 72.7 for November as compared with 73.1 for October. Comparative figures for earlier dates are 71.1 for November, 1934; 95.7 for November, 1929; 97.7 for November, 1926; 98.3 for November, 1921; 164.3 for May 1920 (the post war peak); and 67.2 for November, 1914.

The latest available information reflecting industrial conditions in Canada is given in the table on page 1084. The index of the physical volume of business in October was 107.2 as compared with 101.9 in the preceding month and 95.9 in October, 1934. In the former comparison all of the principal factors except exports and trade employment were higher, the greatest increases occurring in mineral production, electric power output and manufacturing. Comparing October, 1935, with October, 1934, all the principal factors indicate advances. Information available for November shows decreases in wholesale prices, Canadian National earnings and in revenue car loadings as compared with the preceding month but all these items show increases as compared with the figures for November, 1934. There was a substantial gain in building contracts awarded, both as compared with the preceding month and with November, 1934.

During November there were on record thirteen strikes and lockouts, involving 2,133 workers and resulting in a time loss of 24,733 man working days, as compared with nineteen disputes, involving 3,566 workers and a time loss of 35,279 working days in October. The

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending November 30, 1935 and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending November 2, October 5, and September 7, 1935; November 3, October 6, and September 8, 1934.

(7) MacLean's Building Review.

greater part of the time loss during November was due to strikes of longshoremen and other water transport workers at Vancouver and other Pacific ports which began in June. A dispute involving 114 optical workers at Toronto, resulting in a time loss of 1,500 working days was the most important reported during the month. In November, 1934, there were fifteen disputes involving 1,896 workers and a time loss of 17,415 working days, most of the time loss being due to a strike of loggers in northern Ontario and a strike of coal miners at Cumberland, B.C. Of the thirteen disputes in November, seven were recorded as terminated, three resulting in favour of the workers involved while compromise settlements were reached in four cases. The disputes untermiated at the end of the month numbered six and involved approximately 1,500 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Dominion-Provincial Conference at Ottawa**

Covering a wide range of major subjects, the Dominion-Provincial conference convened by the Right Hon. W. L. Mackenzie King, held its sessions at Ottawa

from December 9-13. In active participation were the ministers of the federal departments together with the premiers of the various provinces. The problems upon which the Conference concentrated are those which vitally affect the economic and social structure of the Dominion and, in broad outline, included:

- (1) Questions relating to the procedure to be followed in amending the British North America Act.
- (2) Questions respecting the financial relations between the Dominion and the Provinces and taxation.
- (3) Questions relating to unemployment and relief.
- (4) Questions relating to responsibility for, and co-ordination of, social services.
- (5) Questions relating to mining development and taxation.
- (6) Questions relating to agriculture and marketing.
- (7) Questions relating to tourist traffic development.

The plenary session met in the Railway Committee Room following which the agenda was allocated among panel groups: A report of the proceedings of the conference will be given in the next issue of the LABOUR GAZETTE.

#### **Plenary Session opened by Prime Minister**

In welcoming the provincial premiers and delegates at the opening plenary session, the Dominion Prime Minister, Rt. Hon. W. L. Mackenzie King, expressed appreciation of the co-operation

and readiness of the governments of the provinces to meet the various contingencies which have arisen in the selection of the date of the Conference.

Declaring that the conference was assembling "at a difficult time in our history," the Prime Minister emphasized that "unemployment, taxation, social services, constitutional questions, and other of our problems, are all formidable in themselves. Involving, as each of them does, questions of jurisdiction between the Dominion and the Provinces, they are made all the more baffling and difficult of solution; but upon their solution depends, in large measure, the recovery and happiness of the Canadian people."

He made it clear that "this meeting is a conference to which each government is expected to bring its full share of experience, comment and suggestion, and out of which we hope to secure something lasting and valuable; because it is the result of collective discussion and collective decision."

Continuing, he pointed out that "some of our problems bring us to the foundations of Confederation, and to the bedrock of fundamental principles," and can "be dealt with only in a broad co-operative effort between governments of good-will."

Dealing with the specific objects of the Conference, the Prime Minister stated:

"In the structure of our federal state, each of the Governments represented here this morning is sovereign within the field of its own jurisdiction. No administration could be more disposed to defend that principle than the one at present in office at Ottawa. Yet we should not lose sight of the fact that governments are only institutions created by men to serve human needs. After all, the citizens of the provinces are the citizens of the Dominion. The individuals whose interests the provinces seek to serve are the same individuals for whom the Dominion is concerned. The problem of Dominion-Provincial relations as it presents itself to this conference, in its simplest form can, I believe, be stated in two propositions: first, to mark the boundary of the field where having regard to the change in conditions which have come since the British North America Act was drafted, provincial responsibility should begin and federal responsibility should cease; and, that having been done, to leave the field to whichever government may be responsible; second, where.

for various reasons, clear demarcation is not possible, to reach with respect to each problem, a formula for co-operation between the Dominion and the Provinces.

"It is our hope that we may be able to set up some machinery for the study of the problems on which, in their very nature, no final solution can be reached at the present time. We can confidently expect to reach a satisfactory settlement of the urgent questions which require immediate action. In respect to other questions, for various reasons we cannot attempt to dispose of every aspect of the problems. At the present Conference we can examine the basic principles underlying the questions, and provide machinery for their continued study and treatment. In this manner their final, satisfactory disposition can be insured at subsequent conferences.

"This arrangement of continuity and permanence is necessary, because co-operation between the Dominion and Provinces is too vital a matter to be left entirely for intermittent conferences and to correspondence between Governments."

To the address, the premiers of the provinces each replied, reiterating the Dominion prime minister's conditions of good-will and co-operation as the basis for success. Several of the provincial government leaders stated the particular problems relative to their own provinces, but all recognized the major issues confronting the Dominion as a whole. Those who spoke in reply were: Hon. Mitchell Hepburn, Ontario; Hon. L. A. Taschereau, Quebec; Hon. Angus Macdonald, Nova Scotia; Hon. A. A. Dysart, New Brunswick; Hon. John Bracken, Manitoba; Hon. T. D. Pattullo, British Columbia; Hon. W. M. Lea, Prince Edward Island; Hon. W. J. Patterson, Saskatchewan; Hon. William Aberhart, Alberta.

#### **Conference of Commonwealth Statisticians**

Elsewhere in this issue is published a report of that section of the Conference of Commonwealth Statisticians dealing with labour statistics (an outline of the agenda of the Conference appeared in the *LABOUR GAZETTE* for September, page 797, and October, page 886). The complete report of the Conference, which has been issued recently, includes in its scope the compilation and presentation of statistics on a wide variety of inter-related subjects. The objective of the Conference was to secure as great a degree of uniformity as is practicable at the present time while also indicating the lines along which further progress might be made in the future.

#### **Meeting of Dominion Council of Health**

Under the chairmanship of Dr. R. E. Wodehouse, deputy minister of Pensions and National Health, the Dominion Council of Health held its thirty-first meeting in Ottawa from December 2-4. In attendance were the chief medical officers of the various provinces, together with representatives of labour, agriculture, industry, and of women's organizations, rural and urban. Participating also was Dr. J. G. Fitzgerald, director of the School of Hygiene, Toronto University, who acts as scientific adviser to the Council.

Prominent among the discussions was that led by Dr. C. R. Eskey, director of plague control, United States Public Health Service. During the present year ground squirrels in Montana have been found to be infested with plague, and as the same species of squirrel exists in the contiguous province of Alberta, this country was desirous of obtaining information respecting methods used for control of plague among squirrels in the United States.

Among the other subjects on the agenda were those concerning health hazards from grasshopper poison bait; the use of cyanogen gas as a fumigant; health insurance in British Columbia, Alberta, Saskatchewan, and Manitoba; medical relief; survey of illness among unemployed in Greater Winnipeg; tuberculosis; spray painting; sand blasting operations; and uniform plumbing regulations.

#### **Committee to investigate relief camps**

With respect to the transference of the relief camps from the jurisdiction of the Department of National Defence to the Department of Labour, the Hon. Norman McL. Rogers, Minister of Labour, has announced recently the appointment of a special committee to investigate and report on the problems incidental to their administration. In his announcement, the Minister of Labour emphasized that the major objective of the government was the placing of camp workers in regular employment. The minister's statement was as follows:

"It is the hope of the Government that it may be possible to close the relief camps within the coming year. That, at least, will be the aim in view. In the meantime it will be our object to see that the men in these camps are engaged in useful work under satisfactory conditions and with improved opportunities for re-employment in the normal industrial life of the country.

"In connection with the transfer of relief camps from the Department of National De-

fence to the Department of Labour and in order to bring about a proper co-ordination of relief camp policy with other measures of unemployment relief, I have authorized R. A. Rigg, chief of the Dominion Employment Service, Humphrey Mitchell, of Hamilton, and E. W. Bradwin, president of the Frontier College, to make personal investigations and reports on certain problems raised by the pending transfer of these camps to this department.

"The information thus obtained will be of material assistance in determining the policy of the Department of Labour toward relief camps while they are still in existence, and in effecting a proper relationship between this and other forms of unemployment relief."

### **Municipalities seek increased Dominion assistance**

On November 13, a representative delegation of mayors of Ontario municipalities headed by the Hon. David A. Croll, Ontario Minister of Public

Welfare, discussed the problem of unemployment relief in a conference with Hon. Norman McL. Rogers, the Minister of the Dominion Department of Labour. The delegation, while not making any specific demands upon the Federal government, urged that the Dominion extend increased financial assistance in coping with the relief situation. In assuring the delegation that unemployment relief would form one of the subjects on the agenda of the Dominion-provincial conference (commencing December 9), the Hon. Mr. Rogers also pointed out that the responsibility of the Dominion government was directly to the tax-payers of the country. He emphasized that the municipalities were in a position to appeal to the provinces and that the provinces could turn to the Dominion, but that the Dominion's only recourse was to the taxpayer. "Our only responsibility is to the taxpayer of Canada, and we will do our utmost to interpret that responsibility," stated the Minister of Labour.

### **Farmers' co-operatives business in Canada**

Statistics concerning the membership and business activities of farmers' co-operative societies in Canada are presented annually by the Dominion

Department of Agriculture (Division of Marketing, Agricultural Economics Branch). A review of the volume of business for the year 1933-34 (prepared by A. E. Richards, Agricultural Economist) is given in a bulletin now in course of publication. The available statistics show 690 farmers' co-operative associations actively engaged in business in

1933-34 compared with 686 reporting in 1932-33. These 690 associations have 2,533 branches which combined make a total of 3,223 places of business engaged in the marketing of farm products and the purchase of supplies for farmers. The shareholders and members financially interested numbered 345,024 and patrons reported totalled 379,740. Comparable figures for 1932 were 342,369 and 382,325, respectively. Combined assets totalled \$104,350,702 with plant and equipment valued at \$40,432,859. The total actual investment of member shareholders in capital stock amounted to \$8,722,451 and reserves and surplus totalled \$39,590,050. Sales of farm products for the year under review amounted to \$128,909,035. The sales value of supplies handled totalled \$7,389,034 which combined with other receipts gave a total business of \$136,411,483. Total business reported by the 686 associations for the year previous amounted to \$115,849,894.

Information with respect to consumers' co-operatives in Canada is published from time to time in the LABOUR GAZETTE.

### **The British Immigrant in Canada**

The Social Research Council of McGill University has recently published the second volume in its social

research series under the title "The British Immigrant—His Economic and Social Adjustment in Canada" (Oxford University Press, Toronto). This comprehensive study of the immigration problem as it affects both Great Britain and Canada is the work of Lloyd G. Reynolds, M.A., formerly research assistant at McGill University, and the volume was edited by Carl A. Dawson, Ph.D., professor of sociology, McGill, and Leonard C. Marsh, M.A., director of social research, McGill. Mr. Reynolds has dealt with the subject under four main sections—(1) Selective and distributive factors in British Immigration to Canada; (2) the occupational and residential segregation of British immigrants in Montreal; (3) the adjustment experience of British immigrant groups; and (4) the maladjusted immigrant.

Under the first section, the author discusses the nature of British immigration to Canada, its character and causes, and the expansion of the settled area. In part three, he deals with the process of occupational adjustment (affecting the artisan, the labourer, the domestic and the clerk), immigrant modes of living, and the assimilation process in an artisan area. Part four (the maladjusted immigrant) analyses unemployment and social dependency in immigrant groups, as well as typical "dependency" situations.

In his conclusions (Part Five) the author goes into questions of future immigration policy, and makes specific recommendations with respect to the urban and the rural settler.

**John L. Lewis, heads committee to promote industrial unionism** On November 23, Mr. John L. Lewis, president of the United Mine Workers of America, resigned from the vice-presidency of the American Federation of Labour, a position to which he had been elected at the 1934 (San Francisco) convention of that body.

Following the resignation of Mr. Lewis, the chief officers of eight international unions constituted a Committee for Industrial Organization, its objective and purposes being announced in its first official statement as follows:

"Because of the urgency of organizing the unorganized in the basic industries of America, the Committee for Industrial Organization has been formed. Its purpose is that outlined in the Minority Report of the Resolutions Committee submitted to the convention of the American Federation of Labour in Atlantic City. That is, it has been formed for the purpose of encouraging and promoting the organization of the unorganized workers in mass production and other industries upon an industrial basis. Its aim is to foster recognition and acceptance of collective bargaining in such basic industries; to counsel and advise unorganized and newly organized groups of workers; to bring them under the banner and in affiliation with the American Federation of Labour as industrial organizations."

The Committee for Industrial Organization is headed by John L. Lewis as president, and Chas. P. Howard, president of the International Typographical Union, as secretary. In addition to Mr. Lewis and Mr. Howard, members of the committee selected to direct the work of the new body are: Sidney Hillman, president of the Amalgamated Clothing Workers of America; David Dubinsky, president, International Ladies' Garment Workers' Union; Thomas F. McMahon, president, United Textile Workers of America; Harvey C. Freming, president, International Association of Oil Field, Gas Well and Refinery Workers of America; Max Zaritsky, of the United Hatters, Cap and Millinery Workers' International Union; and Thomas H. Brown, president, International Union of Mine, Mill and Smelter Workers.

Industrial unionism was debated at length at the 1935 (Atlantic City) convention of the

American Federation of Labour, and the move to adopt this form of union organization was defeated on a roll call vote (LABOUR GAZETTE, November, page 1015).

### Family allowances in Europe

References have been made in previous issues of the LABOUR GAZETTE to systems of family allowances in Belgium and France (LABOUR GAZETTE, November, 1930, page 1271, May, 1932, page 542 and November, 1933, page 1099).

The International Labour Office at Geneva has recently published an article by Claire Hoffner who makes a comprehensive survey of the present systems of family allowances in Belgium, France and Italy.

In Belgium there has been a marked extension of the system during the period 1929 to 1933. During those four years the number of undertakings affiliated to the equalization funds increased from 3,852 to 96,497; the number of workers in these undertakings from 581,600 to 1,277,673; the number of children receiving allowances from 331,000 to 885,030; and the total cost from 92,630,000 francs to 249,369,071 francs.

The growth of the system in France during the period 1929 to 1934 (May) is reflected by the following increases: number of affiliated undertakings—from 25,000 to 100,000; number of workers employed in such undertakings—from 1,740,000 to 3,400,000; total cost of allowances—from 292,000,000 francs to 565,000,000 francs.

In Italy, where the system has been recently established, the Governing Body of the National Family Allowance Fund fixed January 15, 1935, as the date from which family allowances should be paid. It is estimated that the number of workers who will benefit by the allowances will vary between 360,000 and 540,000 while the number of children for whom allowances will be due will be between 500,000 and 740,000.

Family allowances have been advocated in Canada by Rev. Father J. Lebel, S.J. (LABOUR GAZETTE, June, 1928, page 598 and June, 1929, page 605.) The subject was among the social problems investigated by the Quebec Social Insurance Commission appointed by the Legislature in 1930 (LABOUR GAZETTE, November, 1930, page 1236).

The commission reported broadly on the whole field of social insurance and its recommendations with respect to family allowances were published in the LABOUR GAZETTE of August, 1932, page 861.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**T**WO applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour at the close of November as follows:—

(1) From certain employees of the Dominion Transport Company, Limited, at Toronto, Ontario, being members of Local Union No. 670, International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers. The dispute relates to the employees' request for increased wages, shorter hours and improved working conditions, 60 men being directly affected and 20 indirectly.

(2) From the Lakeside Coals, Limited, concerning a dispute with certain of its employees, 80 in number, at Robb, Alberta, being members of the United Mine Workers of America. The employees' request for a wage increase of 5 per cent is stated to be the cause of the dispute.

Advice was received in the Department of Labour early in December that agreements had been reached between the Canadian National Telegraphs and the Commercial Telegraphers' Union of North America, System Division No. 43, disposing of the matters in dispute which had been the subject of inquiry by a Board of Conciliation and Investigation during August and September of the present year. The text of the findings of the Conciliation Board appeared in the October issue

of the *LABOUR GAZETTE* at page 889. The settlement, which is the result of direct negotiations between the parties, provides for the inclusion of Radio and Repeater Attendants in the Schedule of Rules and Wages for Telegraphers, Clerks and Installers, dated October 1, 1927, and for the re-establishment of seven offices on a commission basis from January 1, 1936.

Early in September an informal request by letter was received from Local Unit No. 29, Mine Workers' Union of Canada, for the establishment of a Board of Conciliation and Investigation to deal with a dispute concerning wages and working conditions involving certain coal operators in the East Coulee district in Alberta, namely, the Empire Collieries, Limited, the Atlas Coal Company, Limited, the Murray Collieries, Limited, and the Aetna Coal Company. A Conciliation Officer of the Department proceeded to Alberta and arranged conferences between the interested parties. The Department was subsequently advised that agreements were reached on September 18 between the Murray Collieries, Limited, and the Atlas Coal Company, Limited, and their employees, providing for a wage increase of 5 per cent in conformity with the wage increase in the Drumheller coal field. It has been ascertained that the same wage rates have been made effective by the other coal mining companies concerned in the East Coulee district.

### Order Governing Lumbering Industry in New Brunswick

The Forest Operations Commission has recently gazetted the following wage scale for the lumbering industry throughout the province:—

"For cutting, yarding and hauling, the average rate of wages paid by the employer to his employees shall be not less than Twenty-seven Dollars (\$27) per month and board net, or its equivalent in the case of piece work, provided, however, that no employer who at the present time owing to favourable conditions is paying his employees a greater sum on the average than Twenty-seven Dollars (\$27) per month and board net or its equivalent in the case of piece work, shall be allowed to reduce such wages or earnings of any of his employees except on showing good cause to the Commission; this wage scale to be effective as of October first, 1935."

During November there were 5,162 accidents reported to The Workmen's Compensation Board, as compared with 5,596 during

October, and 4,849 during November a year ago.

The fatal cases numbered 21, as against 28 in October, and 30 last November.

The benefits awarded amounted to \$385,435.38, of which \$297,103.46 was for compensation and \$88,331.92 for medical aid. In October \$517,878.61 was awarded in benefits, and \$412,309.59 during last November.

Regulations pertaining to food and drink were published in the *Alberta Gazette* of November 15, 1935. These orders cancel those previously issued covering these items. The new regulations have sections relating to food handlers; adulterated or impure food offered for sale; inspection of food supplies; onus of proof; food stuffs displayed for sale; ice-cream vendors, soda fountains; beer parlours and food vendors generally; and facilities for cleansing utensils used in the serving of food or drink.

## STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1935

THE following table shows the number of disputes, workers involved and time loss for November, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Nov., 1935.....	12	2,133	24,733
*Oct., 1935.....	19	3,566	35,279
Nov., 1934.....	15	1,896	17,415

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for November was substantially lower than in October, but owing to the continuance of the disputes of longshoremen and other water transport workers at Vancouver and other Pacific ports, the figures for numbers of workers involved and time loss incurred showed a less marked decline. The only dispute of importance commencing during November involved upwards of one hundred optical workers at Toronto, Ont., and caused 1,500 days' time loss. While there was also a decrease in the number of strikes as compared with November last year, there was an increase in the number of workers involved and the time loss incurred, due to the disputes of water transport workers mentioned above. The only important disputes during November, 1934, were those of five hundred loggers in the Sault Ste. Marie district of Ontario which resulted in a time loss of 5,000 working days and coal miners at Cumberland, B.C., where approximately four hundred workers lost 6,000 working days.

Five disputes, involving 1,513 workers, were carried over from October (a sixth dispute, namely, that involving longshoremen, Powell

River, B.C., recorded as unterminated in the November issue of the LABOUR GAZETTE, having been declared by the Royal Commissioner appointed to investigate the matter not to have been a strike or lockout) and eight disputes commenced during November. Of these thirteen disputes, seven terminated during the month, three resulting in favour of the workers involved while compromise settlements were reached in four cases. At the end of November, therefore, there were on record six disputes recorded as strikes or lockouts, namely: custom tailors, Toronto, Ont., longshoremen, Vancouver, B.C., water transport workers, Vancouver, Victoria, New Westminster, Chemainus, etc., B.C., shoe factory workers, Valley Junction, P.Q., optical workers, Toronto, Ont., and hotel employees, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer; motion picture projectionists, Winnipeg, Man., September 1, 1935, two employers; and composers, Winnipeg, Man., April 7, 1935, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

In connection with the dispute involving pulpwood cutters in the district around Chicoutimi, P.Q., noted in the November LABOUR GAZETTE as being reported in the press about the middle of October, later information indicates that no strike or lockout occurred.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**CAP FACTORY WORKERS, WINNIPEG, MAN.**—This dispute, which commenced on October 21 owing to a disagreement between the employer and the United Hatters', Cap and Millinery Workers' International Union as to the application of the wage scale in an agreement signed during the previous month and as to the employment of two workers who re-

fused to join the union, was settled as a result of conciliation by the provincial Deputy Minister of Labour and work was resumed on November 4. A ten per cent increase in wages was given to certain workers and the employees complained of are understood to have joined the union in accordance with the "closed shop" provision in the agreement, which is summarized elsewhere in this issue.

**MOULDERS, OSHAWA, ONT.**—As stated in the November issue of the *LABOUR GAZETTE*, this dispute was settled early in November, the employee dismissed for alleged misconduct being reinstated on making an apology. Work was resumed on November 5.

**LONGSHOREMEN, POWELL RIVER, B.C.**—This dispute, included in the record of strikes and lockouts since May 17, 1935, was declared not to be a strike or a lockout in the report of the Royal Commissioner, *LABOUR GAZETTE*, November, 1935, pp. 990, 991 and 994. The Commissioner found that only two men ceased work and three others did not proceed to work, and that no demands on the company had been made by the newly organized Powell River District Waterfront Workers' Association, or any of its fifty-two members who had been given work from time to time in loading ships during the period of unemployment since 1931 instead of having the work done by the mill employees as before. During November two men were sentenced to three months imprisonment, being convicted on charges of unlawful assembly at Powell River on June 28. Four others convicted of unlawful assembly were released on suspended sentence. The men convicted were reported to have led fifty men in attempting to reach the waterfront in connection with picketing and clashed with the police.

**LONGSHOREMEN, VANCOUVER, B.C.**—Negotiations for the settlement of the dispute at the end of October not being successful, the strike continued throughout the month but early in December it was reported that the union had called it off for December 9. During November a number of men convicted on charges of unlawful assembly, rioting, etc., in connection with picketing on June 18 were sentenced to terms of imprisonment of from three months to one year. The President of the Longshoremen and Water Transport Workers of Canada was sentenced to three months' imprisonment, being convicted of inciting to unlawful assembly but was acquitted on a charge of inciting to riot.

**COAL MINERS, DRUMHELLER, ALTA.**—Employees in one mine ceased work on November 14, negotiations with the employer as to piece rates not being successful. The man-

agement and the United Mine Workers of America had signed the same agreement as other mining companies in the district on August 28, 1935, but with a provision that contract rates for machine mining and loading were to be negotiated. As scales have not yet been installed the contract rates are by the yard instead of the ton and as the rates proposed by the company were not acceptable to the miners they ceased work on November 14. On November 21 the western representative of the Department of Labour met the representatives of both parties in conference and an agreement was reached, a slight improvement in rates being made by the company.

**BAKERS & BAKERY DRIVERS, WINNIPEG, MAN.**—Employees in fifteen or sixteen establishments ceased work on November 19 demanding agreements with the Bakers' and Drivers' Section of the Food Workers' Industrial Union providing for a standard scale of wages for bakers and a sliding scale for drivers. Work was resumed on November 21 when thirteen employers signed agreements with the union. The agreements are outlined elsewhere in this issue.

**SHOE FACTORY WORKERS, VALLEY JUNCTION, P.Q.**—Employees in one establishment ceased work on November 11, the foreman, an officer of the Protective Union of Shoe Workers, having been discharged. At the request of the strikers a representative of the provincial Department of Labour attempted for several days to secure a settlement but on November 21 returned to Quebec and at the end of the month no termination had been reported.

**MOULDERS, ETC., GUELPH, ONT.**—Employees in one establishment ceased work on November 5 when their demands for increases in wages and recognition of the union or of a shop committee were refused. As a result of conciliation by the county crown attorney these demands were conceded and work was resumed on November 12. Certain improvements in working conditions were also made.

**MOULDERS, ETC., WOODSTOCK, ONT.**—Employees in one establishment ceased work on November 18 when their demands for an increase in wages of twenty-five per cent and union recognition were refused, a ten per cent increase being offered. As a result of conciliation by the Mayor a settlement was reached which provided for an increase in wages of ten per cent immediately and five per cent at the end of the year, and for recognition of a shop committee. Work was resumed on November 22.

**OPTICAL WORKERS, TORONTO, ONT.**—Opticians and mechanics employed in seven estab-

## STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1935\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in progress prior to November, 1935.†</b>			
<b>MANUFACTURING—</b>			
<i>Textiles, etc.—</i>			
Cap factory workers, Winnipeg, Man.	27	54	Commenced Oct. 21, 1935; alleged violation of agreement as to wages and "closed shop"; terminated Nov. 2, 1935; compromise.
Custom tailors, Toronto, Ont.	6	150	Commenced Oct. 29, 1935; for increased wages; unternminated.
<i>Metal Products—</i>			
Moulders, Oshawa, Ont. ....	47	94	Commenced Oct. 31, 1935; against discharge of employee; terminated Nov. 4, 1935; compromise.
<b>TRANSPORTATION—</b>			
<i>Water—</i>			
Longshoremen, Powell River, B.C.	.....	.....	Commenced May 17, 1935; for union recognition and union wage scale; stated in report of Royal Commissioner not to have been a strike or lock-out.
Longshoremen, Vancouver, B.C.	700	10,000	Commenced June 5, 1935; against cancellation of agreement; unternminated.
Coastal longshoremen, ship's crews, ship liners, boom log workers, etc., Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.	733	10,000	Commenced June 15, 1935; in sympathy with longshoremen on strike at Vancouver from June 5, 1935; unternminated.
<b>(b) Strikes and Lockouts commencing during November, 1935.</b>			
<b>‡MINING, ETC.—</b>			
Coal miners, Drumheller, Alta.	74	592	Commenced Nov. 14, 1935; for increase in wages; terminated Nov. 22, 1935; compromise.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Bakers and bakery drivers, Winnipeg, Man.	130	260	Commenced Nov. 19, 1935; for union wages and working conditions; terminated Nov. 20, 1935; in favour of workers.
<i>Boots and Shoes—</i>			
Shoe factory workers, Valley Junction, P.Q.	36	648	Commenced Nov. 11, 1935; against discharge of workers; unternminated.
<i>Metal Products—</i>			
Moulders, etc., Guelph, Ont. . .	130	650	Commenced Nov. 5, 1935; for increased wages, improved working conditions and recognition of shop committee; terminated Nov. 9, 1935; in favour of workers.
Moulders, Woodstock, Ont. . . .	87	348	Commenced Nov. 18, 1935; for increase in wages and recognition of union; terminated Nov. 21, compromise.
<i>Miscellaneous—</i>			
Optical workers, Toronto, Ont	114	1,500	Commenced Nov. 14, 1935; for increased wages, recognition of union and change in conditions; unternminated.
<b>SERVICE—</b>			
<i>Business, etc.—</i>			
Hotel employees, Toronto, Ont.	25	425	Commenced Nov. 12, 1935; for increased wages and reduced hours; unternminated.
Restaurant employees, Cal- gary, Alta.	24	12	Commenced Nov. 13, 1935; for increase in wages; terminated Nov. 19, 1935; in favour of workers.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

†In the November issue of the Labour Gazette a footnote to this table intended to refer to a strike of longshoremen at Powell River, B.C., was erroneously made to refer to a strike of longshoremen at Vancouver, B.C.

‡For strike of coal miners at Edmonton see page 1098.

lishments ceased work on November 14 when their demands for recognition of the Optical Workers' Federal Union, for increases in wages and for the establishment of an apprenticeship system, were refused. Toward the end of the month the representative of the Department of Labour held conferences with representatives of the parties but a settlement was not reached.

**HOTEL EMPLOYEES, TORONTO, ONT.—**Cooks, maids, etc., in one hotel in Toronto ceased work on November 12, demanding re-instatement of a worker discharged for union activity and also union recognition and wage in-

creases. At the end of the month a settlement had not been reported.

**RESTAURANT EMPLOYEES, CALGARY, ALTA.—**Employees, chiefly waitresses, in four restaurants in Calgary ceased work at various dates between November 13 and November 19 for a few hours in each case, demanding payment of wages in accordance with the provincial minimum wage scales. The provincial officials assisted in the collection of the wages due and work was resumed in a few hours. It is reported that within a few days those who had participated in the dispute were dismissed and replaced.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, in the review of Strikes and Lockouts in Canada and Other Countries, 1934. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in October was 58 and 16 were in progress from the previous month, making a total of 74 disputes in progress during the month, involving 90,300 workers with a time loss of 470,000 working days for the month. Of the 58 disputes beginning in the month, 12 were over demands for increases in wages, 5 over proposed wage reductions, 11 over other wage questions, 2 over questions as to working hours, 11 over questions respecting the employment of particular classes or persons, 13 over other questions respecting working arrangements and 2 over other questions. Two stoppages were due to sympathetic action. During the month, settlements were reached in 52 disputes, of which 18 were settled in favour of workers, 20 in favour of

employers and 14 resulted in a compromise. In 4 other disputes, work was resumed pending negotiations.

The strike of coal miners in South Wales and Monmouthshire was mentioned in the last issue of the *LABOUR GAZETTE*. The miners went out on strike in sympathy with small strikes of miners demanding the discharge of non-union workers. The strikers won formal recognition of their union as the representative of the employees. A total of 55,000 miners were involved in these sympathetic stoppages which began on various dates between October 14 and 21, and ended on various dates from October 17 to 25. The demand for a wage increase of two shillings per day was merged with a general demand for this increase throughout the whole country, the miners' union endeavouring to secure a national agreement.

### Irish Free State

The number of disputes beginning in the year 1934 was 99, involving 166 establishments and 9,288 workers with a time loss of 180,080 working days for the year.

The Department of Immigration and Colonization has recently issued figures showing the immigration to Canada for the six months ended September 30, 1935. The total number of immigrants entering the Dominion during that period was 6,579 of whom 1,476 were males, 2,688 females and 2,415 children under eighteen years of age. Those of British origin numbered 1,378; of U.S. origin, 3,049; of Northern European races, 342; and other races, 1,810. In the corresponding period of 1934 immigration totalled 7,472, including 1,448 British, 3,690 of U.S. origin, 367 of Northern European races and 1,967 of other races.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM AUGUST 1, 1935, TO NOVEMBER 30, 1935

**C**ONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The following statement covers the more important conciliation matters dealt with during the period from August 1, 1935, to November 30, 1935. (An article covering the period April 1, 1935, to July 31, 1935, appeared in the *LABOUR GAZETTE*, August, 1935, page 718).

### *Ship Freight Handlers, Port of Montreal.—*

In the latter part of July it was brought to the attention of the Department of Labour that a dispute existed between the Canada Steamship Lines, Limited, Montreal, and certain of their employees, members of *L'Union des Travailleurs du Port de Montreal*. A conciliation officer of the Department held conferences with the parties directly interested and arrangements were made for further negotiations which resulted in a satisfactory adjustment of the matters in dispute.

*Longshoremen, Port of Quebec.—*During the latter part of July a dispute occurred in the Port of Quebec, involving longshoremen, mem-

bers of *L'Union Nationale des Travailleurs du Port de Quebec and District, Inc.*, and the *Vaillancourt Transportation Company* in regard to the hourly rate of wages to be paid to longshoremen and also the employment of non-union labour, which, for a period, interfered with the discharging of cargo of certain vessels. Upon the request of the Chairman of the Quebec Harbour Commissioners, a departmental conciliation officer was instructed to proceed to Quebec to render any assistance possible. The conferences arranged by this official between the disputing parties resulted in a settlement of the matters at issue.

### *Street Railway Employees, Windsor, Ont.—*

In the August issue of the *LABOUR GAZETTE*, at page 722, reference was made to an application received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Sandwich, Windsor and Amherstburg Railway Company and certain of their employees, members of Division No. 616 (Windsor), Amalgamated Association of Street and Electric Railway Employees of America. Subsequently it became evident from information gathered by the departmental conciliation officer who was assigned to the case that no dispute existed between the company and the employees, but that whatever dispute there might be was one between the union and non-union employees, and therefore the matter was not a proper one to be dealt with by a Board of Conciliation and Investigation.

### *Electric Railway Employees, London, Ont.—*

In the August issue of the *LABOUR GAZETTE*, at page 722, there was a reference to the application made by certain employees of the London and Port Stanley Railway Commission being clerks, shopmen, sectionmen, agents, despatchers, motormen, conductors, brakemen, baggagemen, etc., members of Local No. 262, Canadian Brotherhood of Railway Employees, for the establishment of a Board of Conciliation and Investigation to deal with a dispute involving increased wages and improved working conditions. It was reported that, following conferences held between the interested parties and a departmental conciliator, a settlement appeared probable. Subsequently the Department was informed that an agreement had been signed, thereby making unnecessary the establishment of a Board in this matter.

*Gas Production Department Employees, Winnipeg, Man.*—Reference was made in the August issue of the LABOUR GAZETTE, at page 723, to the efforts of a conciliation officer of the Department of Labour to secure a settlement of a dispute between the Winnipeg Electric Company and certain of its employees in the gas production and distribution service, an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act having been received from the employees concerned. Early in August the parties directly interested agreed to accept the suggestion of the departmental officer in regard to a settlement of the matter at issue, and the dispute was thereby disposed of without the necessity of Board procedure.

*Linemen, Cablemen, etc., Winnipeg, Man.*—In the August issue of the LABOUR GAZETTE, at page 722, reference was made to an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act from certain employees of the City of Winnipeg being linemen, cablemen, linemen's helpers, troublemen and groundmen, members of Civic Linemen's Association, Winnipeg, Manitoba, and to negotiations which were instituted by a departmental conciliation officer in an effort to secure a settlement of the dispute without Board procedure. It subsequently developed, however, that further conferences failed to settle the issue, and the Department was urged by the employees' representatives to establish a Board. The matter was again taken up by the Department with the civic authorities and the way was opened for the resumption of negotiations with the prospect that a direct settlement would be reached. At the end of November negotiations were still in progress.

*Street Railway Employees, Winnipeg, Man.*—In the August issue of the LABOUR GAZETTE, at page 721, reference was made to a dispute which had arisen between the Winnipeg Electric Company and certain of its employees being members of the Street Railway Employees' Unit, One Big Union, over the dismissal of two members of the Unit, and which was at the end of July still receiving the attention of the Department of Labour. On August 19 an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with this dispute was received in the Department, but under date of

August 22 the application was withdrawn, the Department being advised that a settlement had been reached.

*Operating Engineers, Hamilton, Ont.*—Reference was made in the August issue of the LABOUR GAZETTE, at page 722, to a dispute which had arisen between the Hamilton By-Product Coke Ovens, Limited, and their locomotive, hoisting and stationary engineers and firemen, members of Local Union No. 700, International Brotherhood of Operating Engineers, and the application of the employees for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with the matter. A settlement of the questions at issue had been secured by the departmental conciliation officer, but a misunderstanding had arisen over the wording of the agreement and the matter was still receiving attention at the end of July. Further conferences in which the departmental conciliator participated cleared up the situation and the agreement was signed early in August.

*Coal Miners, Drumheller, Alta.*—In the August issue of the LABOUR GAZETTE, at page 718, reference was made to an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute respecting a new agreement involving increased wages which had arisen between various coal mining companies in the Drumheller, Rosedale and Wayne Districts in Alberta and their employees, members of District No. 18, United Mine Workers of America. At the joint request of the parties affected a conciliation officer of the Department of Labour interested himself in the matter, but his efforts were not successful and a Board was established. The Board, which reported early in August, recommended an increase in wages of 5 per cent, and the Western Representative of the Department conferred on numerous occasions with officials of the miners' organization and of the mine operators for the purpose of having the disputing parties agree to accept the Board's report, or of finding some other acceptable basis of settlement. Certain of the mine operators intimated that their companies would be agreeable to an agreement in conformity with the recommendations of the Board; others held that it was impossible to grant a wage increase. The miners' representatives, on the other hand, were insistent that a greater increase should be awarded.

However, after prolonged negotiations, a referendum vote of the miners as to the acceptance of the Board's report was taken which proved to be in the affirmative. As a consequence, following further negotiations, several of the mining companies signed new agreements on this basis, and subsequently all the companies involved in this dispute did likewise.

*Coal Miners, Edmonton, Alta.*—Reference was made in the August issue of the LABOUR GAZETTE at page 719, to a dispute which had arisen in the Edmonton district involving twelve coal mining companies and their miners, members of the United Mine Workers of America, District No. 18. Application on behalf of the miners for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act had been made. A conciliation officer of the Department of Labour had conferred with the interested parties and in the latter part of July it was verbally agreed that the matter would be allowed to remain in abeyance pending the report of a Board of Conciliation and Investigation then dealing with a wage dispute between various coal mine operators and their employees in the Drumheller field. Following the report of this Board early in August, conferences were renewed between representatives of the miners and the mine operators in the Edmonton territory. It developed, however, that these negotiations proved unsuccessful, and a joint request was made for the services of the Western Representative of the Department of Labour. Following the arrival of this officer in Edmonton early in September several joint conferences were held and considerable headway made towards reconciling the differences between the disputing parties, but a definite settlement could not be reached at the time. Subsequently the departmental officer suggested to both parties that certain inequalities be adjusted, that a general increase in wages of 5 per cent be made effective in line with the Drumheller Board report, and that negotiations be resumed to this end. This course was followed and as a consequence an agreement on this basis was signed on or about the middle of October. The application for the establishment of a Board of Conciliation and Investigation was withdrawn under date of October 22.

*Coal Miners, Comox Mines, Cumberland, B.C.*—Coal miners, numbering approximately 500, said to be members of the Mine Workers' Union of Canada, employed by the Canadian Collieries (Dunsmuir), Limited, ceased work

on August 6, 1935, for the purpose of holding a mass meeting to discuss the action of the management in making effective certain contract rates without the approval of the miners' committee. This action on the part of the employees was held by the management to be in violation of the agreement and the company gave notice that No. 5 mine would be closed until further notice. On August 12 a telegram was received by the Minister of Labour from a representative of the miners requesting that a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act be established. The miners' representative was asked by telegraph if the miners would be willing to return to work at once if a Board were established and the reply received stated, among other things: "Miners are returning to work on the Company's conditions, under protest, pending granting of Board." When full particulars had been obtained in the Department of Labour respecting the matters in dispute it appeared that they were capable of being dealt with satisfactorily through the conciliation service without the necessity of Board procedure. Both parties were advised to this effect and a conciliation officer was assigned to the case. In the conference which followed there appeared to be very little difficulty in the way of solving certain minor matters which had arisen, but the problem of bringing both parties into agreement as to the method of employment of all the miners formerly employed could not be solved. The company maintained that due to loss of coal orders it was not in a position to employ as many miners as formerly. On the other hand the miners' committee contended that what work was available should be divided on an equitable basis. A Board of Conciliation and Investigation was therefore established on October 12.

*Substation and Hydro Plant Employees, Winnipeg, Man.*—An application was received in the Department of Labour on August 2, 1935, for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Winnipeg Electric Company, the Manitoba Power Company, the Northwestern Power Company, and the Winnipeg, Selkirk and Lake Winnipeg Railway Company, and certain of their employees being members of the Association of Substation and Hydro Plant Employees, relating to wages and working conditions. Ninety-six men were said to be directly affected. This matter received

the attention of a conciliation officer of the Department of Labour who was in Winnipeg at the time and who conferred with the interested parties. At a joint conference which was called on his initiative some progress towards a settlement was made, but it was not found possible to dispose of the issue. A Board was therefore established early in September.

*Machinists, Hamilton, Ont.*—In the latter part of August a representative of the International Association of Machinists advised the Department of Labour that his negotiations with an official of the Dominion Foundries and Steel Limited, Hamilton, Ontario, in respect to wage rates, had not proved successful and that the assistance of the conciliation service of the Department of Labour would be appreciated. Accordingly a departmental conciliator proceeded to Hamilton and conferred with officials of the company. It was learned that an investigation relating to working conditions, wages, etc., in the machine shop had been under way for a considerable period which, it was anticipated, would be completed within a comparatively short time, and that as soon as the necessary information had been obtained the whole situation would receive consideration. The departmental officer on subsequent occasions conferred with officials of the company, and early in November an adjustment was made in the hourly wage rate paid to machinists which was quite acceptable to the men concerned. Approximately 30 employees were involved.

*Coal Miners, East Coulee, Alta.*—In the early part of September a request was received in the Department of Labour from Local Unit No. 29, Mine Workers' Union of Canada, East Coulee, Alberta, for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute in respect to wages involving the coal miners employed by four companies, namely, the Atlas Coal Company, the Murray Collieries, the Aetna Coal Company, and the Empire Collieries. Following this request, a departmental conciliation officer proceeded to Alberta and arranged for conferences between the miners' representatives and officials of the mining companies, which in due course resulted in agreements being reached representing a general increase in wages of five per cent in line with the increase made effective in the Drumheller field.

*Cotton Mill Employees, Welland, Ont.*—Word was received in the Department of Labour on October 9 that a strike of the

employees of the Empire Cotton Mills, Limited, Welland, Ontario, appeared imminent as a consequence of the company having reduced the regular working hours without increasing the hourly rate of wages. A conciliation officer of the Department visited Welland and conferred with the manager of the company and with representatives of the employees. The manager of the company took the position that the employees had no real ground for complaint inasmuch as the company was paying wages equal to those in effect in any like industry in the Province of Ontario, but stated that, in view of the employees attitude, and also for other reasons, the former working hours would be reverted to at once. This action on the part of the management appeared to meet with the approval of the employees concerned.

*Tailors, Toronto, Ont.*—On November 1, at the request of a local representative of the Journeymen Tailors' International Union, Toronto, a conciliation officer of the Department of Labour, accompanied by the Fair Wage Officer of the City of Toronto, discussed with the manager of Bilton Merchant Tailors, Toronto, matters relating to a strike on October 29 of tailors who had been in the employ of this establishment. The manager stated that his company could not meet the demand made for a wage increase and as a consequence two regular and three temporary tailors had ceased work. The manager was agreeable to re-employing the two regular men but declined to take back the three temporary employees, stating that their work was unsatisfactory.

*Printers, London, Ont.*—Early in November the Minister of Labour was informed that the printers in London now unemployed as a result of a strike involving the *London Free Press* and *London Advertiser*, which occurred in March, 1934, desired the services of a conciliation officer in respect to a misunderstanding which had developed over a subsequent verbal undertaking of the managers of these newspapers in regard to employment. The conciliation officer assigned to this case visited London and discussed thoroughly with the interested parties the matters in dispute. The newspaper managements stated that they had fulfilled the undertaking given as to the re-employment of a specified number of printers and the printers' committee acknowledged this to be the case. The committee contended, however, that the management had verbally agreed to take on additional printers as soon as possible, but the management held that their offer was to reinstate additional printers

"as soon as opportunity offered." It was acknowledged by both parties that the two newspapers have a full staff of workmen, and, in order to absorb more of the strikers, it would be necessary to release some of the employees who had been hired to fill the vacancies created when the former employees ceased work. This the management is not willing to do other than for cause. The managers stated, however, that no discrimination would be shown against any of the strikers, that preference of employment would be given them as vacancies occurred for printers, and, in addition, the printers would also be given the first opportunity of accepting any other positions which might become vacant in the printing offices.

*Jewellers and Watchmakers, Montreal, P.Q.*—Early in November it was made known to the Department of Labour that International Jewellers and Watchmakers' Union, Local No. 43, Montreal, P.Q., desired the assistance of the conciliation service of the Department of Labour for the purpose of arranging a conference between its representatives and their employers respecting wages and conditions of employment. Accordingly a conciliation officer conferred with officials of the union and a number of the employers to this end. It developed, however, that a request had already been made to the Minister of Labour of the Province of Quebec to bring the manufacturers into conference with the object of securing a collective agreement under the Collective Labour Agreements Extension Act, which had been granted, and the departmental representative did not proceed further in the matter.

*Coal Miners, Canmore, Alta.*—In November a dispute arose between the Canmore Coal Company, Limited, Canmore, Alberta, and its employees as represented by the Canmore Miners' Union regarding certain conditions under which the miners were frequently required to push the cars up heavy grades. Separate and joint conferences were arranged by a departmental conciliator and, as a consequence, the matter in dispute was adjusted to the satisfaction of the parties directly interested.

*Street Railway Employees, Hamilton, Ont.*—On November 1, 1935, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute respecting wages and hours which had arisen between the Hamilton Street Railway Company and certain of their employees, members

of Division No. 107, Amalgamated Association of Street and Electric Railway Employees of America. Approximately 300 employees were stated to be involved. Upon receipt of this application a departmental conciliation officer was instructed to confer with the parties to the dispute with the object of having the matters adjusted without the necessity of Board procedure. Accordingly a conference was held in Toronto on November 7, and all points at issue were thoroughly discussed. It developed, however, that, although it was quite apparent that the most friendly relations existed between the management and the representatives of the employees, neither party would make any concession, but both were agreeable to having the dispute dealt with by a Board of Conciliation and Investigation. The manager of the company stated that the final decision rested with the Hydro Electric Power Commission of Ontario, and accordingly the departmental officer discussed this matter with the Chairman of that Commission. The Chairman took the position that this matter had already been discussed fully by the whole Commission and that the dispute would have to be dealt with through Board procedure. In answer to an enquiry of the departmental officer the Chairman stated that the Commission would be agreeable to being bound by the findings of a Board of Conciliation and Investigation, should it be established, provided the employees' representatives would also agree to accept the report. The latter, however, would not consent to this. At the close of the month this matter was still receiving departmental attention.

*Coal Miners, Robb, Alta.*—Representatives of the coal miners employed by Lakeside Coals, Limited, Robb, Alberta, having failed in their conferences with officials of the employing company to bring about a five per cent increase in wages, requested the conciliation service of the Department of Labour. A departmental conciliator conferred with representatives of both parties on November 25 and 26, but the manager positively declined to grant the increase sought and stated that his company would make application to the Minister of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with the matters in dispute. Sixty-five miners were stated to be employed by this company.

*Coal Miners, Edmonton, Alta.*—Approximately fifty coal miners, members of the United Mine Workers of America, employed by the Edina Coal Company, Limited, Ed-

monton, Alberta, ceased work on November 26 due to a dispute with the management over a reduction in the capacity of coal cars. The capacity of the cars upon which the contract was based was 23.5 cubic feet, because of roof conditions, the company made a reduction to 20.3 cubic feet. A strike for one day only had occurred on November 18, but the miners resumed work on the understanding that the matter would be referred to an independent chairman, as provided in their agreement, and it was mutually agreed that the Western Representative of the federal Department of Labour would be requested to act in that capacity. The departmental officer, upon arriving at Edmonton on November 25, conferred with representatives of the miners and with the mine management, and recommended a settlement upon a pro rata basis, notifying both parties accordingly. It developed, however, that there were certain other matters which, in the opinion of the miners, represented grievances, and they failed to report for work on the following morning. Further conferences were arranged immediately, and

on November 26, through the efforts of the departmental representative, the management agreed to raise the price for loading machine mining cars from 29½ cents to 30 cents, and a definite understanding was reached in respect to certain grievances. These concessions were made known to the miners, who held a meeting the same night and, by vote, decided to resume work the following morning, November 27.

*Coal Miners, Drumheller, Alta.*—Coal miners, members of the United Mine Workers of America, District No. 18, employed by the Elgin Coal Company, Limited, Drumheller, Alberta, ceased work on November 15 due to a dispute over contract rates. Direct negotiations between officials of the Company and representatives of the employees having failed to solve the issue, a joint request was made for the services of a conciliation officer of the Department of Labour. Accordingly a conciliator proceeded to Drumheller, an agreement was reached on November 22, and the miners resumed work the following day.

### Contractors for "labour only" considered as workmen for compensation purposes

By a new ruling of the Ontario Workmen's Compensation Board "all contractors in the building trades who take contracts for labour only, or substantially for labour, and perform the work themselves either alone or in partnership with others, are to be deemed 'workmen' of the principal who lets the contract."

The order which has been circulated to the trade then proceeds:

"This means that you must include the value of the labour on all such contracts in your returns to the Board and pay assessment thereon. In contracts such as excavating, heating, eavestroughing, etc., you will be entitled to make a reasonable deduction from the contract price for the value of team hire or materials furnished under the contract.

"Please note that under section 17 of the Act it will be illegal for you to charge any such 'contractors' with the cost of the coverage of themselves or their partners, as they are deemed to be 'workmen' within the meaning of the Workmen's Compensation Act."

The *Alberta Gazette* of November 15 contains an announcement proclaiming in effect the Natural Products Marketing Act of that province. The legislation was enacted on April 16, 1934 (*LABOUR GAZETTE*, May, 1934, page 442). This enactment enables the prov-

ince to take advantage of federal legislation relating to the marketing of natural products.

As reported in the *LABOUR GAZETTE* for May, 1935, page 420, the Manitoba Legislature, at its last session, adopted a resolution for the appointment by the government of a special committee of fifteen members to investigate and report on the question of workmen's compensation in Manitoba. By Order in Council of November 22 the personnel of this committee was named and included five representatives of the employers, five of the employees, and five of the legislature.

The *Canada Gazette* of November 2, 1935, contains an amendment to the bylaws of the pilotage district of New Westminster, B.C. This amendment specifies that the rates for pilotage in the district are to be subject to a reduction of ten per centum during the period of one year from August 15, 1935.

Statistics of employment in the Civil Service of Canada have recently been published by the Dominion Bureau of Statistics.

A comparison of total employees for March, 1934, with the number shown for March, 1933, shows a decrease of 1,442. The principal decreases occurred in the Department of Agriculture with a reduction of 97; Marine 200; National Revenue 215; Post Office, 268; Public Works 135; Railways and Canals 89 and Trade and Commerce, 164. The salary expenditure showed a concurrent reduction.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Decisions

**R**EPORTS have been received of six cases recently settled by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, October, 1935, page 893, and in previous issues; and the fifth report of the proceedings of the Board, covering the period from October 1, 1930, to September 30, 1933, was issued as a supplement to the issue of December, 1933.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### Case No. 445.—Canadian National Railway (Atlantic Region) and the Brotherhood of Railroad Trainmen

On September 18, 1934, a conductor and crew were ordered in freight service from Edmundston to Monk, a distance of 124 miles; on arrival at Pelletier the engine was taken from their train and returned to Estcourt, a distance of 13 miles, to assist a train from Estcourt to Pelletier, only the engine crew having been used. Claim was made for payment under article 32 of the schedule, or failing this, under article 27, both of which are quoted in the employees' contention.

The railways contended that article 32 relating to trains tied up between terminals had no bearing on services covered by article 27, such as doubling, assisting, etc.

The Board referred the case back to the parties for disposition on the basis of the established practice.

#### Case No. 446.—Canadian Pacific Railway (Western Lines) and the Brotherhood of Locomotive Engineers

This case centered about the claim of an engineer for 50 miles as "run-around" at Midway, April 15, 1934.

This engineer was regularly assigned to trains 11 and 12 and was available in Midway on the date in question when another engineer was run out on train 12.

The employees' contention was that the regular engineer was entitled to be used on this train and not being so used was entitled to the claim for 50 miles run-around.

The contention of the company was that owing to unavoidable interruptions on the line west of Midway, passenger trains were considerably off their schedules and in order to handle them it was necessary for a short period to place a third engineer in this service. The regular engineer suffered no loss either by way of compensation or otherwise, due to the handling of crews at Midway, and the company claimed that as he was enabled to earn the mileage which the run called for as provided in Local Rule "M" in the B.C. schedule, that he was not entitled to payment for this claim.

The representatives of the employees and the railway appeared before the Board and it was shown that in the circumstances which obtained the regular engineer could have picked up his run at Midway.

Accordingly, the claim of the employees was sustained.

#### Case No. 447.—Canadian Pacific Railway (Western Lines) and the Brotherhood of Locomotive Engineers

An engineer was assigned to a way freight run, Nelson to Gerrard and return. A portion of this run is made by the train being loaded on a barge and moved between Proctor and Lardeau and Kaslo and Proctor. During the round trip the train was on barges a total of 12 hours and the engineer claimed way freight rates for the full trip but was allowed through freight rates for time on barges.

The contention of the employees was that the claim should be paid under the provisions of article 32, clause A, which reads:—

"Engineers on regularly assigned way freight or switch trains will receive fifty-two cents per hundred miles, or per day of eight hours, in addition to through freight rates."

The company contended that the practice of handling crews on barge between subdivisions on the Kootenay division has been in effect since 1916, and in that time engineers have been paid at through freight rates for time in transit on the barge.

The decision of the Board was that in the case of assigned way freight crews making movements on barges way freight rates will apply for the entire trip.

The claim of the employees was sustained.

**Case No. 448.—Canadian Pacific Railway (Western Lines) and the Brotherhood of Locomotive Engineers**

This case concerns the claims of engineers at Fort William for extra mileage allowance for yard movements at Raith, which is an intermediate point on the Keministiquia subdivision between Fort William and Ignace. The claim of one engineer for 1½ miles on January 31, 1934, was filed as a specific case.

On January 16, 1935, the following bulletin was issued by the Superintendent.

"When assisted westbound freight trains arrive at Raith, and are not required to take the siding, the train will be pulled to the west end of the yard, the road engine taken through track No. 1 to the standpipe east of the depot for water and then returned to the head end of the train where coal can be taken.

"This will eliminate two stops being made at Raith, one for water and one for coal."

The employees claimed that as a result of the foregoing order the engineer was required to run his engine light a distance of thirty-nine pole lengths one way and thirty-six pole lengths the other way. This movement was not incidental to switching but was necessary by reason of not being permitted to stop at water standpipe (as had previously been done) before pulling to west end of the yard. The distance thus run with light engine is more nearly two miles, but the claim was made for 1½ miles, and in as much as the mileage was run, the employees contended that the engineer should be compensated in the same manner as for other mileage made during the trip.

The contention of the company was that the yard movement of the engine involved was not inconsistent with the usual incidental service and should not be paid as arbitrary mileage allowance.

The claim of the employee was not sustained.

**Case No. 449.—The Canadian Pacific Railway (Western Lines) and Brotherhood of Locomotive Firemen and Enginemen**

This case concerns the claim for a new day submitted on December 22, 1934, by an engineer and a fireman and on January 5, 1935, by the same engineer and another fireman on the ground that they were required to leave Broadview for duty after having completed a day in yard service at that point when the yard switch crew had been released. The employees supported the claim for a new day under the provisions of article 2, clause (d), paragraph 3 of Locomotive Engineers, Firemen and Hostlers' schedule which reads as follows:—

"Should engineer or fireman be used out of initial point after completing a day, a new day will commence."

The company claimed that payment for this service was governed by the provisions of article 25, clause (g) and the company further contends that the incorporation of clause (g) in the schedule was to cover payment for such services; that this practice of using switch engines to assist is followed out on other terminals on western lines and it has not been contended or understood that the method of payment should be in accordance with the provisions of article 2, clause (d).

The Board was of opinion that it was not within the intent of the agreement that yard engine crews should be held on duty in overtime to perform assisting service on the main line even within what are regarded as switching limits, if unaccompanied by a member of the yard crew, and particularly so if such service involves the handling of train orders and the throwing of switches.

It was recommended by the Board that the parties should endeavour to negotiate between themselves an agreed application of the schedule rules as to the conditions affecting engine crews, in switching service assisting trains out of Broadview.

**Case No. 450.—The Canadian Pacific Railway (Western Lines) and Brotherhood of Locomotive Firemen and Enginemen**

The mileage which a senior passenger engineer at Regina is permitted to make on his run was the main issue in this case.

According to the *ex-parte* statement of the employees the engineer in question was assigned to trains 32 and 328 running between Regina and Gronlid. The statement adds that there are approximately 6,600 miles per month in this run but the engineer is only permitted

to make nine trips by working three weeks or approximately 4,410 miles. The mileage for passenger engineers on this run as agreed to by the Engineers' Committee is 4,600, with a carryover after 4,700. The engineer, who is the senior passenger engineer at Regina, claims that he is being discriminated against as he is only permitted to make 4,410 miles while other passenger engineers, junior to him, are permitted to build up their own miles to 4,700 per month by taking the miles in excess of 4,410 off his run.

The contention of the employees in supporting the claims of the engineer was signed by the general chairman of the Brotherhood of Locomotive Firemen and Enginemen of which organization the engineer was a member.

However, the company in its statement indicated that "an agreement, signed by the three local chairmen of the Brotherhood of Locomotive Engineers, who have jurisdiction over the Saskatchewan district, and approved by the general chairman of the B. of L. E. and the Master Mechanic of the company at Moose Jaw, was made whereby the passenger runs out of Regina were re-assigned as between the Saskatoon and Regina Division Engineers."

The company, after detailing its arrangement with the B. of L. E., points out that the engineer in the case "is a member of the B. of L. F. and E. and not of B. of L. E., and is the senior engineer out of Regina. . . ."

"The representatives of the B. of L. E. have refused to agree to any change in the assignments referred to and as this dispute would appear to be one that is entirely between the two brotherhoods, it is not thought that the company should be expected to offer an opinion either way, or be drawn into this dispute.

"The company does not wish to present any oral evidence as this is a dispute between the two organizations in connection with mileage limitation."

The Board in its decision stated:—

"The engineers' assignments out of Regina are in effect in accordance with arrangements between the representatives of the company and of the engineers and are within the terms of the agreement governing such conditions." It adds that the engineer "occupies the assignment in which he is working by his own choice under the conditions provided for in the assignment. Therefore, the claim of the employees is denied."

In a bulletin entitled "Coal Statistics for Canada," the Dominion Bureau of Statistics records that Canadian coal production during 1934 totalled 13,810,193 short tons as compared with 11,903,344 short tons in the preceding year. Nova Scotia, New Brunswick, Manitoba, Alberta and British Columbia mines produced more coal than in 1933, on the other hand, Saskatchewan's output declined 2 per cent and the Yukon's output, 26 per cent.

Exports of Canadian coal advanced to 306,335 tons from the 1933 total of 259,233 tons, while imports of coal into Canada in 1934 showed the first upward trend since 1930. In 1934, the Canadian imports totalled 13.8 million tons; in the preceding year 11.5 million tons were imported, while in 1930 imports amounted to 17.6 million tons; Canada's anthracite coal supply in 1934 was obtained from the following sources; the United States, 51 per cent; Great Britain, 46.5 per cent; Germany, 2 per cent, and Belgium and Newfoundland, the remainder. The United States supplied 96.76 per cent of the bituminous coal imported into Canada during the year; Great Britain accounted for 3.22 per cent.

The research work done by the Dominion Department of Mines on the coking of Canadian coals from both eastern and western deposits has resulted in an increase in consumption of Canadian coal, for the manu-

facture of coke, at Winnipeg and Montreal. The bulletin also states that continued assistance to the operators in the form of a subvention paid by the Dominion Government was responsible, to a considerable extent, for the increased shipments of Canadian coal. In 1934, approximately 2,369,000 short tons of coal were moved under assisted freight rates.

Under the United States Social Security Act (LABOUR GAZETTE, September, 1935, page 801) provision was made for old age pensions and maternal and child welfare by the following section in the general title of the Act:—

To provide for the general welfare by establishing a system of Federal old-age benefits, and by enabling the several States to make more adequate provision for aged persons, blind persons, dependent and crippled children, maternal and child welfare, public health, and the administration of their unemployment-compensation laws; to establish a Social Security Board; to raise revenue; and for other purposes.

With respect to the above section the Children's Bureau of the United States Department of Labour has published Bulletin (No. 1) dealing with grants to States for maternal and child welfare under this legislation.

## CONFERENCE OF BRITISH COMMONWEALTH STATISTICIANS, 1935

### Decisions and Resolutions on Labour Statistics

THE report of the second conference of British Commonwealth Statisticians in Ottawa from September 13, to October 9, 1935, has been issued recently. (The proceedings of the conference and the subjects dealt with were briefly noted in the LABOUR GAZETTE for September on page 797 and October, page 886.)

The first conference was held in London in 1920 in accordance with recommendations of the Dominions Royal Commission, of 1911-1917, and of the Imperial War Conference of 1918. Recommendations for improvements in and greater co-ordination of statistics throughout the Commonwealth were made at the Imperial Conferences of 1923 and 1926 and the Imperial Economic Conference of 1932 at Ottawa recommended that a second conference of British Commonwealth Statisticians should be held at as early a date as possible.

The meeting at Ottawa was finally agreed upon after consultation with the various countries, the final agenda being as follows:

(i) The examination from an Imperial standpoint of international obligations regarding statistics.

(ii) Uniformity of statistical classification, including (a) the classification of commodities in production, trade and price statistics; (b) the classification of industries in the population census and in production and labour statistics; and (c) the classification of occupations in the population census and in vital and labour statistics.

(iii) The preparation by each Government of the Empire of annual summaries of external trade with Empire and foreign countries, arranged in accordance with the agreed classification.

(iv) A scheme of co-operation in trade statistics whereby the origins and destinations of the more important articles of Empire trade may be satisfactorily ascertained, each part of the Empire to suggest the commodities in which it is specially interested.

(v) A scheme of co-operation in statistics of output of industries of major importance.

(vi) Methods of calculating the "invisible" items of the balance of international payments and collaboration in estimating such items, including capital movements (direct and portfolio investments), the tourist trade, interest payments, freight payments, insurance premiums and remittances, advertising, charitable and missionary contributions and non-commercial remittances.

(vii) Agreement upon a minimum scale of data, and upon basic uniformity of method in the collection, analysis and publication of the statistics of prices of commodities (including export prices), securities, and of services, wages and allied subjects.

(viii) Statistics of road transport.

(ix) Census tabulating machinery.

(x) Such other subjects as may be mutually agreed.

The countries of the Commonwealth represented by government statistical officials were Great Britain and Northern Ireland, the Irish Free State, India, South Africa, Australia, New Zealand, Newfoundland and Canada.

The Government of Canada was represented by Dr. R. H. Coats, Dominion Statistician (Chairman), Mr. Herbert Marshall (Secretary), and Mr. S. A. Cudmore, all of the Dominion Bureau of Statistics. The British delegation consisted of Sir Francis Floud, K.C.B., High Commissioner in Canada, Mr. E. C. Ramsbottom, O.B.E., Director of Statistics in the Ministry of Labour, and officials of the Ministries of Agriculture and Fisheries, Transport, and of the Board of Trade. The Imperial Economic Committee also was represented by an observer.

Committees were formed for the drafting of resolutions, after discussion in the Conference, on the following: Agriculture, Fisheries, Forestry, Mining, Industrial Production, Uniformity of Statistical Classification (Commodities, Industries and Occupations), Classification of Commodities in Trade Statistics, Gold Movements in International Trade, Source of Imports and Destination of Exports, Valuation of Imports and Exports, Balance of International Payments, Index Numbers of the Prices and Volume of External Trade, Wholesale Prices, Retail Prices and Cost of Living, Labour, Road Transport, Tabulating Machinery, Empire Broadcasts, Power and also for the report of the Conference. The committees included officials from the various governmental departments of Canada in addition to the members of the Conference. Also participating in the conference were the Deputy Ministers and officers of various Departments. Representing the Department of Labour were Mr. Gerald H. Brown, Assistant Deputy Minister, and Mr. C. W. Bolton, Statistician, the latter acting on the committees on Labour and Prices and Cost of Living.

In dealing with each subject the Conference considered the international obligation of the various countries of the Commonwealth re-

garding statistics, and attempted to develop methods and procedure necessary to comply with the various proposals, recommendations and agreements as to statistics resulting from participation in the work of the League of Nations, the International Labour Office, the International Institute of Agriculture, the International Institute of Statistics, etc.

On the problem of carrying out its recommendations the Conference reported:

Early in the deliberations of the Conference the very great differences between the conditions existing in the various parts of the British Commonwealth were repeatedly emphasized, and it was clearly recognized that it would be impossible for all members of the Commonwealth to carry out improvements at a uniform rate. To meet this situation it was decided to make it clear in the Report of the Conference that all the resolutions passed by the Conference were necessarily governed by the question of the practicability of their adoption in any particular part of the Commonwealth. With this qualification in mind the Conference has, in general, drafted its resolutions without any reservations as to the extent to which they may, at the present time, be impracticable in some of the countries of the Commonwealth. Although the resolutions have been drafted and accepted on this understanding it is hoped that the approach to the objects which the Conference has in view will not be deferred unduly on that account.

It is the view of the Conference that the improvement of British Commonwealth statistics is a matter primarily of erecting standards, both as to content and method, in each important field of statistics, which each country of the Commonwealth can agree to adopt either immediately or within reasonable compass of time. Changes in the form of established statistics are difficult and expensive to carry out. In no case should they be embodied in statistical comparisons without discussion in which all points of view both of principle and of local conditions have been canvassed, and a reasonable prospect of finality assured. In other words, the concern of the Conference has been with bases of comparison, the successful determination of which should render subsequent analysis and publication of Empire-wide figures comparatively easy.

### Labour Statistics

The section of the report on labour statistics is as follows:

Considerable progress towards the international standardization of methods of compiling labour statistics has been made during recent years, mainly as a result of the activities of the International Labour Office, which was entrusted, under Part XIII of the Treaty of

Versailles, with the duty of collecting and distributing information on all subjects relating to the international adjustment of conditions of industrial life and labour.

In its discharge of this function the International Labour Office, besides undertaking the actual collection and publication of statistics on these subjects, has assiduously endeavoured to promote international co-operation in the formulation and adoption of uniform methods of compiling such statistics, notably by convening, from 1923 onwards, a series of International Conferences of Labour Statisticians, and by collaborating in conferences arranged by other organizations, at which almost the whole field of labour statistics has been reviewed and agreement reached on a wide range of recommendations.\* †The decisions of these Conferences have in no sense been binding on the Governments represented, and have as yet been only partially applied, but they have already exerted a marked influence in securing a fuller measure of international comparability, and it may reasonably be anticipated that, as and when conditions permit, further progress towards their general application will be made in the future. In these circumstances, the major task before the present Conference, so far as labour statistics are concerned, has been to consider how far the practical experience of the statistical officers representing the different countries of the Commonwealth had indicated that the principles embodied in the recommendations of the International Conference of Labour Statisticians had proved suitable for adoption, and to what extent any modifications or extensions of the principles so formulated had been found to be either expedient or necessary. The deliberations of the Conference extended over a wide field. The subjects discussed included statistics of employment and unemployment, wages and hours of labour, retail prices and cost of living, industrial disputes, and industrial accidents. Under each of these headings the discussions revealed general agreement with the broad principles formulated in the resolutions of the various International Confer-

\*A review of the work of these Conferences, and the text of the resolutions adopted, is published in the Report by the International Labour Office on "The International Standardization of Labour Statistics"—Studies and Reports, Series N (Statistics) No. 19, Geneva, 1934.

†Statements as to the various conferences of labour statisticians at the International Labour Office, Geneva, have appeared in the Labour Gazette as follows: December, 1923, page 1374; April, 1925, page 602; November, 1926, page 1118; November, 1932, page 1185; March, 1934, page 249; December, 1934, page 1116 (Editor, Labour Gazette).

ences of Labour Statisticians, and appreciation of the work of the International Labour Office in this sphere. As was to be expected, reservations were found to be necessary in some cases, either through inability to endorse particular recommendations (usually on points of detail) included in a series of resolutions, or as the result of practical difficulties involved in the adoption, in existing circumstances, of the whole of the wide range of statistical activity envisaged by the decisions of those Conferences. On the other hand, the Conference found it possible to reach general agreement on certain proposals not comprised within the scope of the resolutions of the International Conferences of Labour Statisticians. Most of the recommendations appended, however, re-affirm and emphasize principles formulated by those Conferences, in some cases in the actual terms in which they were adopted, and in others with such adaptations or extensions as appeared necessary or desirable in the light either of the experience gained since those Conferences took place or of the particular needs of the countries of the British Commonwealth.

As regards employment and unemployment the Conference, while strongly impressed by the need for the publication of fuller information and statistics, recognized that in present circumstances, and particularly in the absence, in many countries, of statutory systems of insurance against unemployment or of other measures providing for the registration of unemployed persons generally, it is impracticable to obtain comparable statistics measuring the total volume of employment or unemployment in each of the various countries of the Commonwealth. With a view, however, to providing a closer approach to uniformity than has hitherto been attained, a number of recommendations have been adopted indicating the directions in which the existing statistics might, with advantage, be developed as suitable opportunities arise.

On the subject of wages and hours of labour, the recommendations agreed upon have been framed with the object (1) of securing the collection and publication of a wider range of information than is at present available, relating both to rates of wages and normal hours of labour and to actual earnings and hours, and (2) of emphasizing the need for greater uniformity in the compilation of index numbers measuring the general course of wage rates in different countries. As regards retail prices and cost of living, the resolutions adopted by the Statistical Conference of 1920 and those embodied in the Economic Statistics Convention have been re-affirmed, and the Conference has also declared its general adherence to the

principles underlying the recommendations of the Second International Conference of Labour Statisticians. While the difficulties encountered in such attempts as have hitherto been made to compile statistics measuring the relative levels of wages, costs of living, and real wages in different countries were fully recognized, the Conference has expressed the hope that the International Labour Office will continue its present efforts to find a solution of these difficulties, and has urged the statistical authorities of the countries of the Commonwealth to co-operate in this work by supplying, as far as practicable, the data required by the Office. A noteworthy feature of the discussions on this subject was the appreciation which was shown of the need for maintaining, on an informal basis, the closer contacts established at the Conference between the statistical officers of the several countries represented. This view has found expression in recommendations for an exchange of data relating to wages and cost of living, for mutual consultation in the assessment of the value and significance of such data as a basis for comparisons between different countries, and for co-operation in an endeavour to secure uniformity of date and method in inquiries into working-class family expenditure.

## Resolutions

### Employment and Unemployment

In those countries of the Commonwealth in which there are statutory systems of insurance against unemployment, statistics should be published showing (a) at annual intervals the total numbers of insured persons, and (b) at monthly intervals the numbers and percentages of such persons unemployed on a specified working day.

Where there are centralized schemes of public assistance under which payments are made to unemployed persons who are not covered by statutory systems of insurance against unemployment, statistics should be published showing the numbers of these persons recorded as unemployed on the specified working day of each month, and estimates should be published, if possible at least once a year, of the total number of persons covered by such schemes.

The total numbers of insured persons should be analysed to show the numbers in each of the principal industries, and separate figures should be given for males and females and for adults and young persons. The total numbers of persons recorded as unemployed should be similarly classified, and separate totals should be given for those qualified to receive unemployment insurance benefit or unemployment assistance, and for other unemployed persons.

Where statistics based on widespread systems of unemployment insurance or unemployment assistance are not available, it is desirable, with a view to providing information showing the general trend of unemployment, that particulars should be regularly collected and published showing the numbers and percentages unemployed on a specified working day of each

month, among members of representative organizations of workpeople in the principal industries.

In countries in which a system of public employment exchanges has been established, statistics should be published showing the numbers of unemployed persons registered as applicants for employment on a specified day of each month, distinguishing persons insured against unemployment from those not so insured. Particulars should also be given of the number of vacancies notified by employers and remaining unfilled on the specified day, the total numbers of applications for employment registered during the month, and the numbers of vacancies notified and vacancies filled during the same period.

Where public relief work is provided for unemployed workpeople, information should be published with regard to the numbers employed on such work and the conditions of such employment, and it should be stated whether these workpeople are included in the statistics of unemployment.

The statistics relating to the numbers unemployed on a specified working day of each month should be subdivided to distinguish persons who were not in the service of an employer from those who were only temporarily suspended from work (for example, owing to short time working) on the definite understanding that they were shortly to resume their former employment.

Statistics should be given analysing the total numbers of persons recorded as unemployed according to the length of the period during which they have been unemployed.

In countries in which comprehensive statistics of unemployment are not available from the sources indicated above, the general census of population should be utilized to obtain particulars as to unemployment.

In all the statistics relating to unemployment, persons recorded as unemployed should be those available for and capable of work, but unable to obtain work on the day to which the statistics relate. Persons whose unemployment is due to sickness, invalidity, participation in trade disputes or voluntary absence from work should be excluded.

The statistics of unemployment should be regularly accompanied by statistics of employment. Where a system of unemployment insurance is in operation, it may be possible to provide information as to changes in the number of persons in employment, so far as industries covered by the unemployment insurance scheme are concerned, by deducting the numbers of insured persons unemployed from the total numbers of insured persons, due allowance being made for persons absent from work through causes (e.g. sickness) other than involuntary unemployment. In other cases information as to the changes in the volume of employment should be published periodically, if possible at monthly intervals, based on returns collected from a representative number of employers. On the basis of this information, index numbers should be regularly constructed and published showing the changes in the average level of employment, separate figures being given, so far as practicable, for each of the principal industries and services. Where these index numbers are based on monthly returns collected from selected employers, the figures should be revised periodically as more representative information becomes available.

When a new series of statistics of employment or unemployment is first published, or is subsequently revised, it should be accompanied by a full explanation of the nature of the information utilized and the methods by which the statistics are compiled; in particular, each country should indicate any legislative or administrative changes which may effect the validity of comparisons of the figures for different periods.

### Wages and Hours of Labour

In each country of the Commonwealth details should be published regularly of the rates of wages fixed under the provisions of minimum wage legislation and of collective agreements between employers and workpeople. In the absence of such provisions, the rates of wages recognized by organizations of employers and workers for representative classes of workpeople should be published. Particulars of the normal weekly hours of labour for which these rates of wages are paid should also be given.

The particulars so published should be accompanied by such explanatory notes as may be necessary to indicate clearly the nature of the information given, attention being drawn to any qualifications of which account should be taken in using the figures for purposes of international comparisons.

In each country index numbers should be constructed and published at least annually, and preferably at quarterly or monthly intervals, showing the general course of weekly and hourly rates of wages as indicated by the changes in the rates of wages of a selection of the principal classes of workpeople for which data are available.

The range of industries and occupations in respect of which information is utilized for this purpose should be sufficiently wide to provide the most representative basis that can be secured, and the index numbers should be so constructed as to indicate the changes in the weighted average of the rates of wages of all the workers represented. It is desirable that separate group indices should be published, in particular those for agricultural workers and for industrial workers. Where practicable, separate indices should be given for males and females.

In view of the changes which may occur, over periods of several years, in the industrial distribution of the wage-earning population, the basis of the index numbers should be examined, and revised if necessary, at intervals of not more than ten years, and in order to facilitate comparisons between the figures for different countries it is particularly desirable that in those cases in which the weighting of the existing index numbers is based on a pre-war date, a new series should be constructed on a more recent basis.

In the construction of the index numbers account should be taken of the recommendations of the First Conference of Labour Statisticians, convened by the International Labour Office in October, 1923, and of the International Conferences of Statisticians convoked by the Social Science Research Council (U.S.A.), with the collaboration of the International Labour Office, in January, 1929, and May, 1930.

At annual intervals particulars should be published showing the average actual earnings and hours of labour, in a representative pay-week or other customary pay-period, of the workpeople

employed in each of the principal industries, based on information obtained from employers in those industries. At longer intervals more detailed information should be collected and published, showing for a representative pay-week or other customary pay-period the actual earnings and hours of labour of workpeople in each of the principal industries, classified by occupations and sex, and giving separate figures for adults and young persons.

In view of the fact that the lack of information relating to the numbers of wage-earners classified according to the amount of their weekly incomes constitutes one of the most marked deficiencies in the existing statistics of wages, those countries of the Commonwealth in which such information is not regularly obtained should consider the possibility of instituting enquiries, on the lines of those already undertaken periodically in certain countries, designed to provide particulars of the numbers of wage-earners in each of the principal industries, grouped according to the amount of their wages in a representative week or other customary pay-period.

### Retail Prices and Cost of Living

In each country of the Commonwealth, the general principles governing the maintenance and publication of records of retail prices and the construction and publication of index numbers showing the general movement of the cost of living should be those enunciated in the resolutions of the Statistical Conference of 1920, and in Article 2 VI of the Economic Statistics Convention.

The methods adopted in the construction of the index numbers should be in general conformity with the recommendations of the Second International Conference of Labour Statisticians, convened by the International Labour Office in April, 1925.

While the adoption of the same year in each country of the Commonwealth as the basis for the calculation of such index numbers may not yet be practicable, a closer approach to uniformity than is at present attained is necessary in order to ensure a full measure of comparability. With this objective in view, the basis of the index numbers should be revised, as recommended by the Statistical Conference of 1920, at intervals of, say ten years, and it is specially important that in those countries in which the index numbers are still based on a pre-war year the earliest opportunity should be taken to construct a new series on a more recent basis.

In view of the importance of information showing the distribution of family expenditure as between different commodities and services, as a basis both for index numbers measuring the changes in costs of living within any country and for comparisons of the relative costs of living in different countries, it is desirable that in those countries of the Commonwealth in which no family budget enquiries have been made during recent years such enquiries should be undertaken at the earliest possible date, on the lines laid down in the recommendations of the Third International Conference of Labour Statisticians, convened by the International Labour Office in October, 1926. The value of the information obtained will be greatly enhanced if arrangements are made, by consultation and co-operation between the statistical authorities of the countries concerned, to ensure that the enquiries are, so far as practicable, conducted on a uniform basis and during the same year.

### International Comparisons of Wages, Cost of Living, and Real Wages

The statistical authorities in each country of the Commonwealth should endeavour to co-operate as fully as possible with the International Labour Office in extending the publication of comparable data relating to wages, retail prices, and rents, by regularly furnishing the information on these subjects asked for in the annual enquiries made by that Office.

The Conference expresses the hope that the International Labour Office will continue its efforts to find a solution of the difficulties involved in the construction of index numbers showing the relative levels of wages, cost of living, and real wages in different countries. In the meantime it recommends that arrangements should be made, by the statistical authorities of those countries of the Commonwealth in which sufficient information is available, for the regular exchange of particulars relating to rates of wages of representative classes of workpeople, the retail prices of the principal commodities of working-class consumption, and rents of working-class dwellings, and for mutual consultation as to the value of these particulars for comparative purposes.

### Industrial Disputes

As regards the compilation and publication of statistics of industrial disputes, the Conference is in general agreement with the recommendations of the Third International Conference of Labour Statisticians.

### Industrial Accidents

It is desirable that the countries of the Commonwealth should collect and publish statistics of all fatal industrial accidents, and of all non-fatal industrial accidents of which particulars are obtainable, classified by industries. Where sufficient information is available, the recommendations of the First International Conference of Labour Statisticians should be kept in view in the compilation of the statistics.

### Road Transport Accidents

The subject of "Road Transport" including accidents due to highway traffic received lengthy consideration. The resolutions included the collection and compilation of statistics as to fatal and non-fatal accidents, with particulars as to the circumstances of their occurrence as follows:—

The Conference considers that statistics showing the circumstances in which fatal and non-fatal accidents occur and the causes of such accidents, are essential. Those statistics should include the following particulars:—

- (i) Nature of accident, e.g. collision between moving vehicles, collision between vehicle and pedestrian.
- (ii) Features of locality, e.g. cross roads, straight road, narrow bridge.
- (iii) Particulars of width of road, surface, and condition.
- (iv) Hour, day and month of occurrence.
- (v) Particulars of weather and light.
- (vi) Description of victim, e.g. pedestrian, driver of vehicle, pedal cyclist.
- (vii) Sex and age of victim.

- (viii) Condition of victim, e.g. infirm, ill, under influence of drink or drugs.
- (ix) Movements of pedestrian killed or injured, e.g. crossing road, alighting from vehicle, walking on footpath.
- (x) Type and condition of vehicle.
- (xi) Direction and speed of vehicle.
- (xii) Sex, age, experience, and condition of driver.
- (xiii) Sole or main cause of accident, and contributory causes (if any).

In countries where it is impracticable to record in such detail particulars of all accidents involving personal injury, the Confer-

ence recommends that returns should be compiled periodically and that investigations should relate to both fatal and non-fatal accidents.

The Conference registered its agreement with the conclusion adopted at the Seventh International Road Conference at Munich in September, 1934, that the provision of exhaustive statistics of accidents on a uniform basis in all countries is an urgent necessity in order to obtain greater success in the prevention of accidents.

According to a statement recently issued by the Industrial Accident Association of Ontario, there were 48,552 accidents reported to the Ontario Workmen's Compensation Board up to the end of October. These accidents involved payments of \$4,461,922.85 for compensation and medical aid to workers injured in Ontario industry. This is the direct accident cost to industry and constitutes, it is computed, only one-fifth of the total accident cost to industry. The other four-fifths, the indirect cost, includes such items as time lost by foremen, supervisors and executives in investigating accidents and assisting injured employees; training new employees; making out reports to the Workmen's Compensation Board; damage to machines, tools and other property; spoilage of material; interference with production; cost of first aid, welfare and benefit systems; interference with morale of other workers, etc.

In accordance with the provisions of the Nova Scotia Civil Service Act, 1935 (LABOUR GAZETTE, April, 1935, page 373), official announcement has been recently made of the appointment of a Civil Service Commission for the province. Professor Murray Macneill, M.A., was named commissioner.

The United States Public Health Service has recently issued a bulletin entitled "The Determination and Control of Industrial Dust." This survey includes sections dealing with such phases of the problem as: The quantification of industrial dusts; the instruments and methods used in the sampling of atmospheric industrial dusts; the determination of their character and composition; the application of dust determinations to practical problems; design of hoods and local exhaust systems; exhaust ventilation in practice; dust collection and disposal; measurement of air flow; and personal respiratory protection.

Among the recommendations contained in the report of the departmental committee on

the employment of discharged prisoners (Great Britain) were the following:

The establishment of a national council to co-ordinate "after-care" effort; re-instatement of the ex-prisoner in employment as the primary object of after-care work; and the substitution of supervision by an approved society instead of police supervision.

Approximately 400,000 bituminous coal miners received wage increases of about 10 per cent under the terms of an agreement signed by the United Mine Workers of America and the bituminous coal operators of the Appalachian area, according to an article appearing in the November issue of the *Labour Information Bulletin* (U.S. Department of Labour). The agreement went into effect on October 1, 1935. It involves directly about 300,000 miners employed in the bituminous fields of Pennsylvania, Maryland, Virginia, West Virginia, Tennessee, Kentucky, Ohio, and Michigan. An additional 100,000 workers are indirectly affected in other coal-producing areas where local contracts are based upon the Appalachian settlement. This agreement, effective until April 1, 1937, continues the long series of wage contracts in the bituminous-coal industry which have been negotiated through collective bargaining since 1898.

#### Industrial Accidents in Nova Scotia

According to the *Industrial Safety News*, official publication of the Nova Scotia Accident Prevention Association, there were a total of 5,599 accidents reported from the industries of the province for the nine months' period ending September 30, 1935.

During the same period of 1934 there were 4,724 accidents reported; an increase of 775 or approximately 16 per cent. These figures, however, do not include all accidents reported, as there is a considerable number of a minor nature reported each month, but if they do not result in more than one day's lost time no tabulation is made. All classes of industry in the province, with the exception of the Metal Trades Group, reported more accidents this year than in 1934.

## LEGISLATIVE RECOMMENDATIONS OF RAILWAY TRANSPORTATION BROTHERHOODS

**T**HE Railway Transportation Brotherhoods recently submitted programs of proposed legislation to the Dominion Government (on December 5) and the Ontario government (on November 29). In these presentations, the memorandum of the Brotherhoods was prepared and submitted by the Dominion Joint Legislative Committee and the Ontario Joint Legislative Committee, respectively.

The Dominion Committee of the Brotherhoods which presented the federal program to the Hon. C. D. Howe, Minister of Railways, and Hon. C. A. Dunning, Minister of Finance, comprised: Thomas Todd, Vice-president, Dominion Legislative Representative, Order of Railway Conductors; H. B. Chase, Assistant Grand Chief Engineer, Dominion Legislative Representative, Brotherhood of Locomotive Engineers; A. J. Kelly, Dominion Legislative Representative, Brotherhood of Railroad Trainmen; Wm. L. Best, Vice-president, National Legislative Representative, Brotherhood of Locomotive Firemen and Enginemen; W. H. Phillips, Vice-president, Order of Railroad Telegraphers; and W. V. Turnbull, Vice-president, Brotherhood of Maintenance of Way Employees.

In addition to Messrs. Best and Kelly, the Ontario Joint Legislative Committee which represented the Brotherhoods before the Ontario Cabinet were: J. T. Wilson, Chairman, Provincial Legislative Board, Brotherhood of Locomotive Engineers; A. H. Nethery, Chairman, provincial Legislative Board, Order of Railway Conductors; H. Walter, Chairman, Provincial Legislature Board, Brotherhood of Railroad Trainmen; and R. J. Tallon, Secretary-Treasurer, Trades and Labour Congress of Canada. They were received by the following members of the Cabinet: Hon. Harry Nixon, Provincial Secretary; Hon. Dr. Simpson, Minister of Education; Hon. Arthur Roebuck, Attorney-General; Hon. Peter Heenan, Minister of Northern Development; and Hon. Paul Leduc, Minister of Mines.

Featuring both presentations were the recommendations for specific amendments to the British North America Act, and also for the regulation of motor vehicle transport.

**British North America Act.**—With reference to the B.N.A. Act, the Brotherhoods urged the following amendments:

(a) To restrict the powers of the Senate to veto any bill passed by the House of Commons more than twice. This proposal is in harmony with the present practice of the Parliament of Great Britain;

(b) To broaden the scope or legislative competence of the Federal Parliament empowering it to enact social legislation of general interest and welfare to the people of Canada;

(c) To empower the Federal Parliament to deal effectively with the regulation of highway transport as a work for the general advantage of Canada, provided that Parliament has not already this power.

**Motor Transportation.**—In a comprehensive review of the factors relative to motor vehicle transport, the Brotherhoods re-affirmed their position on the matter that: "Any consideration given to ways and means for the control and regulation of competitive transport agencies the primary basis of that consideration must, in the public interest, presuppose a reliable transportation service. To be reliable such service must furnish the maximum standard of efficiency, particularly with regard to safety, convenience and dependability of accommodation, ensuring an uninterrupted scheduled service throughout every day of the year."

From this premise, the Brotherhoods argued that "any agency offering transportation facilities, either by air, land or water, constitutes itself a public utility and therefore should be subject to supervision, control and regulation by appropriate government authority."

It was urged that this authority, to be effective, should be national in its scope under a central body composed preferably of Dominion and provincial representatives. In this respect, the memorandum referred to the recommendations of the Royal Commission on Transportation. After an analysis of the total revenues derived from motor vehicle registration, gasoline tax, etc. in relation to the costs of highway construction and maintenance, the memorandum presented ten specific recommendations for the control and regulation of highway motor transportation. These included: supervision and administration by a commission (with powers similar to those exercised by the Board of Railway Commissioners for Canada); elimination of destructive competition caused by duplicating highway services; taxation of common highway carriers; guarantee of financial responsibility on part of owners; insistence on safety qualifications of operators; restrictions respecting tonnage; and enactment of legislation requiring reasonable standards of working conditions, hours and wages.

The Dominion memorandum requested certain amendments to the Railway Act, and

recommended an increase of from \$200,000 to \$500,000 annually in the Railway Grade Crossing Fund.

*St. Lawrence Deep Waterways.*—The Brotherhoods registered their opposition to the expenditure of public funds for the deepening of the St. Lawrence Waterways for transportation purposes. Among the reasons they advanced against the project were: that it is not justified by economic necessity; that it would adversely affect labour conditions in the railway industry in both Canada and the United States; that the present transportation facilities are adequate for many years; that any "alleged necessity for additional waterways is illusory"; that its construction would entail international complications; and that "the construction of the St. Lawrence shipway would contribute towards the breaking down of our present rail transportation system and would nullify the efforts made to protect our rail transportation system and the millions of its outstanding securities now held by financial institutions, insurance companies and individual citizens."

The memorandum also considered that "in view of the unfair competition of canal transportation with the steam railways" legislation should be enacted providing "adequate tolls" for all services through the canals.

*Unemployment Relief Measures.*—The Brotherhoods were "in accord with a policy by which municipal and provincial authorities shall assume responsibility for the initial action necessary to relieve existing human needs within their jurisdiction, to the full extent of their financial ability." But if these were unable to cope with current demands for direct relief then it was hoped that the Federal Government would continue the policy of furnishing the necessary financial assistance. However all such measures were regarded as "temporary expedients" and it was urged that "some scientific machinery be set in motion in an effort to discover the primary causes and related factors responsible for prevailing economic and industrial conditions." In this respect, it was suggested that the Economic Council might be utilized as a fact-finding body.

Other recommendations in the Dominion memorandum included the amending of the Old Age Pensions Act reducing the age qualification to sixty-five years and that the Dominion Government assume ninety per cent of the cost. A number of amendments were also sought in the Railway Act.

#### Memorandum of Provincial Legislation

As mentioned above, the memorandum dealing with proposed provincial legislation contained two sections which were also in the Dominion memorandum, namely those dealing with the British North America Act

and regulation of motor vehicle transportation.

With respect to the Highway Traffic Act, the Brotherhoods asked that measures be taken with a view to uniformity of traffic regulations with other provinces and also to provide a higher standard of qualifications for operators.

Commending the progress made by the province in the elimination of level crossings and the provisions for increased protection, the Brotherhoods requested a continuation of this policy.

As regards unemployment relief measures, the Brotherhoods' attitude was similar to that expressed in the Dominion memorandum.

It was also requested that the Mothers' Allowance Act be amended, reducing the resident qualification from two years to one.

Several amendments to the Workmen's Compensation Act were recommended. Among these were the following as outlined in the memorandum:

"Amend Section 1, subsection (2) to make clear the inclusion within the scope of the Act employees of municipal corporations, public utilities' commissions and any other commission having the management and conduct of any work or service owned by or operated for a municipal corporation, including hospitals, school boards and other public bodies.

"Amend Section 2 to provide for a broader and more liberal application thereof—(a) to ensure the payment of compensation for all injuries or diseases arising out of and in the course of employment, and (b) that an injury should not be regarded as attributable solely to the serious and wilful misconduct of the workman, unless it can be proven conclusively that the injury was the result of a wilful and intentional act on the part of the injured workman.

"Amend Section 17 to make it more clear that an employer shall not, either directly or indirectly, deduct from the wages of any of his workmen any part of any sum which the employer is or may become liable to pay to the workman as compensation under the Act, or to deduct from the wages of any of his workmen any amount by reason of such workman receiving compensation for a permanent partial disability.

"Amend Sections 20 and 21 to provide for the appointment of a medical committee of review to whom shall be referred disputed or contested claims involving the physical condition of an injured workman or his fitness to resume employment."

Average annual earnings of police-department employees in the United States ranged from \$1,293 to \$3,107 in 1934, according to a survey recently completed by the U.S. Bureau of Labor Statistics. The annual salary of patrolmen—the occupational group which comprised approximately three-fourths of the employees covered—averaged \$2,175. The average number of hours on duty per day for police-department employees during the year was between 8 and 9 in most of the important cities.

## LABOUR AND INDUSTRY IN NOVA SCOTIA IN 1933-34

### First Annual Report of the Provincial Department of Labour

A COMPREHENSIVE review of the industrial situation in Nova Scotia for the year ended September 30, 1934, is presented in the first annual report (recently received) of the Department of Labour of that province. This department was established under the Department of Labour Act passed during the 1934 session of the Legislature (LABOUR GAZETTE, August, 1934, page 748).

The report of the deputy minister indicated that general industrial conditions in the province improved during the fiscal year 1933-34, but that "due to lack of facilities and the absence of statistics dealing exclusively with Nova Scotia, it is impossible to give an accurate report."

In manufacturing, the greatest increase was in the steel-making, wood-working and textile industries, operations of the Sydney Steel Plant being in the vicinity of 65 per cent during 1934. In mining production, there was an increase of about 25 per cent, but this represented more of a change from part-time employment to full time rather than a correspondent increase in the number of workmen employed.

*Unemployment Relief.*—According to the report, the expenditure for unemployment relief reached its peak in December, 1933, with a total of \$184,466.86. This total was gradually reduced, and for September, 1934, the relief expenditure amounted to \$83,268.88. It was expected, however, that there would be a seasonal increase from September, 1934, to March, 1935. Gross expenditure for unemployment relief for the year 1934 totalled \$1,627,746.23, of which the municipal share was \$619,723.33, the balance being equally borne by the Province and the Dominion.

Touching on the general provincial situation with regard to relief matters and possible methods to cope with the problem, the deputy states:—

"The greatest decrease in relief expenditure during the past year is registered in the industrial and mining sections of the province, and is due to the elimination of relief payments to part-time workers, which ceased with a return to almost normal operations in industrial plants and collieries, but the continual heavy payments, even in these centres, is a problem which demands very serious consideration and thought for the future. The fact is that although industrial and mining production has resumed almost a normal volume, there still remains a large number in these com-

munities for which no employment is available. With an increase in mechanism in mines and industries, unless there is a great expansion in industry, these sections of the community are bound to become increased rather than decreased in the coming years, and their position, due to long periods of unemployment—in some cases running into years—will demand an increased relief allowance. The needs of partially unemployed, or workmen who have been out of work for short periods, are not as great for those who have been unemployed for long periods.

"The general prevailing system of Municipal borrowings for relief purposes was not originally intended for anything but an emergency condition, and for the problem of a permanent section of the population being totally unemployed for long periods, some other measure must be adopted. It would seem that this problem can be met in only one of three ways, viz.:

1. The adoption of contributory unemployment insurance.
2. Special taxation to defray the cost of relief.
3. Curtailment of working hours for those presently employed in industries.

"Contributory Unemployed Insurance would only care for those who are presently employed, or who can secure employment for a period long enough to qualify under such a scheme, as its weakness is that it makes no provision for the permanently unemployed or young people leaving school without the possibility of employment, and cannot relieve the situation in rural communities where the population is engaged in mixed occupations or casual employment."

During the year, the Department conducted investigations into eight-hour day legislation, and also into the operation of employees benefit societies in the province. It is understood that reports of these investigations have been made to the provincial Minister of Labour.

*Industrial Disputes.*—An analysis is given of the industrial disputes occurring in the province during the period under review. The particulars with respect to these disputes have already been published in the LABOUR GAZETTE.

*Employment Service.*—The annual report of the Nova Scotia Employment officers summarizes the administrative activities of the fiscal year 1934. It points out that "it

is almost impossible to analyze the statistics for 1934 on any basis of comparison with any other year in the history of the Employment Service except possibly 1933—due to the fact that offices which co-operated with Municipal Authorities in the placement of Relief Workers on a rotating basis, show a larger number of jobs filled than in other years." With this explanation, the report shows that the number of placements in 1934 totalled 13,993, of which number 2,984 were in regular, and approximately 11,000 in casual employment.

### Minimum Wage Board

Included in the report of the Department of Labour is the fourth annual report of the Minimum Wage Board, dealing with the administration of the Act during the year ended September 30, 1934.

During the past few years regulations of the Board were relaxed in several industries, but the statistical data in the report of the Board reflected the trend toward a return of salary deductions. The Board held three special conferences, investigated 281 complaints, and recovered a total of \$282.80 in arrears of wages for women workers.

A summary of all occupations under this Act makes the following comparison as between 1933 and 1934:—

—	1934	1933
Number of firms reported.....	141	152
Total number of employees.....	2,262	2,221
Total number of experienced.....	1,980	2,039
Total number of inexperienced.....	282	182
Total weekly wages paid.....	\$21,918.94	\$19,585.24
Total weekly wages paid experienced.....	20,237.39	18,154.02
Total weekly wages paid inexperienced workers.....	1,452.19	1,242.15
Total weekly wages paid girls under 18 years.....	229.36	189.07
Average weekly wages paid.....	9.69	8.82
Average weekly wages paid over 18 years.....	9.71	8.85
Average weekly wages paid under 18 years.....	9.17	6.09
Percentage of girls under 18 years..	1.1	1.3
Percentage of adults over 18 years..	98.9	98.7

The changes in average weekly wages in the various industries were as follows: Laundries and dyeing—increased from \$9.35 to \$10; confectionery and food trades—decreased from \$8.28 to \$8.19; hotels and restaurants—increased from \$7.36 to \$8.25; textiles, needle and leather trades—increased from \$9.14 to \$10.23; telephone operators—increased from \$10.73 to \$11.03; small factories, paper trades and printing—increased from \$11.82 to \$12.46.

A comparison of the average weekly hours worked in the various industries under the Act in 1933 and 1934 indicated the following: Laundries and dyeing—increased from 41.96 to 45.5; confectionery and food trades—increased from 42.5 to 42.6; hotels and restaurants—increased from 53 to 54; textiles, needle and leather trades—decreased from 53 to 48; telephone operators—48 hours (no change); small factories, paper trades and printing—increased from 43 to 47.

The chief details with respect to each industry under the Act during the year are summarized in the following paragraphs:—

*Laundries, Dye Works and Dry Cleaning.*—Number of firms, 15; number of women workers, 184 (experienced, 136; inexperienced, 48); time workers, 161; part-time workers, 23; girls under eighteen, 6; total weekly wages, \$1,840.37 (experienced, \$1,458.10; inexperienced, \$333.77; under eighteen, \$48.50); average weekly wage, \$10 (average over eighteen years, \$10.06; under eighteen years, \$8.92); percentage of young girls under 18 years, .6; percentage of adult workers over 18 years, 99.4; average weekly hours, 45.5.

*Confectioners, bakers and allied food trades.*—Number of firms, 9; number of women workers, 361 (experienced, 340; inexperienced, 21); number of time workers, 183; part-time workers, 5; piece workers, 173; girls under eighteen years, 5; total weekly wages, \$3,063.55 (experienced, \$2,941.05; inexperienced, \$91.40; under 18 years, \$31.10); average weekly wage, \$8.19 (over 18 years, \$8.60; under 18 years, \$6.22); percentage of girls over 18 years, 98.8; percentage of girls under 18 years, 1.2; average weekly hours, 42.6.

*Hotels, restaurants and tea rooms.*—Number of firms, 87; number of women workers, 553 (experienced, 489; inexperienced, 64); number of time workers, 540; part-time workers, 13; number of girls under 18 years, 11; total weekly wages paid, \$4,563.06 (experienced, \$4,253.46; inexperienced, \$242.25; under eighteen years, \$67.35); average weekly wage, \$8.25 (experienced adults, \$8.29; girls under 18 years, \$6.12); percentage of young girls under 18 years, 1.9; percentage of adults over 18 years, 98.1; average weekly hours, 54.

*Textiles, needle trades and leather trades.*—Number of firms, 10; number of women workers, 627 (experienced, 554; inexperienced, 73); number of time workers, 179; number of piece workers, 447; number of part-time workers, 1; girls under eighteen years, 3; total weekly wages, \$6,415.74 (experienced, \$5,975.16; inexperienced, \$358.17; under 18 years, \$82.41); average weekly wage, \$10.23 (adults over 18 years, \$10.78; girls under 18

years, \$6.17); percentage of young girls under 18 years, 2.4; percentage of adults over 18 years, 97.6; average weekly hours, 48.

*Telephone operators.*—No. of firms, 1; number of employees, 433 (experienced, 369; inexperienced, 64); time workers, 433; total weekly wages paid, \$4,777.64 (experienced, \$4,434.74; inexperienced, \$342.90); average weekly wages paid, \$11.03; percentage of adults over 18 years, 100; average weekly hours, 48.

*Small factories, paper trades and printing.*—Number of firms, 18; number of women

workers, 104 (experienced workers, 92; inexperienced, 12); time workers, 81; part-time workers, 12; piece workers, 11; total weekly wages paid \$1,258.58 (experienced, \$1,174.88; inexperienced, \$83.70); average weekly wages paid, \$12.46; percentage of adults over 18 years, 100; average weekly hours, 47.

The report gives the details with respect to its latest order (No. 7) governing female employees in shops and stores. This order was published in the LABOUR GAZETTE for June, 1934, page 532.

## LABOUR LEGISLATION IN NEW BRUNSWICK AND PRINCE EDWARD ISLAND IN 1935

THE New Brunswick Legislature, during the session which opened on February 14 and closed on April 4, 1935, enacted a law providing for housing commissions in municipalities and amended the acts relating to forest operations, workmen's compensation, and the franchise of persons on relief.

The New Brunswick Housing Commission Act, which came into force on proclamation, May 1, 1935, enables any municipal council to apply, by resolution, to the Lieutenant-Governor in Council for a Housing Commission to carry out the provisions of the Act within the municipality. Each Commission is to consist of five members, two appointed by the Lieutenant-Governor in Council, of whom one is to be chairman, and three appointed by the municipal council, of whom one is to be vice-chairman. Of the council appointees, one is to be representative of the council, one of the trades and labour interests and one of the real estate owners of the municipality. The amount of remuneration which the commissioners are to receive is to be fixed by the Lieutenant-Governor in Council.

A Commission may loan an amount not exceeding 80 per cent of the cost of construction to any person owning an unencumbered lot of land upon which a dwelling has been demolished by order of the Commission and which, in the opinion of the Commission, is suitable for the erection of a house. Plans and specifications must accompany the application and must satisfy minimum standards, and the circumstances of the district must be such that the construction of the house is deemed desirable. Each Commission is to be financed equally by the Lieutenant-Governor in Council and the municipality concerned, and the municipality is authorized to borrow, for purposes of the Act, sums not exceeding in the aggregate \$2.50 per capita of the population. The Prov-

ince may guarantee bonds issued by a municipality to finance its share.

A Commission has power to inspect buildings, determine standards and require the rehabilitation or repair of houses and the closing or demolition of those incapable of being repaired. A Commission may loan money, at its discretion, for such changes, supervise repairs and building, control the source or quality of materials and the labour to be supplied or preformed, and generally become responsible for the housing schemes undertaken. It may also determine the rentals to be paid, superintend financial operations until the loans made by it have been paid off, and make regulations governing various matters including the wages and building costs to be paid, the number of persons who may occupy a house which is let in apartments, lodgings or tenements, and the sanitation, ventilation and lighting of houses.

The New Brunswick Forest Operations Commission Act, 1934, which provided for a Commission to establish minimum wages and assist in the settlement of labour disputes in the lumbering industry, was amended in several respects. The definition of "employer" was extended to include the sub-contractor, the contractor and the principal for whom the work is undertaken, and also any person having control of or responsible directly or indirectly for the wages of an employee. The Act provided that application for the hearing of a dispute might be made by the employer or employees concerned. An amendment now provides that the Commission may consider a dispute to have arisen if it appears that the Act or the provisions of any wage scale established under it, are being violated or ignored by an employer, whether or not an application has been made by the employees for a hearing. These two

amendments are retroactive to August 1, 1934. Operations connected with Christmas trees and firewood are excluded from the scope of the Act.

An employer, party to a dispute, who fails to comply with the recommendations of the Commission for a settlement, is to be ordered on conviction, to pay the employee the difference between the wages paid him and the minimum wage set by the Commission. A written agreement under which workers who are inexperienced or physically unfit may be employed at a lower wage, must state definitely the extent of the employee's experience or the nature of the disability. Such agreement must be filed immediately with the Registrar and is not valid unless approved by the Commission. Notices prepared by the Commission summarizing the provisions of the Act, and the wage schedules fixed thereunder, must be kept posted by the employer in conspicuous places on his business premises under penalty of a fine of \$10 for each day of default.

A worker employed at a lower wage than that fixed by the Commission is entitled to claim the difference in a civil action. An order or regulation made by the Commission may be proved in any court by an authenticated copy purporting to be signed by the Registrar, and such copy is to be admitted in evidence without proof of the signature or of the truth of the statements contained in or attached to it, or of the official character of the person purporting to have made such signature and statement. All minimum wage scales established by the Commission before the passing of the amending Act (April 4, 1935) are declared valid.

Amendments to the Workmen's Compensation Act include a change in the definition of "average earnings" on which is based the amount of compensation payable. "Average earnings" are now to be calculated on the daily, weekly, monthly, or the regular remuneration which the workman was receiving at the time of the injury, or received previously, as may appear to the Board best to represent the actual loss of earnings suffered by the workman by reason of the injury. Formerly, average earnings were computed only on the weekly or monthly remuneration during the twelve months immediately preceding the accident, or in such manner as was best calculated to give the rate at which the workman was remunerated. The maximum amount of earnings that may be reckoned remains at \$1,500 per annum and the provision for taking into consideration a probable increase in earnings in the case of a workman under 21 years of age is unchanged.

Application for compensation may now be made within one year of the occurrence of the injury instead of six months, except in case of death where the time limit remains at six months from the time of death. A new clause provides that where it is made to appear to the Board that in the event of a matter previously decided by it being reconsidered, new evidence will be adduced substantially affecting the claim of the workman or his dependents, nothing in the section providing that the decision of the Board shall be final shall prevent the Board from reconsidering any matter previously dealt with or from rescinding, altering or amending any previous decision or order.

A further new clause provides that where a claim for compensation has been contested on the ground of the physical condition of the injured workman, such claim may be referred for review to a committee composed of three medical practitioners, one of whom is to be selected by the injured workman or by someone on his behalf, one by the employer and the third, who is the chairman, is to be chosen by the other two. If the members of such committee fail to agree on a third member within two weeks, the Board may appoint the third member. Such a committee is to have access to all files of the Board pertaining to the claim.

An Act to provide for the retaining of the franchise by persons in receipt of direct relief was amended to provide that, notwithstanding anything in the Election Act, no resident of a relief camp established under the Relief Act, 1933, of the Parliament of Canada, shall be disqualified during such residence because of absence from the electoral district in which he had a bona fide residence or was domiciled, from having his name placed upon the voters' list of that district, or from voting in any provincial election.

#### Prince Edward Island

The Legislature of Prince Edward Island, which opened on March 5 and closed on April 4, 1935, amended the Electrical Inspection Act to provide that if a public utility, consumer, person or firm engaged in the sale, installation, erection or use of electricity, hinders or interferes with an inspector in the performance of his duty, such public utility, person, etc., is liable, upon summary conviction, to a penalty of from \$10 to \$50 for each infraction. Such penalty may be recovered by distress and sale of the goods and chattels of the offender and, failing such goods and chattels upon which to levy, the offender may be imprisoned for a period not exceeding ten days. This penalty is similar to that imposed for a violation of the Act or any regulation made under its authority.

## REPORT OF THE INDUSTRIAL LEGISLATION COMMISSION OF SOUTH AFRICA

### Recommendations Respecting Arbitration, Conciliation, Industrial Agreements and Minimum Wages

A COMMISSION appointed July 19, 1924, to inquire into and report on the operation and administration of various statutes affecting labour and industry made its report on July 22, 1935, and this has now been issued.

The report, containing 181 pages, begins with a brief historical survey of industrial development and legislation, outlining the "catastrophic economic revolution" which occurred in a predominantly agricultural country following the discovery of diamonds and gold towards the end of the last century. Owing to the great scarcity of labour, not only were natives compelled to work for wages by the imposition of taxation but workers were brought from India, China, Mozambique and other parts of Africa. Workmen from Europe were attracted by the offer of relatively high wages for the skilled trades, with the result that standards of living for workers of European origin were considerably above the standards of the farmers and much higher than those of the natives and other workers of non-European origin.

After the early mining days, however, a surplus of native labour developed in the urban districts and also the scarcity of European labour disappeared and workmen of this class sought work not requiring skill competing for that formerly performed by natives and paid for at wages too low for the standards of living of people of European races. In addition workmen of non-European races began to rise into the skilled and semi-skilled groups.

The report contains tables of wage rates showing rates for the skilled classes from two shillings to three and one-half shillings per hour with rates for the semi-skilled at from one shilling to two shillings and for unskilled labour at four to eight pence. The commission pointed out that this wide disparity required serious consideration although some progress had been made in improving the rates for unskilled classes since 1925.

The disparity in wage scales for female and male labour is discussed, also the question of equal pay for equal work, it being pointed out that there is difficulty in determining "equal work" and that there is a tendency to employ women for the lower paid work, sometimes because it is lighter, also that men and women are rarely employed on identical work

and that men are displaced by women in work for which the latter are suitable.

"Every effort should, however, be made to adjust the wages of women in relation to those of men so as to correspond as nearly as can be with the net value of their services. This would remove any inducement to displace men by women merely because of relative wage rates, a practice which unfortunately has gained ground in certain industries with detrimental social effects."

Comparisons of wage rates and earnings with the cost of living are made, the result being stated as follows: "Notwithstanding the lack of information regarding actual earnings and living expenses, we are nevertheless of the opinion that if by 'adequacy' is meant wages sufficient to enable unskilled and semi-skilled workers to maintain standards of living generally regarded as decent, the wages of many such workers, and in particular of the unskilled, must be considered as inadequate. Large numbers of persons of all races are compelled to eke out an existence on bare subsistence standards, and under present conditions have no prospects of improving their position."

#### Systems of Wage Fixing

Two systems of wage fixing under legislation in South Africa are described, the voluntary system under the Industrial Conciliation Act intended for organized industries and trades and the compulsory system intended primarily for unorganized industries and trades.

The Industrial Conciliation Act, 1924, amended in 1930 and 1933, for the prevention and settlement of disputes by conciliation provides for the establishment of industrial councils by agreement between registered employers' associations and trade unions. An individual employer may agree with a trade union to establish a council if there is no organization of employers. For industries in which councils cannot be established or maintained provision is made for the setting up of conciliation boards to deal with particular disputes.

The Act applies to all industries except agriculture and government employment with certain exceptions. Employers' organizations and trade unions, to be registered, must comply with the rules as to their constitu-

tions, functions, representative character, etc. When the Minister of Labour is satisfied that an agreement as to wages and working conditions has been reached by an industrial council which is sufficiently representative of the industry, he may, on application declare it obligatory on all employers and employees in the industry, with liability to prosecution and fine or imprisonment for infraction.

A conciliation board may be established by the Minister on application of either party to a dispute, and he may appoint a member if either party fails to do so. If a settlement is effected, the Minister may give the agreement the force of law. The Minister may also appoint mediators or arbitrators on application of the parties to a dispute or without such application. Arbitration is compulsory in the case of public utilities. Strikes and lockouts are unlawful until a dispute has been dealt with by an industrial council or by a conciliation board or during the existence of an agreement which has been given the force of law. A strike or lockout in connection with essential services is definitely prohibited.

The Department of Labour assists registered bodies with advice and assists in the formation of trade unions and employers' organizations and in the establishment of councils. The Department has issued a Handbook for organizations designed to bring about uniformity in procedure and containing information on a large variety of subjects of interest to such organizations and bodies, including specimen constitutions and agreements. The Commission commended this procedure as a means of guiding employers and workers through the intricacies of the law.

The Commission ascertained that this voluntary system of regulating wages was preferred except by those trade unions which considered themselves not sufficiently powerful to bargain effectively with their employers and by the Association of Chambers of Commerce of South Africa which held that the system under the Wage Act was preferable for regulation of commerce. The Commission commended the system as affording not only an opportunity for the parties directly concerned to determine matters of mutual interest but for the constant exchange of views in cases where industrial councils have been established. Another advantage pointed out is that the enforcement of an agreement is in a council's own hands in so far as its own members are concerned.

The Commission quoted statistics showing that strikes and lockouts had been greatly

reduced since the enactment of the law in 1924, time loss in the period 1924-1928 being 31,000 man days, in 1929-1933 100,000 days as compared with 2,830,000 days in 1919-1923.

The Commission reported that the trade unions objected to compulsory arbitration, holding that arbitrators in a majority of cases were not sympathetic with labour but would probably change this view if the statute provided that "trade union people or people who have been brought up among the workers, who understand the conditions of the workers" were to be arbitrators. The unions also objected to the prohibition of strikes in essential services and to the postponing of strikes in disputes under investigation. The Commission did not support these objections but considered "that a *prima facie* case had been made for the continuance of the exercise of the greatest care in the appointment of impartial and respected persons as arbitrators." It also recommended certain changes in the law respecting arbitrators.

In discussing organization of employers and trade unions the Commission quoted a section of a recent report of the Secretary of Labour stating that where the terms of an industrial council agreement had been made obligatory on all employers and workers in an industry it was difficult for the Department to enforce it if the parties to the agreement were not sufficiently representative of all in the industry. The Commission stated that it is now generally recognized that the trade union movement is an indispensable part of the social structure and that many employers encouraged their employees to join unions; also that the better type of employer recognizes that a well organized and well disciplined union can do much to reduce evasion of industrial legislation by eradicating collusion between employees and the less reputable type of employer.

In discussing the extension to all employers and workers in an industry of the terms of an agreement, the Commission pointed out that the Minister should not take this responsibility until he has satisfied himself by the fullest inquiry that it is in the interest of the industry as a whole, and not merely of the parties entering into it, at the expense of others; also that the government should survey conditions from time to time in all industries in which industrial councils function.

### Wage Boards

The Wage Act, 1925, applies to all industries except agriculture, domestic service, employees in the public service or railway and harbour service whose wages are governed by statute or regulations, apprentices under

the Apprenticeship Act, 1922, and employers and employees already bound by terms of agreements under the Industrial Conciliation Act, 1924, while so bound. A Wage Board of three members is appointed by the Governor General in Council. Divisions of the Board, each consisting of three members, one of whom is a member of the Board, may be appointed by the government to investigate and report to the Board on any particular trade or section of a trade. The Board may make recommendations to the Minister of Labour on minimum wages for any trade, on ascending scales of wages, for juveniles and unqualified adults, the trades or occupations in which it shall not be lawful to employ persons under the age of fourteen years, and on any other matter affecting wages, hours or conditions of employment. The Minister, after publication in the "Gazette" and in one or more newspapers, and after affording opportunity for objection within thirty days, may make a final "determination," with any alterations recommended by the Board in the light of objections, to be in force for a specified period of not more than two years, but to be in force until a new determination has been made. A determination may be suspended, cancelled or superseded on the recommendation of the Board. Failure to comply with the terms of a determination is a criminal offence and punishable by fine not exceeding one hundred pounds sterling and the court may order that the amount of wages underpaid over a period not exceeding one year be paid into the treasury, and may further order that the whole of such amount or a part not less than one-quarter may be paid to the employee concerned.

The Commission considered representations as to the membership of Boards but recommended that the Wage Board should consist of not less than three permanent members and that one should be an experienced official of the Department of Labour, one with a training in economics and one with practical experience in commerce or industry. It also stated that the state can provide only a reasonably adequate inspectorate, that it was the duty of employers' organizations and trade unions to assist to the best of their ability and further that the responsibility of the government was greater in industries not having such organizations. The Commission also found that a close inquiry should be made as to the adequacy of the inspection staff and that additional instruments of regulation should not be made until it was ascertained that the additional inspection work involved could be done. The desirability of appointing women as inspectors was also urged for consideration. It was recommended

that when general evasion of regulations was discovered careful inquiry should be made into the conditions of the trade in question with a view to remedies. Various measures to prevent and punish evasions were recommended, including not only adequate inspection but a revision of penalties, the imposition of imprisonment, cancellation of licences to do business, and changes in the law as to the courts ordering payment of wages. While agreeing that collusion on the part of employees in evasion should debar them from the right to take civil action for wages unpaid, it was recommended that they should be able to secure leave to do so from the courts. The practice of assigning cases under industrial legislation to magistrates and prosecutors with special experience in such cases was commended and its extension recommended.

---

In reporting on the Apprenticeship Act, 1922, which in many respects is similar to the Ontario Apprenticeship Act but applies to other industries than building, the Commission recommended that the apprenticeship committees in the various industries should take the greatest care in selecting minors and in passing on the applications of employers; that the latter should be urged to assign to specially qualified journeymen the task of ensuring that apprentices receive a proper training, that a system of practical tests should be taken after the first year and that the contract of apprenticeship should be cancelled by the Inspector of Apprenticeship if the apprentice was not making reasonable progress or if the employer was not giving efficient training. It was also recommended that the list of designated trades to which the Act applies should be reviewed with a view to eliminating those in which apprenticeship can no longer be justified or to reducing the periods of training when the necessary skill can be acquired in shorter periods. Reviews of this sort are considered to be necessary from time to time.

---

After September 1, 1935 "any and all occupational diseases" contracted by workmen in the New York State are subject to compensation. According to a publication issued by the New York State Department of Labour "the extension of the scope of the Workmen's Compensation Law is based on the fact that many poisonous substances are used in industry that should be controlled and it is to the benefit of the individual as well as of the State that health should be maintained during the course of work." To enable employers to reach more hygienic standards, the department has created the Division of Industrial Hygiene.

## INTERSTATE LABOUR COMPACTS IN THE UNITED STATES

AN interesting method has been devised in the United States for the attainment of uniform labour standards in different states of the Union. As in Canada, the federal legislative authority has no power to pass laws regulating the employment of women and children or the wages, hours of labour and other working conditions in the manufacturing and mercantile industries of the states. Legislative action on these matters is reserved under the Constitution to the states.

The United States Constitution, however, provides

No state shall, without the consent of Congress . . . enter into any agreement or compact with another state . . .

The method of interstate compacts has been utilized in the United States in the past for the settlement of boundary questions, control of waterways and in cases of overlapping jurisdiction in matters relating to crime and taxation. Before a compact between two or more states may become effective, the consent of Congress must be obtained. At the 1934 and 1935 sessions of Congress, a resolution authorizing "the several states to negotiate compacts or agreements to promote greater uniformity in the laws of such states affecting labour and industries," was approved by the House of Representatives but has not yet been passed by the Senate. The resolution stipulates that no compact shall bind any state which is a party to it until it has been approved by the legislature of each of the states signing the compact and by Congress.

The first step in the movement towards interstate labour compacts was taken in January, 1931, when the then Governor of New York State, now the President of the United States, called a conference of Governors of seven north-eastern states to consider unemployment and other industrial problems. At this conference, it was agreed to call a meeting of officials of the state labour departments in the east central section of the United States to study the differences in the various state labour laws and to consider the possibility of uniform provisions. In June, 1931, labour officials from Delaware, Maryland and West Virginia as well as from Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Ohio and from the United States Department of Labour, met at Harrisburg, Pa. Recommendations made at this conference dealt with state laws on workmen's compensation,

employment offices, employment of women and children and industrial hygiene. In January, 1933, a conference of labour officials of nine states was held at Boston. In addition to recommendations concerning legislation on the employment of women and young persons, a motion was adopted to request the Governors of the states concerned to give consideration to the holding of an annual interstate meeting prior to the sessions of the legislatures.

In April, following this meeting, the Massachusetts Legislature authorized a State Commission on Interstate Compacts

to meet with like Commissions . . . of New York, Rhode Island, Connecticut, Vermont, New Hampshire, Maine, Pennsylvania and New Jersey, or any of them, for the purpose of negotiating or agreeing upon a joint report. Said report shall recommend to the legislatures of the participating states a policy to be pursued by such states with reference to the establishment of uniform wages, hours of labour and conditions and standards of employment by the enactment of such legislation by such states as will constitute an interstate compact.

Members of the Commission serve without remuneration but are paid the expenses incurred in the performance of their duties. Since that date, similar commissions have been set up in Vermont, New Hampshire, Connecticut, New York and New Jersey.

With the organization of the Massachusetts Commission and the endorsement of the system of state commissions on interstate compacts at a conference of New England Governors in October, 1933, a more formal character was given to the meeting of labour officials on interstate compacts. The first meeting of the Interstate Conference on Labour Compacts, as the organization was now called, was held in Boston on December 5, 1933, when representatives were present from Connecticut, Massachusetts, New Hampshire, Rhode Island and Vermont. Subjects agreed on for future discussion with a view to uniform legislation, were child labour, minimum wages, hours of labour and home work. It was decided that the word "uniform" should not be taken to mean absolutely identical legislation but merely action by the several states that would produce substantial uniformity in results.

### Minimum Wages

At the sixth session of the Conference on May 29, 1934, at Concord, N.H., an agreement was reached on the text of a Minimum Wage Compact. Representatives were pres-

ent from Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York and Pennsylvania, together with a representative of the United States Department of Labour. When the compact was signed, the Chairman, Senator Henry Parkman, Jr., of Massachusetts, pointed out that

state co-operation through compacts is a significant development in the field of government as well as in the field of social legislation. It is beyond the capacity of the federal government to regulate the life of the people of so large a nation in every detail. A successful agreement of states to work together is consequently a safeguard not only to the state governments but also to the national government itself.

The Minimum Wage Compact contains certain standard provisions regarding policy and enforcement which it is proposed to include in all subsequent compacts. When a compact is signed by the representatives of the states assembled in conference, it must be ratified by the respective legislatures. On ratification by the requisite number of states as specified in the compact and with the consent of Congress, the compact becomes effective in these states. The necessary legislation to establish and maintain the minimum standards set out in the compact must, then, be enacted by the legislature and provision made for its enforcement and supervision. Any state wishing to withdraw from a compact must submit its reasons to the Interstate Commission set up to supervise the administration of the compact and must give six months' notice to allow the Commission to make recommendations on the matter. Two years must elapse, under the terms of the compact, before any state can finally withdraw from the obligations it has assumed. The Interstate Commission is to be composed of the chairmen of the various state commissions in the states that have ratified the compact together with a representative of the Federal Government. The powers of the Interstate Commission are limited to investigations, recommendations and publication of its findings on questions or complaints regarding the administration of the compact and requests for its modification or for permission to withdraw.

The Minimum Wage Compact, which was to come into force when ratified by two or more states, prohibits the employment of women and minors under twenty-one years of age at unfair and oppressive wages. Wages of these classes are required to be investigated in order to determine fair wage-rates and directory orders may be made based on the findings of wage-boards made up of representatives of employers, employees and the

public. After a directory order has been in effect for a specified time, the order may be made mandatory. This method was adopted in order to meet the constitutional difficulties revealed by the judgment of the United States Supreme Court in declaring unconstitutional the minimum wage law of the District of Columbia which based the minimum wage on the cost of living. The standard bill drafted by the Interstate Conference takes the form rather of a prohibition against an unfair and oppressive wage.\* The Committee on the Minimum Wage Compact reported to the Interstate Conference in June, 1935, that the compact had been ratified by the Massachusetts and New Hampshire Legislatures. Massachusetts had also enacted the fair wage legislation necessary to meet the Compact standards. In New York, New Hampshire, New Jersey, Connecticut, Illinois and Ohio, minimum wage laws conforming to the standards set by the compact were enacted in 1933.

### Child Labour

Another subject that has received considerable attention from the Interstate Conference on Labour Compacts is that of child labour. When the Federal Child Labour Law of 1919 was declared unconstitutional by the Supreme Court of the United States, it was proposed that an amendment be made to the Constitution of the United States empowering Congress to prohibit and regulate the labour of persons under eighteen years of age while reserving to the states their powers in this field except in so far as is necessary to give effect to legislation enacted by Congress. An amendment to this effect was submitted to Congress by the states in June, 1924. Before an amendment to the Constitution can be made, however, ratification of it by two-thirds of the states is necessary. By October, 1935, twenty-four states had ratified the Federal Child Labour Amendment. Ratification by twelve more states is required.

At the second meeting of the Interstate Conference on Labour Compacts in January, 1934, the question of child labour legislation was taken up and the provisions of a proposed compact discussed. It was recommended by the Conference, however, that the several state commissions should urge the immediate ratification of the Child Labour Amendment on the states that had not already ratified it. Discussion on the form

\*The text of the Minimum Wage Compact was published in the LABOUR GAZETTE for September, 1934, p. 838. Changes in the model Bill were made at the sixteenth session at Albany on October 18-19, 1935.

and extent of a Child Labour Compact continued until the ninth meeting in November, 1934, when it was decided to defer further discussion in view of the wider action that would be made possible by the ratification of the Child Labour Amendment and in view of the fact that the question of ratification would come before a large number of state legislatures within the ensuing few months. In April, 1935, however, discussion on the Child Labour Compact was revived. It was pointed out at the Conference in June, 1935, that the Compact deals primarily with interstate matters, that it does not cover the whole field of child labour, that it is not to be interpreted as taking the place of either state or federal child labour legislation. The draft compact as approved at this meeting prohibits the employment of children under sixteen years of age in manufacturing or mechanical establishments, in building trades or in mines or quarries. Persons under eighteen years of age employed in such workplaces must have employment certificates with proof of age, health and promise of employment. No person under eighteen in such industries may be employed in occupations deemed hazardous by the state authorities or be employed between the hours of 10 p.m. and 6 a.m. Persons under eighteen in these industries may not work more than eight hours in any one day or more than forty hours a week or on more than six days in a week. It is stipulated that the Compact shall come into effect in the states ratifying it upon the ratification of two or more states.

At the meeting of the American Federation of Labour in October, 1935, opposition to the work of the Interstate Conference on Labour Compacts with regard to child labour was expressed on the ground that it interfered with the progress towards ratification of the Child Labour Amendment. On this account, it was decided at the sixteenth meeting of the Conference at Albany in October, 1935, to seek the co-operation of the American Federation of Labour and the state federations of labour while giving further consideration to the Child Labour Compact.

### Hours of Labour

A draft Compact on hours of labour was approved at the session of the Conference in October, 1935, and referred to the various states for consideration with a view to signing at the next session of the Conference. This draft was arrived at after various revisions and consultation with industrial and labour organizations and state Departments of Labour. It is stipulated that the Compact shall come into effect when ratified by

fifteen states. It provides that no person shall be employed in a manufacturing, mechanical or canning establishment or in a mining, quarrying or construction enterprise for more than forty hours a week or for more than eight hours a day or during a period of more than ten consecutive hours in any twenty-four or on more than six days a week. Exemption is provided for mechanical establishments employing not more than three persons and for persons occupying supervisory or managerial positions or engaged in professional work or as outside salesmen. Persons employed in maintenance or repair work are also exempt but may not be employed for more than forty-eight hours a week. Persons employed as watchmen or firemen may be employed up to fifty-six hours a week. Provision is made also for emergencies when a punitive rate must be paid for overtime, for peak loads and for times of labour shortage. In these three cases it is proposed that the state authorities shall make regulations to insure the effective operation of the Act.

### Permanent Organization

A committee on permanent organization has been appointed to recommend methods of financing the Conference and furthering its work among other states. Representatives from the United States Department of Labour have been present at all sessions of the Conference and have participated in the discussion. Co-operation with other organizations has also been sought. Among these are the National Consumers' League, the American Association for Labour Legislation, the American Legislators' Association and the Conference of Commissioners on Uniform State Laws. The last-named organization, on the suggestion of the Interstate Conference, appointed a Standing Committee on Interstate Compacts in 1934.

A National Conference for Labour Legislation was called by the Secretary of Labour to meet in Washington, February, 1934. At this Conference the following resolution was adopted:—

Whereas, The industrial competition between States makes desirable substantial uniformity of labor laws among competitive States; be it Resolved,

1. That there be regular contact between labor department officials, representatives of employers, representatives of workers and of the public of competing States for the purpose of discussing and proposing labor laws which will tend to raise and unify standards for the States participating in such conferences.

2. That such conferences include representatives of the Federal Department of Labor.

3. That such conferences be held semi-annually on a regional basis.

4. That such conferences consider the adoption of interstate compacts providing for uniform labor legislation or any other practical devices to achieve this object.

5. That the Secretary of Labor appoint both a permanent secretary and a standing committee to work with her in the preparation of a definite plan for the establishment of such regional conferences and co-ordination of effort among them.

A further step was taken by the United States Department of Labour in arranging a conference in December, 1934, between national organizations and the Division of Labour Standards of the United States Department of Labour with the view of promoting higher standards for the protection of workers in the different states. Representatives of state departments of labour were present as well as delegates from numerous civic, religious, patriotic and welfare organi-

zations. The Conference approved resolutions in favour of the forty-hour week, eight-hour day and five-day week, minimum wage laws for women and minors, ratification of the Child Labour Amendment and the raising of standards of child labour legislation in states which have ratified the Amendment, the elimination of home-work, unemployment insurance legislation, old age pensions and improvement in the administration of state labour laws.

In January, 1935, a Regional Conference on Labour Standards and Economic Security was held in Nashville, Tennessee, at which representatives of nine of the southeastern states were present. All these conferences indicate the interest being taken in the formulating by agreement of labour standards for incorporation in the statutes of the various states.

## BITUMINOUS COAL CODE IN UNITED STATES

### Provides for Price Determination and Labour Regulations

REFERENCE was made in the LABOUR GAZETTE for October, page 887, to the Bituminous Coal Conservation Act enacted at the last session of the United States Congress for the purpose of establishing the bituminous coal mining industry, and to protect the right of mine workers to organize and bargain collectively. The National Bituminous Coal Commission has recently issued three orders to bring the bituminous coal industry under federal regulation. The first of these orders promulgates the Bituminous Coal Code; the second provides the form of acceptance of membership on the part of producers, while the third sets forth the organization of the district boards.

The Bituminous Coal Code is in conformity with the Bituminous Coal Conservation Act, and contains sections dealing with such matters as unfair methods of competition, minimum-price arrears, marketing arrangements, and labour provisions.

The Commission administering the Act is composed of five members holding office for a term of four years at \$10,000 per annum. The consuming public is represented by a Consumers' Counsel at \$10,000 per year, and the cost of administration is met by assessment of producing members on a tonnage basis.

The twenty-three districts comprising the producing area of the country are to be administered by district boards (3 to 17 members) on which marketing agencies may secure representation by application to the Commission, the number of board members

being determined by majority vote of district tonnage for the calendar year 1934. Employee representation is limited to one member, the remaining members (an even number) to be producers, members serving for two years.

An excise tax of 15 per cent of sale price at mine is applied on all bituminous coal mined in the United States, the tax in the case of captive coal (coal consumed by the producer or by concerns which are subsidiaries of the producer) to apply on fair market value at mine as determined by the Commissioner of Internal Revenue on the basis of current market price for comparable coal. Code members are allowed a drawback of 90 per cent of the amount of the tax which is payable monthly.

*Price Regulation.*—For each mine the district board is to establish minimum f.o.b. prices, which, when approved by the Commission, become binding upon producer code members, prices being based upon weighted average cost of coal produced within the district in 1934 and adjusted to reflect subsequent changes to date of determination. The minimum prices will not apply to coal sold by a code member and shipped to Canada. The Commission is also authorized to determine maximum prices f.o.b. mine in any district as a protection to consumers against unreasonably high prices, these prices being fixed on the basis of a uniform increase over the minimum prices in effect at the time, the amount of increase being adjusted to provide a reasonable return over average total cost.

Maximum prices are not to apply on export coal shipped from continental United States.

**Labour Provisions.**—Labour provisions of the code are binding upon district boards and code members. Employees are to have the right to organize and bargain collectively through members of their own choosing, be free from restraint, or coercion of employers, to have the right of peaceable assemblage for discussion of collective bargains, to be free to join or refrain from joining any labour organization as a condition of employment, to select their own check-weighmen and inspect weighing and measuring of coal. Living in company houses or trading at company stores may not be required as a condition of employment. Hours of labour

agreed upon by contracts between producers of more than two-thirds of the annual tonnage and one-half of the workers employed, are to be accepted by all code members. This same ratio applies as to wage agreements, which are to be filed with the Bituminous Labour Board and accepted by code members as minimum wages for classifications covered by agreements. This Board, which is assigned to the Department of Labour, can hold elections to determine who are employees' representatives, offer its services as mediator, and upon written submission of a controversy, act as arbitrator. The Board has three members, named by the President, with representation for producers and for labour and an impartial chairman.

### Accidents on Electric Railways

There were four passengers, two employees and 49 other persons killed in accidents on Canadian electric railways in 1934, according to information recently published by the Dominion Bureau of Statistics. This total of 55 was an increase of 22 persons or 67 per cent over the 1933 total but it was smaller than the total of any other year since 1925. The 49 other persons included 26 pedestrians, 21 motorists and 2 others.

The number of persons injured amounted to 2,680, which was the smallest number since 1921. Those included 1,602 passengers, 443 pedestrians, 207 motorists, 65 occupants of other vehicles, 101 conductors and motormen, 20 bus operators, 134 other employees and 108 other persons.

An analysis of the classes of vehicles involved in these accidents shows the following averages per million miles run: buses, 0.2933 persons killed and 20.416 injured; one-man cars, 0.5242 persons killed and 16.180 injured; cars operated by two men, 0.3934 persons killed and 28.039 injured. The bus mileage includes a small amount made by buses with two men in charge. Usually the heavy runs with dense street traffic are assigned to cars operated by two men on systems operating both classes of car and this would have an effect on the number of accidents per mile run. The injuries are not classified into major and minor, and consequently must be considered as approximately the same each year. It is pointed out that it would be a mistake to consider the operators of electric cars and buses operated by the electric railway companies as responsible for all those accidents, but they were involved in them. Also several years' records

should be analysed before conclusions are drawn as to the relative safety of each class of vehicle.

High silicosis and tuberculosis rates were found among a group of anthracite miners examined in different sections of the anthracite field in Pennsylvania in a study of anthracite silicosis made by the United States Public Health Service. Physical examinations of 2,711 active workers showed that 616, or 22.7 per cent, had anthracite silicosis, 106 being in the more advanced stages of the disease. Tuberculosis as a complication was found in 124 cases. The disease developed most rapidly in workers exposed to high concentrations of the dust, about 13 per cent of the rock workers being in the first stage of anthracite silicosis when the working period was less than 15 years, while 9 out of 10 of these workers who had been employed more than 25 years had the disease.

A scheme of land settlement for the unemployed in Great Britain this year, was announced recently by the Prime Minister, the Right Hon. J. Ramsay MacDonald. It is proposed to settle about 18,000 families, taken from special areas, in groups of 150 to 200, on small holdings each between three and five acres in extent. Instructors in the production of market garden crops, pigs and poultry will be provided for each group. The men will build their own houses during the first year, they and their families continuing to receive unemployment benefits during that time; and the government will provide land and materials and all necessary equipment. According to estimates in the London *Daily Telegraph* the cost of the scheme will be about \$375 per settler, and it is stated that \$50,000,000 will be appropriated for the undertaking in England, and \$20,000,000 in Scotland.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### The Forty-Hour Week

Last June the International Labour Conference adopted a Convention on the principle of the forty-hour week without a lowering of the standard of living of the workers. The application of this principle to various industries was to be laid down in separate Conventions containing detailed provisions.

Immediately after this general decision, the Conference adopted a first Convention covering the glass-bottle industry. Then it placed the question of similar Conventions for public works, building and contracting, the iron and steel industry, and coal mines on the agenda of the 1936 session of the Conference.

At the same time, the Conference requested the Governing Body to study the possibility of also placing on the agenda of the 1936 session the questions of reduction of hours of work in the textile and chemical industries and in the printing and bookbinding trades.

When the matter came up for discussion by the Governing Body at its seventy-third session in October, the Chairman of the Employers' Group opposed the placing of the reduction of hours of work, in any of these industries on the agenda of the 1936 Conference. He pointed out that most of the Employers' Group were opposed to the principle of the forty-hour week, and argued that the agenda for the 1936 Conference already was overloaded and that additional items might militate against the success of the Conference.

Mr. Hayday (Workers, Great Britain), insisted upon the reduction of hours of work in the textile industry, as it was among those industries that best lent themselves to such a measure.

The British Government representative held, on the contrary, that it would be premature to place this question on the 1936 agenda. He maintained that, before being discussed internationally, the problem should be subjected to a more detailed study in the countries concerned.

The French Government and Workers' representatives both supported Mr. Hayday's proposal. The United States Government representative said his country was greatly interested in reduction of hours of work in the textile industry. He urged that the question be dealt with in 1936 in such a manner that one or several Conventions could be adopted.

The Japanese Government representative stressed the differences in conditions in the

textile industry obtaining in various countries. However, he would not oppose the proposal to place the subject on the 1936 agenda. The Italian Employers' representative spoke in favour of placing the question on the agenda for 1936, and by 17 votes to 6 the Governing Body so decided.

A discussion took place later as to whether the industry should be treated as a whole or in the following three divisions: (1) wool and cotton, (2) silk and artificial silk, (3) linen, jute and hemp. The decision was in favour of the former alternative.

Separate reports have been issued by the International Labour Office in connection with the proposals for reduction of hours of work, with special reference to: (a) public works undertaken or subsidized by Government; (b) iron and steel; (c) building and contracting; (d) glass-bottle manufacture; and (e) coal mines.

### Reports on Matters Affecting Seamen

The International Labour Office published two reports for submission to the Preparatory Maritime Conference which was held in Geneva in November 1935. One of these deals with Hours of Work on Board Ship and Manning, and the other with Holidays with Pay for Seamen.

At its meeting in April 1935, the Governing Body of the International Labour Office decided to add the question of manning to the agenda of the next special Seamen's Session of the Conference, with a view to examination of the problem of hours of work on board ship and manning as a whole; to refer the question of manning in conjunction with hours of work on board ship to a preparatory tripartite meeting of the principal maritime countries to be held in November 1935; and to hold the next Seamen's Session of the Conference in the autumn of 1936, not only for the second discussion of the four questions standing over from 1929 but also with a view to final decision on the new question of manning. It was also decided to adopt the same procedure with regard to the question of holidays with pay for seamen.

The above-mentioned reports contain comparative analyses of the law and practice in the individual countries, together with conclusions and suggestions intended to serve as a basis for discussion. There are a proposed Draft Convention and Recommendations concerning the regulation of hours of work on board ship, and suggestions as to the points which might be covered by Conference decisions on the subjects of manning and holidays with pay.

### Ratifications by Chile

The Government of Chile, which had previously ratified nineteen Conventions of the International Labour Conference, notified the Secretariat of the League of Nations on October 18th of the formal ratification of fourteen additional Conventions passed at various sessions of the Conference between 1920 and 1933, thus bringing the total number of ratifications by Chile up to thirty-three.

The foregoing is of particular interest in connection with the proposed regional conference which is to be held under the auspices of the International Labour Body in Santiago de Chile opening on January 2, 1936, and in which all of the countries of North, Central and South America have been invited to participate.

### Correspondence Committee on Industrial Hygiene

The ninth session of the Correspondence Committee on Industrial Hygiene was held in the International Labour Office from October 28 to 30, 1935, and was attended by medical experts from Austria, Belgium, Czechoslovakia, Denmark, France, Great Britain, Italy and the Netherlands. An expert from the United States had been invited but was unable to be present.

The agenda included the following questions: extension of the list of occupational diseases involving the right to compensation (asbestosis, various kinds of poisoning and skin diseases), work in caissons and labelling of containers of toxic products. The Danish expert submitted to the Committee a proposal by the Government of Denmark for international co-operation in the study of diseases caused by dust, with special reference to silicosis.

The Committee adopted several resolutions on these points which will be submitted to the Governing Body.

### Japanese Employers and the I.L.O.

Before his return to Japan, the Japanese employers' delegate to the Nineteenth Session of the International Labour Conference (1925), sent to the National Confederation of Industrial Associations a message giving his impressions of the session.

"Although it is not easy for the International Labour Organization to realize the ideals it upholds, its existence is none the less significant. It is the only public organ through which Japan can participate in world economic activities at present, being no longer a member of the League of Nations. Even if Japan cannot derive many immediate benefits from the organization, it will be possible through this institution to keep in constant touch with

the general trend of the world and to assimilate gradually what is necessary and suitable to Japan in accordance with the Japanese situation. In this sense the International Labour Organization can never be ignored."

### Report on "Opium and Labour"

Under the above title the International Labour Office has just published a report on a documentary investigation into the extent and effects of opium smoking among workers.

This report was prepared by the Office in pursuance of a resolution adopted by the International Labour Conference in 1932, and the Governing Body of the Office decided at its 73rd Session that the report should be submitted to the Twentieth Session of the Conference, which will open in Geneva on June 4, 1936.

The report is based on documentary material furnished by the Opium Advisory Committee of the League of Nations, and mainly on information contained in the published report of the League of Nations Commission of Enquiry into the Control of Opium Smoking in the Far East, and in the unpublished minutes of evidence given before the Commission.

After examining the situation in various Far-Eastern territories the report draws conclusions as to the extent of opium smoking among workers, and the relation of opium smoking to recruiting, migration, employment, wages and indebtedness, efficiency, accidents and health, and working and living conditions. The conclusions emphasize the close connection which the investigation has shown to exist between the conditions under which the workers live and work and the opium-smoking habit.

The annual report of the Schools of New Brunswick, 1933-34, published by the Chief Superintendent of Education, indicates that the total number of schools in operation on June 30, 1934, was 2,516, an increase of 94 over last year; the total number of teachers was 2,764, an increase of 124 over the previous year, and the total number of pupils in attendance was 91,184, an increase of 1,903 over the preceding year. According to a tabular summary, the average salaries paid to the various classes of teachers in 1934 were as follows: Grammar school, \$1,875.40; superior school, \$1,101.05; first class male, \$929.81; second class male, \$468.49; third class male, \$336.54; first class female, \$799.34; second class female, \$432.73; and third class female, \$312.81. The total expenditure from the provincial revenues for the payment of grants to teachers for the year under review was \$356,467.50.

## THREE SOURCES OF UNEMPLOYMENT

### Review of the Major Factors in the World Economic Crisis

UNDER the title, *Three Sources of Unemployment*,\* the International Labour Office has published a survey of Professor Vladimir Woytinsky in which he traces the combined action of population changes, technical progress and economic development upon this world-wide problem.

In discussing the share of each of the factors in the present unemployment the author enumerates them as follows: (1) technical progress, increasing the individual output of the workers and making it possible to obtain the same production with less labour (technological unemployment); (2) reduction of activity owing to economic depression (cyclical unemployment); (3) variations in population (the demographic factor).

To distinguish the share of each of these factors professor Woytinsky proposes an analytical formula, the value of which depends upon the quality of unemployment statistics. These are admittedly inadequate. For this reason he aims primarily at working out a scientific method, and offers various suggestions for improving employment and unemployment statistics.

Subject to these reservations, Professor Woytinsky applies his formula to the study of unemployment in several important industrial countries and comes to various interesting conclusions which are condensed in the *Monthly Summary of the International Labour Organization* as follows:—

(1) Although the development of unemployment possibilities in the various countries since the war has not been uniform, the three depressions that have shaken the economic life of the world during the past 16 years—namely, in 1920-1922, 1926-1927, and since the end of 1929—have been international in character, and have spread to a number of countries.

(2) The characteristic feature of the period between the end of the war and the beginning of the world depression is the fact that in many countries the development of employment has failed to keep pace with the growth of production. This was the case in the United States in the middle of a period of marked prosperity, as also in Great Britain, with its standing army of unemployed workers, in Germany during the years of economic recovery, in Japan, the Scandinavian countries, etc.

It was during the summer of 1929 that the economic situation of the world was, compara-

tively speaking, most prosperous. But even at that date there were more workers unemployed or on short time in many countries than there usually were during periods of depression before the war.

(3) From the demographic point of view two separate phases can be distinguished in the post-war period: up to 1930 the age groups entering occupational life were well stocked. After that date came the age groups from the war years, when the birth rate had been low.

During the first phase, up to 1930, there were three determining factors in the influx of new workers to the occupied population:

- (a) the natural increase at a rather high rate of the population of working age;
- (b) the removal of certain vestiges of the war years, when large numbers of women had temporarily engaged in occupational activity;
- (c) the decline of international migration movements as compared with the pre-war period.

Under the influence of these three factors, the occupied population in most countries increased from year to year. The rate of increase was quite high, but as a general rule it did not exceed the pre-war rate.

In the second phase, which covers the years of world-wide depression, the pressure on the employment market in Germany, Great Britain, France, Italy, and some other countries, was appreciably relieved by the decline in the influx of new labour. This to some extent mitigated the effects of the decrease in production on employment possibilities.

(4) The distribution of population over the various occupational groups may be considered as a demographic problem in the wide sense. The gradual industrialisation of the population was a characteristic feature of the pre-war period: the proportion of the occupied population in industrial occupations rose, and these occupations were able to absorb the surplus supply of labour from rural areas.

After the war, the industrialization of the population ceased in many countries. In the United States, Great Britain, Japan and Norway industrial occupations are so crowded that they have ceased to attract the new elements in the occupied population.

(5) Everywhere the power of industry to absorb the additions to the occupied population has waned. In every country that has been affected by the latest depression and that has statistics of its unemployment market it has been found that the seat of the disease of unemployment lies in mining and manufacturing industry, not including building. But this

\*Studies and Reports: Series (Employment and Unemployment) No. 20, published for the International Labour Office by P. S. King and Son, Ltd., London, S.W.1.

phenomenon is always obscured to some extent by the fact that wage earners in search of employment are gradually forced into other occupational groups.

The absolute or relevant decrease in the ability of the industrial occupations to absorb additional labour must be attributed to the changes that occurred (1) in the rate of increase of the volume of industrial production, (2) in the output per head of industrial workers.

In all the cases studied, the volume of production is seen to have increased more rapidly than the individual output of the occupied population in industry (or of the wage earners employed in industrial undertakings).

Before the depression, then, industrial production in the United States, Great Britain, Japan and Norway was increasing less rapidly than the individual output of the workers employed. This meant the elimination of a certain amount of labour from the production process. The unemployment that had grown up in the industrial occupations in the United States, Japan and Norway before the depression may therefore be considered technological unemployment. In the case of Great Britain, the situation is rather more complex: the unduly slow growth of production was really the cause of the disproportion in the development of the various factors.

On the other hand, no evidence of technological unemployment can be found in the case of Germany, France, Italy, Czechoslovakia, Sweden or Denmark. It is true that human labour was displaced by machinery in these countries too, but this was counterbalanced by an increase in production that absorbed the labour thus set free.

(6) The unemployment that has come into existence since 1929 is due entirely to the decline in industrial production. In every country this unemployment was at first concentrated in the same branch of the economic system—industry. Other groups of occupations were not affected until later, and then much less acutely.

The amount of work to be performed during the depression kept pace with the falling rate of industrial production, but the undertakings were able, by spreading employment over a larger number of workers, to retain in their service a fraction of those who would otherwise have been dismissed as superfluous. When estimating the extent of unemployment during the depression, therefore, one must add to the official number of registered unemployed persons both those who are on short time and those "invisible" unemployed persons who have not applied to the exchanges because they expected no help from them.

The technological unemployment of 1929 might be thought to be insignificant and harmless when compared with this disastrous unemployment of economic origin. But nothing could be more mistaken than such a conclusion. The recent depression might never have reached such alarming proportions if the economic equilibrium of the world had not first of all been upset by the growth of unemployment right in the middle of a period of economic recovery and prosperity.

---

A short history of the industrial diseases of silicosis and asbestosis has recently been prepared by the Home Office of Great Britain, and published in a memorandum.

Demarcating the two diseases, it is pointed out that the disease of the lungs now known as silicosis was recognized in Great Britain in very early times as a trade disease affecting those who worked on certain kinds of stone. It occurred amongst masons working with sandstone, and was called "stone masons' phthisis"; in later times it was found in those employed in grinding metals on sandstone wheels, and was called "grinders' rot"; it appeared too in potters who worked with ground flint, and was called "potters' asthma," and amongst miners in lead, tin and gold mines, it was known as "miners' phthisis." All these terms indicate the same disease, silicosis, which may be accompanied by tuberculosis. It has been found to occur in many industries and processes, all of which have one characteristic in common—exposure of the workers to the inhalation of silica dust.

Asbestosis is a disease of the lungs which resembles silicosis in many ways. It is produced as a result of the inhalation of dust of asbestos, and the increased use of this mineral in manufacturing processes during recent years has been followed by the occurrence of a considerable number of cases of the disease. During the three years 1932-4 the Medical Board certified 60 cases of disablement and 5 deaths among workers in the asbestos industry.

The object of the memorandum is to set out briefly what these diseases are, how and where they are produced, the measures which can be taken to prevent them, the provision made for compensation, and the arrangements for the medical examination and certification of workmen.

Research is going on, under the direction of a Committee appointed by the Medical Research Council, with a view to extending the knowledge and understanding of silicosis and other pulmonary diseases due to the inhalation of dusts.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF NOVEMBER, 1935

### Reports of Superintendents of the Employment Service

**T**HE employment situation at the end of November was reported by the superintendents of the Employment Service to be as follows:—

Practically all farming activities in the Maritimes were completed and only ordinary farm chores were being carried on. Weather conditions were adverse to good fishing, although smelt fishing was becoming more active as the season advanced. Logging operations were almost at a standstill, heavy rains having made lakes out of swamp lands and wood roads impassable. Sawmills at Chatham had finished work for the season, but sash and door factories were busy. Mines in the New Glasgow area operated from one to six days per week, while those in Cape Breton and vicinity, except for one mine which was idle, worked from two to four days per week. Manufacturing showed little change from previous reports, all producers showing a fair average, with nearly all plants working steady time, and the iron and steel industry reporting no idleness. Building construction was quiet, but maintenance work on highways continued. Freight traffic at Halifax by railroads was somewhat light, but that by truck was fairly heavy. Elsewhere, except at Sydney, rail and auto transportation was good. Trade was better, due to the fast approaching holiday season. Requests were received for domestics and charworkers in the Women's Division, and placements were made. Farming was quiet in the Province of Quebec, but great activity was reported in logging, particularly at Hull, where over 1,000 bushmen had been placed during the month. From other places in the province reports varied. Chicoutimi and Three Rivers districts required fewer woodsmen, but at Rouyn and Sherbrooke the demand was good. Manufacturing showed little change. Tobacco, clothing, iron and steel, leather and fur establishments were busy, but shoe factories were not so active. Building construction showed little improvement, except at Sherbrooke, which reported conditions satisfactory. Transportation was exceptionally good at Quebec City and Three Rivers. Trade was fair. In the Women's Division a number of calls were received for domestic help, many of which were easily filled.

The demand for farm workers in Ontario was small, with a large surplus of applicants adequate for all requirements. Where wages offered were too low, difficulty was experi-

enced in filling these requests, as the men preferred work in relief camps where hours were shorter and clothing supplied. Few vacancies were available for bushmen, as nearly all camps were filled to capacity, with very little labour turnover and no camps opening up. Mining was quiet. Manufacturing plants in general were running fairly steadily. Staffs were well maintained but no additional workers called for. Temporary layoffs were reported in one or two localities, due to seasonal slackness or stocktaking, but these did not affect the manufacturing situation as a whole. Building construction showed little change; larger projects already underway were nearing completion, and few new ones of any size contemplated. Highway work and airport construction continued as a relief measure. Railroads running out of St. Thomas were very busy and all men working in the traffic department were making good time. Trade, wholesale and retail, was good. In the Women's Department clerical and industrial placements were difficult to make, as all firms were canvassed by those out of work without reporting to the offices of the Employment Service, but many placements in domestic service were effected and in the majority of instances satisfactory workers obtained.

The trend of placements in farming was upwards in the Prairie Provinces, mostly due, however, to the effective working out of the winter Farm Labour Relief Scheme, although some men found employment with farmers independent of the government bonus. Logging was quiet, also mining, the milder weather halting sales to some extent in the latter industry. Manufacturing was unchanged. Little new building construction was reported, although building permits in Winnipeg for the past eleven months were considerably higher than those for the corresponding period of 1934. Relief camps continued to operate. In the Women's Section at Winnipeg there was a marked increase in requests for domestics, particularly for country points, but in Saskatchewan and Alberta conditions were quieter, with sufficient applicants on hand to meet all demands.

Quietness prevailed in the farming industry in British Columbia. No help was needed in the orchards and women from the packing houses were being laid off. Logging appeared more prosperous and saw and shingle mills were all running full time.

Mining was brisk. Fishing was practically completed for the season. Manufacturing was unchanged. Building construction was rather quiet with no new work being undertaken and relief projects continued. The dry docks and shipyards at Prince Rupert were quiet, but at all other ports waterfront work was

heavy. Vancouver, however, was still hampered by a longshore strike which diverted much business to other harbours. Trade was fair. A number of women were registered for office and store work but none was available; there was, however, a scarcity of experienced domestics.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN OCTOBER, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on November 1 was 9,482, the employees on their payrolls numbering 1,012,103 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for October was 1,777 having an aggregate membership of 169,839 persons, 13.3 per cent

of whom were without employment on November 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of November, as Reported by Employers

According to reports furnished to the Dominion Bureau of Statistics by leading industrial establishments throughout the Dominion, employment at the beginning of November showed a continuation of the generally upward tendency in evidence during the last six months, the improvement resulting in a higher level of employment at November 1 than in any other month since December 1, 1930. The 9,482 firms making returns reported payrolls aggregating 1,012,103, compared with 997,300 at October 1, 1935. Reflecting this increase of 14,803 persons, the index rose from 106.1 in the preceding month to 107.7 at the first of November, as compared with 100.2 on November 1, 1934. The advance at the date under review is decidedly larger than that recorded at November 1 in any of the five previous years in which the indicated trend of employment has been favourable; in the remaining years for which statistics are available, industrial activity had declined at that date in most cases substantially, so that the average change in the index

from October 1 to November 1 is a reduction of about one point. As a consequence of this upward movement, the seasonally-adjusted index rose from 101.1 at October 1, 1935, to 103.5 at the beginning of November.

In the fifteen years of the record, the unadjusted index at November 1 has been as follows: 1935, 107.7; 1934, 100.2; 1933, 91.3; 1932, 84.7; 1931, 103.0; 1930, 112.9; 1929, 124.6; 1928, 118.9; 1927, 108.8; 1926, 104.0; 1925, 98.3; 1924, 94.1; 1923, 100.0; 1922, 97.0 and 1921, 91.3. (1926 average=100).

Particularly important improvement occurred at the beginning of November, 1935, in logging, highway and building construction, mining, retail trade and manufacturing as a whole also afforded greater employment. Within the last-named group (in which the general gain was contra-seasonal) there were especially pronounced increases in iron and steel, these also being contrary to the usual seasonal movement at November 1 in the years since 1920. Textiles and some other industries were also more active, while the

food and lumber divisions released large numbers of persons as the season's work drew to a close. Transportation, railway construction, communications and services showed contractions, as is customary in the autumn.

A fuller analysis of the situation in the various industries is given below.

### Employment by Economic Areas

The tendency was downward in the Maritime Provinces and British Columbia, while improvement was recorded in Quebec, Ontario and the Prairie Provinces. Employment in all five economic areas was at a higher level than at the beginning of November in 1934, 1933 or 1932.

October. An increase had been indicated on November 1, 1934, but the index was then over six points lower than at the latest date, when it was 111.1.

*Quebec.*—Firms in Quebec showed their seventh consecutive monthly increase; this took place chiefly in logging, which was decidedly more active, while there were also gains in manufacturing, building and retail trade. On the other hand, highway and railway construction and hotels and restaurants registered curtailment. Within the manufacturing group, the leather, lumber, vegetable food and clay, glass and stone divisions showed contractions, in some cases of a seasonal character; pulp and paper, textile and iron

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*Maritime Provinces.*—There was a decline in the Maritime Provinces on November 1, 1935, following a season of considerable activity; most of the loss took place in highway construction, but manufacturing (mainly in lumber, pulp and paper and electric light and power works) and mining were also slacker. On the other hand, vegetable food and iron and steel factories, building construction, logging and trade showed improvement. Returns were received from 660 employers, with 79,290 workers on their payrolls, or 1,284 fewer than at the beginning of

and steel factories, however, recorded considerably heightened activity. The 2,244 co-operating employers enlarged their staffs by 5,393 persons, bringing them to 289,363 on November 1. Employment was brisker than on the same date in 1934, when a gain, involving a similar number of workers had been indicated. The experience of the last fourteen years shows that employment is, on the average, in rather smaller volume on November 1 than on October 1; the increase of nearly two per cent occurring at the beginning of November, 1935, is therefore of particular interest.

*Ontario.*—Employment in Ontario showed further improvement, which compared favourably with the general decline indicated, on the average, at November 1 in the years since 1920. The tendency had been seasonally downward at the beginning of November of last year, and the index then was lower by over six points than on the date under review, when it was 110.0. There was a substantial advance at the latest date in logging; metallic ore mining, highway construction, retail trade and manufacturing as a whole also afforded employment to a considerably larger number of workers than at October 1. Within the manufacturing division, the iron and steel, non-ferrous metal, textile, rubber, chemical and electrical apparatus divisions were brisker, while leather, vegetable food, lumber, clay, glass and stone, mineral product, pulp and paper and electric light and power plants showed losses. A combined working force of 421,522 persons was reported by the 4,190 employers whose data were tabulated,

and who had 414,197 on their payrolls in the preceding month.

*Prairie Provinces.*—There was an increase in employment in the Prairie Provinces on November 1, 1935, the seventh recorded in as many months; the gain at the latest date is especially interesting in that it is contrary to the usual seasonal movement indicated at the beginning of November in the years since 1920. Returns were compiled from 1,381 firms having 136,640 employees, as against 129,798 on October 1, 1935. Logging, coal-mining and highway construction afforded considerably more employment; on the other hand, service, transportation and railway construction showed contractions. There was a small gain, on the whole, in manufacturing, occurring mainly in animal food plants. The general expansion in the Prairies considerably exceeds that also noted on November 1, 1934, when the index was several points lower, standing at 96.5, as compared with 108.1 at the latest date.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS.

(AVERAGE CALENDAR YEAR 1926=100).

Sept. 1.....	102.7	107.0	99.3	103.9	100.5	103.0
Oct. 1.....	106.1	112.9	103.1	108.1	102.7	106.0
Nov. 1.....	107.7	111.1	105.0	110.0	108.1	101.8
Relative Weight of Employment by Economic Areas as at Nov. 1, 1935.....	100.0	7.8	28.6	41.7	13.5	8.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

*British Columbia.*—A further decrease in employment was recorded in British Columbia; the staffs of the 1,007 employers furnishing returns aggregated 85,288, compared with 88,761 in the preceding month. The reduction took place largely in manufacturing, there being important seasonal losses in food factories, together with contractions in lumber and non-ferrous metal plants. Transportation and highway and railway construction also showed declines. On the other hand, building was rather more active. Employment generally was much brisker than on November 1 of last year, when the shrinkage recorded had been on a smaller scale; the index then stood at 94.1, as compared with 101.8 at the latest date.

### Employment by Cities

Additions to staffs were registered in Montreal, Toronto, Hamilton, Windsor and Winnipeg, while in Quebec City, Ottawa and Vancouver there were reductions. The general situation in all these centres was better than

that indicated by the firms reporting at the beginning of November, 1934.

*Montreal.*—Further improvement occurred in Montreal on November 1, when 459 persons were added to the staffs of the 1,303 co-operating firms, who employed 137,380. Manufactures showed heightened activity, and there were gains in construction and retail trade. Within the manufacturing group, there was curtailment in textile and leather factories, but vegetable food, iron and steel and non-ferrous metal plants reported advances. A rather smaller increase had been noted at the same date of last year, and the index was then over four points lower.

*Quebec City.*—Employment showed a falling-off in Quebec, according to 164 employers of 13,176 persons, compared with 13,350 on October 1. Manufacturing indicated most of the contraction, while transportation and trade recorded moderate improvement; within the manufacturing group, the largest decrease occurred in leather and building material plants. Employment as reported by em-

Relative Weight of Employment by Cit- ies as at Nov. 1, 1935.	13.6	1.3	12.3	1.3	3.2	1.5	3.9	3.2

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

ployers was in greater volume than at the beginning of November, 1934, when the indicated losses had been on a rather smaller scale.

*Toronto.*—There was a further increase in the number of workers on the payrolls of 1,409 firms in Toronto, who had 124,246 persons in their employ, or 849 more than in the preceding month. Most of the expansion took place in manufacturing (notably in textile, printing and publishing and iron and steel plants), and in retail trade. On the other hand, transportation and construction were quieter. A similar gain, on the whole, had been registered at November 1 a year ago, but the index then was between four and five points lower.

*Ottawa.*—In Ottawa, curtailment was shown in manufacturing, particularly in the pulp and paper division; transportation and road construction were also rather slacker, while building reported greater activity. The changes in

the other groups were slight. The 177 employers furnishing data reported 13,103 workers, as against 13,626 on October 1. Employment was in better volume than on the same date in 1934, when the trend had also been downward.

*Hamilton.*—Employment in Hamilton increased substantially on November 1, when the 274 co-operating firms employed 32,501 persons, or 467 more than at the beginning of October. Manufacturing was decidedly brisker, chiefly in the iron and steel group, while clay, glass and stone products employed fewer persons; other industries, both manufacturing and non-manufacturing, showed little general change. A somewhat larger gain had been reported at the beginning of November of last year; the index then was some fifteen points lower.

*Windsor.*—Activity in the Border Cities showed a further pronounced increase; 171 employers reported 15,633 persons on their

Relative Weight of Employment by Industries as at Nov. 1, 1935.....	100.0	51.5	4.4	6.0	2.1	9.9	13.9	2.5	9.7

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

payrolls, compared with 14,468 at the beginning of October. The improvement took place largely in the automobile and related industries. A marked decrease had been indicated on the same date of a year ago, when employment was at a much lower level.

**Winnipeg.**—Employment in Winnipeg showed another moderate gain, according to 460 firms employing 39,175 workers at the beginning of November, as compared with 39,005 in their last report. Manufacturing reported slight advances, while transportation and trade released help. Little general change had been recorded on November 1, 1934; employment was then in lesser volume.

**Vancouver.**—There was a downward movement in Vancouver, where 422 employers had 32,238 persons on their staffs, or 720 fewer than in the preceding month. Manufacturing, transportation and construction showed declines, those in the first-named occurring main-

ly in food and lumber factories. Employment generally was more active than at the beginning of November of last year, when curtailment had also been reported.

### Employment by Manufacturing Industries

Employment in manufactures showed a continuation of the uninterrupted upward trend indicated since the opening of the year; the gains, though slight, were particularly interesting because with only one exception, the movement in factory employment has been unfavourable at the beginning of November in the years since 1920. Reflecting this contra-seasonal improvement, the crude index rose from 103.3 on October 1 to 103.5 on November 1, while after correction for seasonal variation, the index stood at 102.5, or nearly two points higher than the adjusted figure for the preceding month. Both crude

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Nov. 1, 1935	Oct. 1, 1935	Nov. 1, 1934	Nov. 1, 1933	Nov. 1, 1932	Nov. 1, 1931	Nov. 1, 1930

Steel shipbuilding and repairing.....	.2	62.9	68.0	45.3	44.8	64.3	71.2	109.7
Heating appliances.....	.5	113.1	112.1	100.1	89.9	82.4	100.4	123.4
Iron and steel fabrication (n.e.s.)...	.6	86.8	83.9	63.9	51.9	52.6	93.4	142.3
Foundry and machine shop products.....	.6	97.4	97.1	72.5	64.8	66.5	76.3	100.4
Other iron and steel products.....	1.6	83.5	86.4	78.6	69.9	67.9	86.8	98.2
Non-ferrous metal products.....	2.0	126.8	125.8	111.7	93.8	82.9	98.7	130.6
Non-metallic mineral products.....	1.4	139.8	142.7	134.3	127.8	119.0	123.2	155.6
Miscellaneous.....	.5	124.6	130.2	120.9	103.7	101.0	105.8	113.2

\* The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

and seasonally-corrected indexes were higher on November 1, 1935, than in any other month since November, 1930.

The unadjusted indexes of factory employment (calculated on the 1926 average as 100), have been as follows at the beginning of November in the years since 1920: 1935, 103.5; 1934, 92.8; 1933, 86.5; 1932, 81.7; 1931, 88.8; 1930, 104.6; 1929, 117.2; 1928, 115.1; 1927, 104.9; 1926, 102.7; 1925, 96.5; 1924, 91.3; 1923, 98.7; 1922, 94.9 and 1921, 87.8.

A brief review of the course of employment in manufacturing during the elapsed months of 1935 shows, as already mentioned, uninterrupted improvement of a general character from January 1 to November 1. During this period, the unadjusted index advanced from 87.4 at the former to 103.5 at the latter date, or by 18.4 per cent. The index on the date under review (103.5) was 10.7 points, or 11.5 per cent higher than on November 1, 1934, when the reported contraction had slightly exceeded the average decline in the experience of the years since 1920.

The Dominion Bureau of Statistics tabulated reports for November 1 from 5,585 manufacturers whose staffs aggregated 520,601, compared with 519,513 at the beginning of October. There were large increases in iron and steel, which were of special interest because they were contrary to the usual seasonal trend at the beginning of November in the last fourteen years. The textile, rubber, electrical appliance, chemical, beverage, and non-ferrous metal industries also afforded greater employment than in the preceding month. On the other hand, the animal and vegetable food, lumber, leather, clay, glass and stone, electric light and power, non-metallic mineral, and miscellaneous manufacturing industries released employees, the declines being in many cases of a seasonal nature.

*Animal Products, Edible.*—Meat-preserving plants reported greatly increased activity, but curtailment in dairies and fish canneries caused a reduction in the group as a whole. Statistics were received from 275 manufacturers, employing 22,924 persons, as compared with 23,748 in the preceding month. This contraction, which took place chiefly in British Columbia, was much larger than that registered on the corresponding date last year, but activity was then at a generally lower level.

*Leather and Products.*—There was a falling-off in employment in this group on November 1, mainly in boot and shoe factories in Quebec and Ontario. The 282 firms furnishing data reported 21,646 workers, as against 22,417 on October 1. The index was some ten points

higher than on the same date in 1934, when a similar decline had been noted.

*Lumber and Products.*—Further seasonal reductions, involving a smaller number of employees than in the autumn of last year, were indicated in the lumber group, in which employment was in greater volume than in November, 1934. The losses on the date under review took place principally in rough and dressed lumber mills, while furniture works showed improvement. A combined working force of 40,015 persons was reported by the 813 co-operating manufacturers, as compared with 41,928 at the beginning of October. The most pronounced decreases were in the Maritime Provinces, but the tendency was generally downward.

*Musical Instruments.*—An increase in staffs was indicated in musical instrument factories, 35 of which employed 1,479 workers, or 65 more than on October 1. Employment was in smaller volume than at the beginning of November, 1934, when a rather larger advance had been made.

*Plant Products, Edible.*—Fruit and vegetable canneries reported very marked seasonal reductions in their payrolls, while sugar and syrup, and chocolate and confectionery factories showed an advance. The forces of the 459 co-operating firms aggregated 36,637 persons, or 2,757 fewer than in their last return. Employment declined in Quebec, Ontario, and British Columbia; in the Prairie Provinces, little general change was noted, while there was improvement in the Maritime Provinces. The curtailment, on the whole, involved a much smaller number of workers than that registered on the corresponding date last year, when the index number was over twelve points lower than on the date under review.

*Pulp and Paper Products.*—There was no general change in the staffs reported by employers in this group, 594 of whom had 59,873 workers on their payrolls, as compared with 59,844 at the beginning of October. Improvement was recorded in printing and publishing houses, while pulp and paper mills were rather slacker. The tendency was favourable in Quebec and the Western Provinces, but there were declines in Ontario and the Maritimes. Larger gains had been indicated at the beginning of November a year ago, in spite of which the index was then over three points lower.

*Rubber Products.*—Employment in rubber goods showed a considerable advance on November 1; data were compiled from 51 firms with 12,271 employees, as against 11,762 in their last report. Employment was at a higher

level than on November 1, 1934, when little general change had been noted.

*Textile Products.*—Hosiery and knitting, cotton, woollen, garment and miscellaneous textile factories reported heightened activity, but the production of headwear showed a slight falling-off; 984 textile manufacturers enlarged their payrolls from 99,313 on October 1 to 101,127 on the date under review. The increases took place chiefly in Quebec and Ontario. A small gain had been shown at the beginning of November last year, when the index was several points lower.

*Tobacco, Distilled and Malt Liquors.*—There was a decline in tobacco works, while beverage factories afforded more employment, according to the 171 establishments furnishing statistics in this group, which employed 16,066 persons as compared with 15,875 on October 1. Most of the improvement mentioned occurred in Ontario. A reduction had been indicated on the corresponding date last year, when employment was in smaller volume.

*Chemicals and Allied Products.*—A considerable advance was recorded in this group, in which statements were furnished by 199 plants employing 11,051 persons, or 231 more than in their last report. Activity was decidedly greater than in the autumn of 1934, when the tendency had also been upward.

*Clay, Glass and Stone Products.*—A seasonal falling-off was noted in building material plants, chiefly in Quebec and Ontario, while slight gains occurred in British Columbia; employment generally was at a higher level than on November 1, 1934, when less extensive losses, on the whole, had taken place. The forces of the 197 employers from whom information was received, declined since October 1 by 478 persons, to 8,837 at the beginning of November, 1935.

*Electric Light and Power.*—Employment in the production of electric current showed a contraction, 247 workers being released from the forces of the 98 co-operating manufacturers, who employed 14,849 persons. Smaller declines had been indicated in this industry on November 1 of last year, when the index was slightly lower.

*Electrical Appliances.*—Considerable improvement was reported in electrical apparatus works, 110 of which had 14,372 employees, or 295 more than in their last return. A similar increase had occurred on the same date in 1934, but employment was then in decidedly smaller volume.

*Iron and Steel Products.*—Employment in automobile and other land vehicle works

showed important increases, mainly in the production of automobiles and railroad rolling stock; the crude, rolled and forged, agricultural implement, structural iron and steel, wire and other divisions of the iron and steel industry also reported heightened activity. The general increase exceeds that indicated in any other of the Novembers on record in which the trend has been favourable; the average change in the last fourteen years, however, has been a decline.

Statements were received from 846 manufacturers whose payrolls aggregated 116,901 persons, as compared with 111,578 in the preceding month. Employment advanced in all except the Western Provinces. Improvement on a smaller scale had been indicated at the beginning of November last year, and employment then was quieter than on the date under review.

*Non-ferrous Metal Products.*—Data tabulated from 159 firms in the non-ferrous metal group showed that they employed 20,148 workers, or 172 more than on October 1. There was an increase in the base and the precious metal divisions, but smelting and refining and aluminum works reported a small falling-off. Employment was decidedly brisker than on the same date of 1934, when curtailment in personnel had been indicated.

*Non-Metallic Mineral Products.*—There was a decline in employment in non-metallic mineral product factories, 139 of which released 286 persons, bringing their staffs to 14,186 at the beginning of November. The index was higher than on November 1 of last year, when a slighter reduction had been noted.

### Logging

Statistics were tabulated from 306 firms employing 44,448 men, or 11,893 more than in the preceding month. This advance was only three times exceeded in the fourteen preceding Novembers for which data are available; one of these larger gains had taken place on November 1, 1934, and the index then, standing at 171.9, was higher than at the latest date, when it was 158.4. The volume of employment in bush operations was greater than in the early winter of any other year of the record except 1934 and 1929. There were increases on the date under review in four of the five economic areas, only British Columbia showing a falling-off from October 1.

### Mining

Coal-mining and the extraction of metallic ores afforded much more employment, while quarries and other non-metallic mineral mines were rather slacker. Statements were com-

piled from 355 mine operators, with 60,817 employees, or 1,376 more than in their last report. Of the total employees recorded on the date under review, 25,131 belonged in the coal-mining, 28,105 in the metallic ore and 7,581 in the non-metallic mineral group. A rather larger gain on the whole had been indicated at the same date in 1934, but the index then was below its level at the time of writing.

### Communications

Telephones showed a moderate seasonal contraction, while telegraphs afforded slightly more employment. The companies and branches making returns had 21,548 workers on their payrolls, a loss of 190 since October 1. The index of employment was fractionally higher than on November 1, 1934, when a similar falling-off had been noted.

### Transportation

*Street Railways and Cartage.*—There was a reduction in activity in local transportation, according to 210 firms whose staffs aggregated 26,030 at the beginning of November, as compared with 26,350 in the preceding month. The decline occurred chiefly in Quebec and Ontario. Employment was at a higher level than at the corresponding date in 1934, when similar losses were reported.

*Steam Railways.*—Statistics were tabulated from 101 divisional superintendents and other employers in the railway operation group, whose payrolls were reduced by 1,234 persons, to 59,026 on November 1. The largest contractions were in Ontario and the Prairie Provinces. Employment was slacker than at the beginning of November, 1934, when little general change had been indicated.

*Shipping and Stevedoring.*—A decrease was noted in water transportation, 102 companies employing 15,015 workers, as compared with 15,706 in the preceding month. There was a falling-off in Quebec and British Columbia. Similar curtailment, on the whole, had been shown on November 1 last year, when the index stood at 88.3, compared with 89.8 on the date under review.

### Construction

*Building.*—There was a considerable increase in building, 1,237 persons being added to the forces of the 699 co-operating contractors, who had 28,627 employees, a number substantially in excess of that reported by the firms making returns at the beginning of November, 1934; a smaller gain had then been experienced. The greatest advance on the date under review took place in Quebec, but the tendency was generally favourable.

*Highway.*—Work on highways and streets decreased in the Maritime Provinces, Quebec

and British Columbia, but there were moderate increases in Ontario and large gains in the Prairies. The index, at 226.3 at the beginning of November, was higher than on the same date of 1934, when losses on the whole had been reported. Statements were tabulated from 368 employers, whose staffs, standing at 83,753 were larger by 4,738 persons than on October 1, 1935.

*Railway.*—Seasonal curtailment of railway construction work was recorded in all economic areas, the most marked reductions occurring in the Prairie Provinces. The forces of the 33 companies and divisional superintendents furnishing returns declined from 31,614 persons on October 1, to 28,521 at the beginning of November. This shrinkage was on a much smaller scale than that registered on the corresponding date in 1934, and the level of employment then was lower.

### Services

Hotels and restaurants and laundries and dry cleaning establishments were seasonally quiet, while the fluctuations in other branches of services were slight, according to 460 firms employing 25,297 persons, or 715 fewer than at the beginning of October. The index, at 117.1, was 2.2 points higher than that of November 1, 1934, when smaller changes, on the whole, had been indicated.

### Trade

The trend of employment in trade was again upward, 714 workers being added to the forces of the 1,178 retail and wholesale establishments furnishing returns, whose staffs aggregated 98,420. The advance took place in the retail division, wholesale houses showing curtailment in employment. The index stood at 124.6, compared with 121.3 on November 1, 1934, when the reported gains had been on a larger scale. The advance this year was less than the average indicated in the years since 1920, the unseasonably mild weather prevailing in certain sections of the country at the beginning of November having retarded activity in trade. Pronounced expansion in employment may be expected during the next few weeks, in preparation for the Christmas and holiday trade.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of October, 1935

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work other than their own trades or who are idle due to illness are not considered as unemployed, while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

absorbed a considerably greater number of workers than in September and were almost entirely responsible for the better situation reflected from that province. In Nova Scotia, New Brunswick and British Columbia there was little variation in the level of employment afforded from September, though the trend was toward heightened activity. Manitoba and Saskatchewan unions, on the contrary, reported declines in available work of very moderate proportions and of rather general distribution throughout the various trades and industries. Quieter conditions prevailing in the Quebec garment trades,

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Activity for local trade union members at the close of October tended less favourably than in September, the minor declines noted being the first interruption in the series of employment advances characterizing the industrial situation since the close of April. Returns for October were tabulated from 1,777 labour organizations with a membership aggregate of 169,839 persons, 22,583, or 13.3 per cent, of whom were idle on the last day of the month, contrasted with a percentage of 13.0 in September. Conditions, however, were improved from October of last year when 16.2 per cent of the members reported were out of work. The Alberta coal mines

offset in part by employment advancement among leather workers, was the determining factor in the slight adverse change noted in that province from September, though activity in the building and construction trades was also somewhat retarded. In Ontario, recessions of slight importance in any one group of trades occurred. Compared with the returns for October last year British Columbia and Ontario members were considerably better employed during the month reviewed, the improvement being especially pronounced among building and construction tradesmen. In Manitoba and Alberta gains on a somewhat smaller scale, were registered, Quebec

and Saskatchewan unions indicating an upward trend of activity, though the change from October a year ago was but fractional. Employment for New Brunswick members, however, was at a slightly lower level than in October, 1934, and in Nova Scotia the same volume of unemployment was registered in both months compared.

Returns on unemployment for the largest city in each province, with the exception of Prince Edward Island, are tabulated separately each month. In Halifax during October conditions were considerably brighter than in the preceding month, and in Vancouver and Edmonton a slightly higher level of activity was maintained. The percentage of idleness reported from Montreal remained identical with that of September. Regina unions, however, reported moderate recessions in employment and in Toronto, Winnipeg and Saint John smaller declines occurred. When contrasting with the returns for October a year ago employment for Vancouver members rose substantially during the month reviewed, while increased activity, of much lesser degree, was evident among Montreal, Toronto, Winnipeg, Regina and Edmonton unions. Saint John unions, on the contrary, reflected a large increase in slackness, and in Halifax also unemployment was considerably more pronounced.

From the chart which accompanies this article it will be noticed that the curve, after pursuing a consistently downward course from the close of April, indicative of a favourable trend of activity, changed in direction during October, showing an upward projection, though the variance from the close of September was very slight. In this movement the curve followed a course contrary to that of the corresponding month last year though the level reached at the close of the month was lower than that of October, 1934.

In the manufacturing industries employment eased off slightly during October from the previous month, according to the reports tabulated from 481 organizations with 53,596 members. Of these, 7,630 were idle at the end of the month, a percentage of 14.2, as compared with 12.7 per cent in September. A somewhat greater volume of work was afforded than in October, 1934, when unemployment stood at 16.7 per cent. The Quebec garment trades were considerably slacker than in September and affected largely the situation in the manufacturing industries, as a whole. Among hat and cap workers also, there was a substantial drop in available work, and a downward employment trend was apparent among general labourers, glass, textile and carpet, and brewery workers.

On the contrary, the situation for leather workers was much improved from September. Among jewellery and wood workers the percentage gains were noteworthy, though including few members. A slightly higher level of activity was reflected by bakers and confectioners, papermakers and metal polishers,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	11.2	4.9

while iron and steel workers, printing tradesmen and cigar makers showed increases of a fractional nature. Unchanged conditions were reflected by fur workers from September. A decidedly more favourable situation than in October a year ago was shown by wood workers, papermakers, glass and fur workers, and general labourers, and moderate improvement by iron and steel workers, metal polishers, and bakers and confectioners. Conditions for printing tradesmen and garment workers were but nominally better. On the other hand, leather workers suffered large losses in employment and noteworthy recessions were apparent among jewellery and hat and cap workers. Cigar makers reported curtailment in activity of moderate degree, while among brewery, and textile and carpet workers the variation from October last year was very slight, though adverse.

Employment advancement of considerable proportions was evident among coal miners during October, the 50 organizations making returns, with a total of 15,129 members, showing an unemployment percentage of 4.7 as compared with 9.8 per cent of idleness at the close of September. There was little change in the level of activity from October last year, though the tendency was favourable, unemployment for that month standing at 5.4. Alberta miners were afforded a much better volume of work than in September and were entirely responsible for the better situation obtaining in the coal mining group as a whole. In the Nova Scotia and British Columbia mines the curtailment noted was but nominal. When contrasted with the returns for October last year, activity in the Alberta mines showed a slight rise during the month reviewed, while in British Columbia there was a considerable slowing up of employment, and in Nova Scotia the situation declined by less than one per cent. Besides the miners reported as absolutely unemployed there were also a number working at reduced time.

Little variation in conditions was apparent in the building and construction trades during October from the previous month, though the tendency was less favourable, unemployment standing at 42.8 per cent as compared with 41.5 per cent in September. The percentage for October was based on the reports furnished by 188 unions of these tradesmen, combining 19,013 members, 8,134 of whom were idle on the last day of the month. Employment recovery, on a large scale, was noted from October, 1934, when 55.1 per cent of the members reported were without work. Bridge and structural iron workers, whose membership was rather small, were much more busily engaged

than in September, and among bricklayers, masons and plasterers, and granite and stonecutters moderate improvement was recorded. Plumbers and steamfitters, in addition, showed a slightly better trend. Heavy increases in unemployment, however, were indicated by hod carriers and building labourers, and painters, decorators and paperhangers. Among tile layers, lathers and roofers also, there was a substantial drop in work afforded, electrical workers, steam shovelmens, and carpenters and joiners showing recessions of lesser degree. Decidedly greater employment than in October last year was afforded granite and stonecutters, bridge and structural iron workers, and tile layers, lathers and roofers, and the situation for carpenters and joiners, electrical workers, plumbers and steamfitters, bricklayers, masons and plasterers, and steam shovelmens was also much improved. Hod carriers and building labourers registered increased activity of moderate degree. Painters, decorators and paperhangers were the only tradesmen to record a lessening in the volume of work available, which was rather noteworthy.

The transportation industries showed a tendency toward retarded employment during October from the previous month, though the change was but fractional, the 803 associations forwarding reports, with 57,689 members, showing that 4,176 were idle at the end of the month, a percentage of 7.2, as compared with 8.5 per cent in September. Steam railway employees, whose returns included nearly 78 per cent of the entire group membership reported, navigation workers, street and electric railway employees, and teamsters and chauffeurs all participated in this less favourable employment movement noted from September. Contrasted with the returns for October, 1934, when 9.1 per cent of inactivity was recorded in the transportation industries as a whole, steam, and street and electric railway employees, and navigation workers each contributed a small share to the total advancement, while employment for teamsters and chauffeurs was slightly restricted.

Retail shop clerks were considerably better engaged during October than in either the previous month or October, 1934, the 5 unions from which reports were tabulated, with 1,801 members, showing an unemployment percentage of 5.1, as compared with percentages of 10.4 in September and 11.9 in October last year.

Civic employees showed little change in conditions in all three months used for comparative purposes according to the reports forwarded for October by 76 associations with

8,208 members. Of these, 219 were idle on the last day of the month, a percentage of 2.7, contrasted with 2.9 per cent in September and 2.4 per cent in October, 1934.

The miscellaneous group of trades during October showed an improved situation, both over the preceding month and October last year, the variation in the former comparison being quite pronounced. This was apparent from the returns compiled from 125 unions, with an aggregate of 5,091 members, 10.9 per cent of whom were unemployed at the end of the month, in contrast with percentages of 19.4 in September and 15.2 in October, 1934. Gains of particular importance were reflected by barbers when compared with September, these accounting in substantial measure for the better employment level shown in the group as a whole, though heightened activity on a small scale was indicated by theatre and stage employees and unclassified workers. Conditions for stationary engineers and firemen remained almost unchanged from September, while among hotel and restaurant employees there was a moderate drop in work afforded. In comparing with the reports for October last year stationary engineers and firemen registered noteworthy increases in employment during the month reviewed, and unclassified workers, and theatre and stage employees advances on a small scale. Activity for hotel and restaurant employees and barbers declined slightly.

### (3) Employment Office Reports for October, 1935

The volume of business transacted by the offices of the Employment Service of Canada during the month of October, 1935, showed decreases in the average daily placements of 13 per cent and 1 per cent, respectively, when a comparison was made with the records of September, 1935, and with those of October, 1934. The decline under the former comparison was due to a heavy reduction in farm placements, for other than a minor loss in trade, all groups showed gains, the largest of these being in construction and maintenance, services, logging and mining. When compared with October a year ago, logging registered a marked decrease, followed by considerably smaller declines in transportation and mining, while construction and maintenance, manufacturing, services, farming and trade reported gains, the latter being nominal only.

The accompanying chart shows the trend of employment since January, 1933, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the

Fishermen suffered extensive losses in employment during October from the previous month, though conditions were decidedly better than in October a year ago. Reports were received for October from two associations of these workers with a total of 525 members, 28.6 per cent of whom were idle at the end of the month, as contrasted with 16.7 per cent in September and with 72.4 per cent in October, 1934.

Among lumber workers and loggers during October, a moderate drop in activity was shown from the previous month according to the reports tabulated from 4 unions, covering 618 members. Of these 9.9 per cent were unemployed at the end of the month compared with a percentage of 6.9 in September. Employment gains of substantial proportions were noted from October last year when 45.6 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1934, inclusive, and also the percentage of unemployment by provinces for October of each year from 1919 to 1932, inclusive, and for each month from January, 1933, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

Service throughout Canada, computations being made semi-monthly. It will be noted from the graph that the curves of vacancies and placements in relation to applications dipped sharply during October, and at the close of the period under review the levels were ten points below those registered at the end of September and also slightly below those reached on October 31, 1934. The ratio of vacancies to each 100 applications was 56.8 during the first half and 52.2 during the second half of October, 1935, in contrast with the ratios of 58.3 and 53.1 during the corresponding periods of 1934. The ratios of placements to each 100 applications during the periods under review were 53.8 and 49.9 as compared with 54.7 and 50.7 during the corresponding month of 1934.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during October, 1935, was 1,364, as compared with 1,601 during the preceding month and with 1,383 in October a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,512, in comparison with 2,521 in September, 1935, and with 2,491 during October last year.

The average number of placements made daily by the offices of the Service during October, 1935, was 1,298, of which 881 were in regular employment and 417 in work of one week's duration or less, as compared with a total daily average of 1,491 during the preceding month. Placements in October a year ago averaged 1,310 daily, consisting of 802 placements in regular and 508 in casual employment.

During the month of October, 1935, the offices of the Service referred 35,801 persons

The following table gives the placements effected by the offices of the Employment Service, each year, from January, 1925, to date.—

Year	Placements		
	Regular	Casual	Totals
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155

1935 (10 months).....	186,240	108,583	294,823

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

to employment and effected a total of 33,737 placements. Of these, the placements in regular employment were 22,911, of which 18,027 were of men and 4,884 of women, while placements in casual work totalled 10,826. The number of vacancies reported by employers was 25,717 for men and 9,747 for women, a total of 35,464, while applications for work numbered 65,300, of which 49,678 were from men and 15,622 from women. Reports for September, 1935, showed 38,410 positions available, 60,496 applications made, and 35,775 placements effected, while in October, 1934, there were recorded 35,954 vacancies, 64,745 applications for work, and 34,052 placements in regular and casual employment.

#### NOVA SCOTIA

During the month of October, positions offered through employment offices in Nova Scotia were nearly 2 per cent less than in the preceding month and over 35 per cent below the corresponding month of last year. There was a decrease also in placements of over 1 per cent when compared with September and of nearly 36 per cent in comparison with October, 1934. A reduction in relief placements on road construction was responsible for nearly all the losses from October of last year, as although all groups, except farming and communication, showed declines, none were important, except road construction, as mentioned above. Indus-

trial divisions in which most of the placements were effected during the month were logging 50, construction and maintenance 478 and services 267, of which 205 were of household workers. There were 267 men and 84 women placed in regular employment during the month.

#### NEW BRUNSWICK

Orders received at employment offices in New Brunswick during October called for over 1 per cent less workers than in the preceding month, but nearly 1 per cent more than during the corresponding month of last year. There was a decline in placements of over 8 per cent when compared with September, but a nominal loss only in comparison with October, 1934. Although placements were at about the same level as during October of last year for the province as a whole, gains were reported in construction and maintenance and trade, but were offset by losses in services and manufacturing. During the month 325 placements were made under construction and maintenance, and 580 in services. Of the latter 442 were of household workers. Placements in regular employment numbered 325 of men and 75 of women.

#### QUEBEC

There was a gain of nearly 7 per cent in the number of positions offered through employment offices in the province of Quebec during October when compared with the preceding month, but a loss of nearly 6 per cent in comparison with the corresponding month of last year. Placements were over 4 per cent higher than in September, but over 10 per cent less than during October, 1934. A reduction in bush placements was responsible for the decline from October of last year, as small losses in construction and maintenance, mining and manufacturing were more than offset by gains in services and trade. Placements by industrial divisions included manufacturing 97, logging 1,246, construction and maintenance 1,070, trade 133 and services 2,616, of which 2,444 were of household workers. There were 2,568 men and 1,897 women placed in regular employment during the month.

#### ONTARIO

Opportunities for employment, as indicated by orders received at employment offices in Ontario during October, were over 14 per cent less favourable than in the preceding month, but over 2 per cent better than during the corresponding month of last year. There was a decline in placements of over 12 per cent when compared with September, but a gain

of 5 per cent in comparison with October, 1934. Placement gains over October last year were reported in highway construction, farming, manufacturing and services, while there were losses of smaller magnitude in logging, transportation, mining and trade, there being a net gain for the province as a whole, as indicated above. Placements by industrial divisions included manufacturing 706, logging 555, farming 1,476, transportation 93, construction and maintenance 6,421, trade 280 and services 3,849, of which 2,479 were of household workers. Placements in regular employment numbered 6,194 of men and 1,561 of women.

#### MANITOBA

Positions offered through employment offices in Manitoba during October were nearly 63 per cent more than in the preceding month and 32 per cent above the corresponding month of last year. Placements also were higher being nearly 68 per cent above September, 1935, and nearly 32 per cent above October, 1934. Increased placements under construction and maintenance accounted for the gain over October of last year, as declines in farming and logging more than offset gains in all other groups. Industrial divisions in which most of the placements were effected during the month were logging 170, farming 393, mining 70, transportation 71, construction and maintenance 2,676 and services 746, of which 578 were of household workers. There were 3,351 men and 369 women placed in regular employment during the month.

#### SASKATCHEWAN

Employment opportunities, as indicated by orders received at employment offices in Saskatchewan during October, were over 52 per cent less favourable than in the preceding month and nearly 6 per cent below the corresponding month of last year. There was a decline also in placements of nearly 49 per cent when compared with September and of over 4 per cent in comparison with October, 1934. The only changes of importance in placements from October of last year were losses in construction and maintenance and mining, which were largely offset by gains in farming and manufacturing. Industrial divisions in which most of the placements were effected during the month were manufacturing 63, farming 745, construction and maintenance 723, trade 51 and services 796, of which 538 were of household workers. Placements in regular employment numbered 1,458 of men and 330 of women.

## ALBERTA

Orders received at employment offices in Alberta during the month of October called for over 6 per cent less workers than in the preceding month, and over 7 per cent less than during the corresponding month of last year. Declines in placements were also reported of over 3 per cent when compared with September and of 7 per cent in comparison with October, 1934. Placements in construction and maintenance and farming were considerably less than during October of last year and a minor loss was reported in logging. All other industrial groups showed improvement, but these gains were not in sufficient volume to offset the declines referred to above. Placements by industrial divisions included farming 1,275, mining 130, construction and maintenance 1,227 and services 582, of which 440 were of household workers. During the month 2,209 men and 326 women were placed in regular employment.

## BRITISH COLUMBIA

There was a gain of over 15 per cent in the number of positions offered through the employment offices in British Columbia during October when compared with the preceding month, but a decline of over 14 per cent in comparison with the corresponding month of last year. Similar percentages of change were reported in placements under both comparisons. The decline in placements from October, 1934, was due to fewer men being sent to relief work on highway construction, as a small decrease in logging was the only other loss reported. Of the gains in all other groups, those in farming and services were the largest. Placements by industrial divisions included manufacturing 62, farming 164, construction and maintenance 2,379 and services 701, of which 397 were of household workers. Regular employment was found for 1,655 men and 242 women during the month.

## Movement of Labour

During the month of October, 1935, the offices of the Employment Service of Canada effected 22,911 placements in regular employment, 9,180 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 610 were granted the Employment Service reduced transportation rate, 429 going to centres within the same province as the despatching office, and 181 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of \$4, is

granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Quebec during October 64 persons secured certificates for reduced transportation, all of whom were bushmen proceeding from Hull to the Pembroke zone. Offices in Ontario granted 325 vouchers for reduced transportation during October, these entirely for provincial points. Travelling to employment within their respective zones the Port Arthur office was instrumental in transferring 123 highway construction workers, 118 bushmen, 12 mine workers, one hotel cook, and one hoisting engineer, Sudbury 43 bush workers, and Fort William 24 bush workers and one mechanic. The balance of this provincial movement was from Pembroke, from which centre one dairy farm worker journeyed to Timmins and one highway construction worker to a point within the Sudbury zone. Manitoba transfers at the reduced rate during October numbered 128, of which 11 were provincial and 117 inter-provincial. All of these were effected by the Winnipeg office, which despatched provincially 6 mine workers, 2 farm hands, one tractor operator, one bushman and one fisherman to employment within its own zone. Travelling outside the province the movement was to the Port Arthur zone and included 115 bushmen and 2 mine workers. Saskatchewan offices issued 24 reduced rate certificates during October, all of which were to points within the province. For situations within their respective zones the Yorkton office despatched 15 bushmen and the Regina office 2 teachers. From Saskatoon 2 bushmen, one farm hand, and one farm housekeeper were conveyed to Prince Albert and 3 farm hands within the Saskatoon zone. The Alberta labour trend during October was entirely to provincial points and comprised the transfer of 63 workers. On certificates secured at Edmonton 2 farm hands journeyed to Drumheller, and 30 highway construction labourers, 6 bush workers, 3 miners, 3 farm hands, 2 hotel employees, 2 housekeepers, one café waitress, one labourer, and one electrician to various centres within the Edmonton zone. Granted certificates at the Calgary office 10 mine teamsters were conveyed to Drumheller and 2 loggers to Edmonton. Reduced rate certificates were issued by British Columbia offices during October to 6 persons, these destined to provincial employment. From Vancouver the transfers were of mine workers, 2 each going to the Penticton and Kamloops zones, and one within the

territory covered by the Vancouver office. The one remaining was of a farm hand sent from Prince Rupert to a point within the same zone.

Of the 610 workers who were carried at the Employment Service reduced transportation

rate during October, 280 travelled by the Canadian National Railways, 326 by the Canadian Pacific Railway, 3 by the Northern Alberta Railway, and one by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada During October, 1935

The estimated value of the building authorized by 58 cities during October was \$4,020,308; this was an increase of \$698,282 or 21.0 per cent, as compared with the September total of \$3,322,026, and of \$1,422,284 or 54.7 per cent, as compared with the aggregate of \$2,598,024 for October, 1934.

The value of the building authorized in each month of the present year has been higher than in the same month of 1934, while since January, the aggregate for each month has also exceeded that for the corresponding month in 1933. The cumulative total for the first ten months of 1935 is higher than in any of the last three years, standing at \$40,530,687, as compared with \$22,313,170 in the months January-October, 1934, \$18,169,066 in 1933 and \$38,196,769 in 1932. Although the improvement indicated in the present year is partly due to the granting of construction permits for public buildings in several centres as an unemployment relief measure, the movement in general building operations has also been distinctly more favourable than in the last few years. In comparison with earlier years of the record, from 1920 to 1931, however, the value of building authorizations continues low. The index number of wholesale prices of building materials during the elapsed months of 1935, at 82.1 per cent of the 1926 basic average, was lower than in the same period of any preceding year for which building statistics for the 61 cities are on record, with the exception of 1932 and 1933.

Some 50 cities furnished detailed statistics, showing that they had issued more than 400 permits for dwellings estimated to cost approximately \$1,200,000 and about 1,500 permits for other buildings valued at almost \$2,500,000. In addition, 2 cities authorized engineering projects valued at \$33,244. During September, authority was granted for the erection of about 235 dwellings and 1,600 other buildings, the estimated cost being approximately \$1,000,000 and \$1,700,000, respectively.

Nova Scotia, Quebec, Ontario and British Columbia recorded increases in the value of authorized building as compared with September, 1935, that of \$673,237 or 115.4 per cent in Quebec being greatest. The largest decrease in this comparison was in Saskatchewan, where the value of the building repre-

sented by the permits taken out declined from \$490,984 in September, to \$17,855 in October.

In comparison with October, 1934, there was improvement in Prince Edward Island, Nova Scotia, Quebec, Ontario and British Columbia. Quebec reported the most pronounced increase, amounting to \$632,374 or 101.3 per cent.

Montreal, Toronto and Vancouver showed increases as compared with September, 1935, and their totals were also higher than in October, 1934; in Winnipeg, there was an improvement over September, 1935, but a decline as compared with October, 1934. Of the other centres, Halifax, Quebec City, Shawinigan Falls, Belleville, Brantford, Guelph, Kingston, Kitchener, London, Ottawa, Peterborough, York and East York Townships, Welland, Riverside, Woodstock, Brandon, Lethbridge, Kamloops and New Westminster reported increases over both September, 1935, and October, 1934.

*Cumulative Record for First Ten Months, 1935.*—The following table gives the value of the building authorized by 58 cities during October and in the first ten months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first ten months of the year since 1920 are also given (average 1926=100).

Year	Value of permits issued in October	Value of permits issued in first ten months	Indexes of value of permits issued in first ten months (1926=100)	Average indexes of wholesale prices of building materials in first ten months (avge. 1926 = 100)
1935.....	\$40,020,308	\$40,530,687	30.0	82.1
1934.....	2,598,024	22,313,170	16.5	82.8
1933.....	1,775,052	18,169,066	13.5	77.8
1932.....	3,170,570	38,196,769	28.3	77.5
1931.....	8,422,627	97,045,622	71.9	82.4
1930.....	12,756,402	139,117,752	103.1	92.0
1929.....	18,073,378	204,084,467	151.3	99.2
1928.....	21,558,085	187,179,719	138.8	96.8
1927.....	18,848,019	160,000,554	118.6	96.2
1926.....	14,738,402	134,902,338	100.0	100.4
1925.....	11,312,644	109,676,825	81.3	103.0
1924.....	13,089,588	100,906,921	81.5	107.6
1923.....	9,999,187	118,319,159	87.7	111.8
1922.....	10,737,525	127,515,975	94.5	108.5
1921.....	10,491,228	99,064,670	73.4	125.2
1920.....	10,401,041	106,547,319	79.0	144.4

The aggregate for the first ten months of 1935 was higher by 81.6 per cent than in 1934, being also substantially higher than in 1933 and somewhat higher than in 1932. With these exceptions, the total was less

than in any other year of the record. The average index number of wholesale prices of building materials was also lower in 1935 than in any year from 1920 to 1931.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, November, 1935, summarized the employment situation as follows:—

EMPLOYMENT at October 21 showed an improvement as compared with a month earlier.

Employment improved in coal mining, the cotton, woollen and worsted, linen and hosiery industries, textile bleaching, printing, dyeing, etc., most of the clothing trades (including boot and shoe manufacture), engineering, ship-building, and ship-repairing, motor vehicle and aircraft manufacture, certain food manufacturing industries and dock and harbour service. On the other hand, employment declined in hotel, boarding house, etc., service, the distributive trades, the building industry, brick and tile manufacture, shipping service and tramway and omnibus service.

Among those workpeople, of ages 16-64, who were insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at October 21, 1935 (including those temporarily stopped as well as those wholly unemployed), was 14.6, as compared with 15.0 at September 23, 1935, and with 16.3 at October 22, 1934. The percentage wholly unemployed at October 21, 1935, was 12.7, as compared with 12.6 at September 23, 1935; while the percentage temporarily stopped was 1.9, as compared with 2.4. For males alone the percentage at October 21, 1935, was 16.6 and for females, 9.0; the corresponding percentages at September 23, 1935, were 17.0 and 9.5.

The estimated number of insured persons, aged 16-64, in employment in Great Britain at October 21, 1935, was 10,492,000. This was 14,000 more than a month before, and 279,000 more than a year before. The numbers in employment at October 21, 1935, were substantially reduced owing to a dispute involving stoppages of work at a number of collieries in South Wales and Monmouthshire.

At October 21, 1935, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,595,689 wholly unemployed, 238,866 temporarily stopped, and 81,835 normally in casual employment, making a total of 1,916,390. This was 42,220 less than

a month before, and 203,245 less than a year before. The total included 1,527,077 men, 62,762 boys, 273,935 women, and 52,616 girls.

The persons on the Registers included 836,824 persons with claims for insurance benefit; 738,286 insured persons with applications for unemployment allowances; 209,142 insured persons (including 23,059 insured juveniles under 16 years of age), not in receipt of insurance benefit or unemployment allowances, and 132,138 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at October 21, 1935, was 1,982,302.

### United States

Substantial gains in employment and payrolls were again reported for October both in manufacturing and non-manufacturing industries, according to statements issued by the Secretary of Labour following the monthly survey conducted by the United States Bureau of Labour Statistics. Approximately 250,000 workers were returned to employment in these combined industries in October, while weekly wage disbursements were \$8,200,000 greater than in the preceding month.

*Manufacturing Industries.*—There was a gain of 2.2 per cent in factory employment from September to October while payrolls increased 4.2 per cent.

The preliminary October employment index (85.3) shows an increase of 8.8 per cent or approximately 575,000 employees over the year interval. A similar comparison for pay rolls shows that the October pay-roll index (75.9) is 23.1 per cent higher than the October 1934 index, an increase of approximately \$28,600,000 in weekly wage payments. The outstanding gain in employment over the month interval was an increase of 25.1 per cent in the automobile industry and was due to increased production of new models. Pronounced seasonal gains were shown in the beet sugar industry (190.6 per cent) and cottonseed oil, cake, and meal (24.7 per cent). The electric and steam car building industry reported a gain of 19.4 per cent in number of workers and the lighting equipment, radio and phonograph, and wirework industries showed gains

ranging from 11.2 per cent to 12.9 per cent. Other industries reporting substantial percentage gains (ranging from 6.1 per cent to 7.7 per cent) in number of workers were hardware, tools, shipbuilding, aluminum manufactures, brass-bronze-copper products, jewellery, stamped and enamelled ware, and fertilizers. Gains of more than 5 per cent were shown in the steam and hot-water heating apparatus, steam railroad repair shop, and clock and watch industries. Smaller percentage gains in industries of major importance were: cotton goods, 3.8, knit goods, 3.0; electrical machinery, apparatus, and supplies, 2.8; woollen and worsted goods, 2.7; furniture, 2.1; blast furnaces-steel works-rolling mills, 1.3; newspapers, 1.3; women's clothing, 1.2; and foundries and machine shops, 1.1.

The most pronounced declines in employment over the month interval were due to seasonal recessions and were shown in canning and preserving, 41 per cent; ice cream, 10.9 per cent, millinery, 9.6 per cent; beverages, 5.2 per cent; butter, 4.5 per cent; fur-felt hats, 4.4 per cent; and boots and shoes, 3.8 per cent. Among the remaining 14 industries in which decreases were reported, the declines in 8 instances were less than 1 per cent.

The durable goods group of industries continued the expansion recorded in the preceding two months with an employment increase of 5.2 per cent. Employment in this group in October was 19.1 per cent above the level of October of a year ago. In the nondurable goods industries, small declines in employment were reported, due largely to seasonal recessions. The employment index for the durable goods group stood at 74.9 in October, which is the highest point registered since December 1930 and indicates that for every thousand workers employed in the index-base period (1923-1925=100), 749 were employed in October 1935. The October employment index of the nondurable goods group (96.4) shows that for each thousand workers employed in the index-base period, 964 were on factory pay rolls in October 1935.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In October 1935, reports were received from 23,622 establishments employing 3,960,715 workers whose weekly earnings were \$85,357,953. The employment reports received from these co-operating establishments cover nearly 55 per cent of the total wage earners in all manufacturing industries of the country and more than 60 per cent of the wage earners

in the 90 industries included in the Bureau of Labour Statistics' monthly survey.

*Non-manufacturing Industries.*—"Based on reports received from 51,584 retail trade establishments employing 847,675 workers in October, there was an estimated gain of over 75,000 employees in retail establishments. Seasonal activity in important lines of retail trade, particularly department, variety, general merchandizing, apparel and furniture stores, was a factor contributing to this expansion. Retail food stores also showed a slight gain in workers over the month interval.

"There was an estimated gain of 24,000 workers in wholesale trade establishments, based on reports received from 15,020 establishments employing 290,336 workers in October 1935. These combined reports showed a net gain of 1.8 per cent in employment, establishments in many important lines of wholesale trade reporting additional workers on their pay rolls.

"Substantial gains in employment were reported in anthracite mining (over 18,000 workers) and metalliferous mining (3,000 workers). The increase in the latter industry was particularly marked in copper mining. Smaller gains in workers were shown in year-round hotels, power and light companies, brokerage and insurance offices and electric-railroad and motor bus operation."

The most pronounced decrease in employment was in the bituminous coal mining industry in which it was estimated that nearly 13,000 fewer workers were on the pay roll during the October 15 pay period than in the same period in the preceding month. This decrease was due primarily to strikes in a number of mines during the October pay period. As the reported information relates to the pay period ending nearest the 15th of the month, the effect of the general strike which occurred in the latter part of September is not reflected in these figures. Laundries showed a seasonal decline in employment (1.3 per cent) indicating 2,600 fewer employees in this industry in October than in September and smaller losses in number of workers were reported in the telephone and telegraph, crude petroleum producing, and dyeing and cleaning industries and banks. Employment in the private building construction industry remained practically stationary from September to October.

*Public Employment.*—Employment at the site of construction projects financed from the Emergency Relief Act of 1935 increased by more than 300,000. There were more than 650,000 workers employed on this program on

October 15. Monthly pay rolls totalled nearly \$31,000,000.

*Private Building Construction.*—Employment in the private building construction industry remained practically unchanged from September to October. Based on reports received from 9,851 contractors employing 92,747 workers in October 1935, there was a decline of less than one-tenth of 1 per cent in employment

and a gain of 0.1 per cent in pay rolls. The figures relate to employees engaged in the erection, alteration, and repairing of buildings and do not include projects financed by the Public Works Administration or Reconstruction Finance Corporation funds, regular appropriations of the Federal, State and local governments, or by loans insured by the Federal Housing Administration.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wage Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wage scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district; or fair and reasonable hours. These "A" conditions, in so far as wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the LABOUR GAZETTE of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour

conditions for the protection of the work-people employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which

render it contrary to the public interest, to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Supply and installation of a steam heating system in the Filling Group, Dominion Arsenal, Valcartier, P.Q. Name of contractors, O. Picard & Fils, Inc., Quebec, P.Q. Date of contract, November 28, 1935. Amount of contract, \$27,615. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Riggers (millwrights).....	\$0 60	8
Bricklayers (boiler setters).....	0 80	8
Steamfitters.....	0 65	8
Stoker mechanics.....	0 65	8
Oil burner mechanics.....	0 65	8
Labourers.....	0 40	8
Cement workers.....	0 55	8
Electricians.....	0 65	8
Carpenters.....	0 60	8
Bricklayers' helpers.....	0 40	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

*Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of November, 1935, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Safety razors.....	The Gillette Safety Razor Co. of Canada, Ltd., Montreal, P.Q.
Drab serge.....	Paton Manufacturing Co., Ltd. Montreal, P.Q.
Gabardine.....	Paton Manufacturing Co., Ltd., Montreal, P.Q.
Waterproof cloth.....	Canadian Industries Ltd., New Toronto, Ont.
Hand towels.....	Stauffer Dobbie Ltd., Galt, Ont.
Housewives.....	Grant-Holden Graham Ltd., Ottawa, Ont.
Kitchen and service equipment.	Wrought Iron Range Co., Ltd., Toronto, Ont.
Socks.....	George F. Hanson, Hull, P.Q.
Moleskin.....	Montreal Cottons Ltd., Montreal, P.Q.
Drab cloth.....	Paton Mfg. Co., Ltd., Montreal, P.Q.
Canvas shoes.....	Great West Felt Co., Elmira, Ont.
Mackinaw coats.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Blue serge jackets.....	Workman Uniform Co., Ltd., Montreal, P.Q.

Concrete mixer operator.....	0 60	8
Labourers.....	0 45	8
Motor truck driver.....	0 50	8
Plumbers and steamfitters.....	1 00	8
Teamster, team and wagon.....	1 00	8
Teamster.....	0 45	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 hours per week, such lesser hours shall not be exceeded on this work.

Installation of heating and plumbing systems in the new Physics and Engineering Laboratory for the National Research Council, New Edinburgh, Ottawa, Ont. Name of

contractors, W. G. Edge Ltd., Ottawa, Ont. Date of contract, November 12, 1935. Amount of contract, \$10,300. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hr.	per day
Plumbers and steamfitters.....	\$0 75	8
Labourers.....	0 40	8
Teamster, team and wagon.....	0 80	8
Teamster.....	0 40	8
Motor truck driver and truck.....	1 45	8
Motor truck driver.....	0 45	8

N.B.—Where, by agreement or current practice the working hours of any class of workers are less than 48 per week such lesser hours shall not be exceeded on this work.

Dredging work at Byng Inlet, Ontario. Name of contractors, The Canadian Dredge & Dock Co., Ltd., Midland, Ont. Date of contract, October 22, 1935. Amount of contract, approximately \$70,915.50. The General Fair Wages Clause was inserted in the contract.

### Consumers' Co-operation in the United States

A review of the Consumers' Co-operative movement in the United States is given in a recent issue of the *Labour Information Bulletin*, issued by the United States Department of Labour. This service indicates that some forty countries have consumers' co-operative societies of various kinds with a combined membership of more than 100,000,000 persons. It points out that the United States was one of the first countries to follow the lead of the Rochdale Pioneers (*Labour Gazette*, July, 1934, page 588).

The most common form of consumers' co-operation in the United States, as elsewhere, has been the co-operative store. Goods for the store are purchased in wholesale lots with money subscribed by members of the co-operative. The goods are sold to members at prevailing prices and all income above cost is refunded to them.

No figures are available to show the exact number of co-operative societies existing in the United States. Incomplete records of the Bureau of Labour Statistics showed some 1,800 consumers' societies in operation at the end of 1933, but, undoubtedly, there were many more in existence, which had not been reported to the Bureau. In the intervening

### Contracts in Group "B" (Interior Fittings, etc.)

Interior fittings in public building at Georgetown, Ont. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, November 21, 1935. Amount of contract, \$978. The "B" Labour Conditions above-mentioned were inserted in the contract.

Alterations and additions to the interior fittings of the public building at Estevan, Sask. Name of contractors, R. L. Cushing Millwork Co., Ltd., Moose Jaw, Sask. Date of contract, November 7, 1935. Amount of contract, \$750. The "B" Labour Conditions above-mentioned were inserted in the contract.

### ROYAL CANADIAN MOUNTED POLICE

#### Contracts in Group "B" (Manufacture of Supplies, etc.)

Contracts were awarded during November by the Royal Canadian Mounted Police, under the "B" labour conditions as follows: to the Dominion Textile Co., Ltd., Montreal, P.Q., for the supply of khaki broadcloth; and to The C. Turnbull Co., Ltd., Galt, Ont., for the supply of light weight undershirts and drawers.

2 years since 1933 a very large number of new societies have also been formed.

A general survey by the Bureau of Labour Statistics, covering the 1933 experience of all types of co-operative enterprises, except the farmers' marketing associations, showed that the 724 societies for which data were available had a combined membership of approximately 328,000. Their share capital totalled nearly \$7,900,000 and their accumulated reserves \$3,883,000. Their total resources for 1933 aggregated \$22,000,000 and the business done by them \$42,000,000.

The special committee appointed to report on a modified scheme of health insurance for British Columbia recently submitted its recommendations to Hon. G. M. Weir, Provincial Secretary. (The draft bill on health insurance introduced in the British Columbia Legislature to form a basis of discussion from which a measure might be formulated, was referred to in the *LABOUR GAZETTE* for May, page 394.) Details of the committee's report were not made public. The committee heard representations on the subject from all interested parties. It is understood that of the 139 submissions from organizations and individuals, the point arousing most interest dealt with the class of persons that should come under the scheme.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A summary is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Food, Drink and Tobacco

**TORONTO, ONTARIO.**—CERTAIN EMPLOYING BAKERS (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL No. 181.

Agreement to be in effect from April 20, 1935, to April 20, 1936, and thereafter until a new agreement made or this one cancelled.

Only union members to be employed, if available. The union label to be put on each loaf of bread.

Hours: 8 per day, a 48 hour week. No work on the specified Jewish holidays.

Wages per week: foreman or first hand \$36, second hand \$32, third hand \$28. Jobbers to be paid 75 cents per hour.

**WINNIPEG, MANITOBA.**—CERTAIN BAKERIES IN THE NORTHERN SECTION OF WINNIPEG, AND THE BAKERS AND DRIVERS SECTION, FOOD WORKERS' INDUSTRIAL UNION.

Agreement reached following the strike in a number of bakeries reported on page 1091 of this issue.

Agreement to be in effect from November 21, 1935, to June 1, 1936. If any change desired, parties to give notice 30 days before expiration date.

Employers recognize the union and also the shop committee. Only union members to be employed. Shareholders at present employed are to be bound by the agreement and no additional shareholders are to be employed. No baker or driver to be discharged without the approval of the union.

Hours: 48 per week.

Minimum wages per week for bakers: head bakers \$24, bakers \$18, benchmen \$15, helpers \$12; cake makers 35 cents per hour.

Drivers to be paid on commission, one cent per loaf for wholesale and retail sales. Drivers who sell from 1,300 to 1,500 loaves, 85 per cent of which are retail, to be paid a weekly wage of \$15. Where the drivers received a weekly wage prior to this agreement, the scale is not to be lowered.

The responsibility for credit to be assumed by the employers.

During slack period, there shall be equal distribution of work.

Disputes or grievances to be taken up first with the shop committee, and if no settlement reached, then with the union representatives.

**FERNIE AND CRANBROOK, B.C.**—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 308.

Agreement to be in effect from June 1, 1935, to May 31, 1937. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE* December, 1934, page 1148 and August, 1932, page 922, with the following exception:

Although the minimum wage rates for brewery workers are unchanged from the 1933 to 1935 rates, the wage rate for the first engineer is reduced to \$160 from \$167 per month and of second engineer to \$150 from \$157 per month, and the hours of engineers are limited to 48 per week with no daily limitation of hours.

**VICTORIA, B.C.**—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 280.

Agreement to be in effect from January 1, 1935, to December 31, 1935.

Only union members to be employed, if available. No discrimination to be shown employees on account of union activity. Union made materials to be given preference, the union labels to be placed on barrels and to be optional on the bottle label.

Hours: 48 per week. Engineers and firemen, after one year's service to be entitled to two weeks' vacation each year, with pay.

Work on Sundays and eight specified holidays, double time.

Minimum wages per week: brewhouse, workhouse and cellarmen \$29.50; bottlers, machine operators and packers \$29; spare help, under six months \$26; apprentices \$19 for first year and \$21 for second year, truck drivers \$29.50, helpers on trucks \$28.50, firemen \$27.60; firemen working engineer's shift \$30; engineers (other than chief) \$30. Employees receiving higher wages than these are not to have their wages reduced.

One apprentice allowed for every ten men of the regular working staff.

Provision is made for the arbitration of any disputes.

### Manufacturing: Pulp, Paper and Paper Products

**THOROLD, ONTARIO.**—ONTARIO PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND OTHER UNIONS

The agreement which came into effect June 24, 1934, and was summarized in the *LABOUR GAZETTE*, October, 1934, page 964, was renewed until May 1, 1936.

**FORT WILLIAM, ONTARIO.—GREAT LAKES PAPER COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, AND OTHER UNIONS.**

The agreement is in effect from July 1, 1935, to May 1, 1936 and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, July, 1934, page 701, July, 1933, page 730 and October, 1932, page 1110. Under the 1934 agreement, wage rates were increased by  $7\frac{1}{2}$  per cent on June 17, 1934 at the same time as a similar rise in other paper mills. The new agreement continues the wage rates which came into effect June 17, 1934.

**KENORA AND FORT FRANCES, ONTARIO.—KENORA PAPER MILLS LIMITED, FORT FRANCES PULP AND PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPERMAKERS, LOCALS NOS. 238 (KENORA) AND 306 (FORT FRANCES).**

Agreement to be in effect from May 1, 1935, to April 30, 1936, and thereafter from year to year until notice.

Union members to be employed, if available. Others employed to join the union.

Hours: 8 per day, a 48 hour week.

Overtime on other than tour work: time and one-half. Work on three specified holidays, time and one-half.

Wages vary with the speed of the machines. Wages per hour in Fort Frances: machine tenders \$1.16 and \$1.46, back tenders \$1 and \$1.29, third hands 77 cents and 96 cents, fourth hands 57 cents and 60 cents, fifth hands 51 cents and 52 cents, sixth hands 48 cents, oiler 56 cents. Wages per hour at Kenora: machine tenders \$1.43 and \$1.46, back tenders \$1.26 to \$1.29, third hands 94 cents and 96 cents, fourth hands 60 cents, fifth hands 52 cents, sixth hands 45 cents. Wage rates in both Kenora and Fort Frances: boss machine tender to receive 10 cents per hour over highest paid machine tender, beater engineer 84 cents, clothing man 96 cents, rewinder man 77 cents, rewinder helper 48 cents (Fort Frances only), oilers 56 cents.

### Manufacturing: Printing and Publishing

**CALGARY, ALBERTA.—ONE DAILY NEWSPAPER PUBLISHER AND THE CALGARY NEWSPAPER PRINTERS' ASSOCIATION, LOCAL NO. 1, CANADIAN PRINTERS' UNION.**

Agreement to be in effect from July 8, 1935, to July 7, 1938, and thereafter from year to year until notice.

Hours: 45 per week for day or night work.

Wages for journeymen compositors: 85 cents per hour for day work. Night scale \$2.40 per week additional; lobster shift \$4 per week over the day scale.

Wages for apprentices: from 25 per cent of journeymen's scale during first and second years to 70 per cent during sixth year.

**EDMONTON, ALBERTA.—DAILY NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 604.**

Agreement to be in effect from May 6, 1935, to May 15, 1937, and thereafter from year to year until notice.

Only union members to be employed.

Hours: 45 per week for both day and night work.

Overtime: time and one-half for overtime and for work on six specified holidays; double time for work on Sundays and Christmas Day.

Minimum wages for journeymen in the composing room: 85 cents per hour for day work; night work \$2.40 per week additional; lobster shift \$4 per week over the day scale.

Apprentices limited to one to every seven journeymen. They must serve six years.

Wages for apprentices from 25 per cent of journeymen's scale during first and second years to 70 per cent during sixth year.

Provision is made for a standing joint committee and for the arbitration of disputes.

### Manufacturing: Textiles and Clothing

**WINNIPEG, MANITOBA.—CERTAIN CAP MANUFACTURING FIRMS AND THE UNITED HATTERS, CAP AND MILLINERY WORKERS' INTERNATIONAL UNION, LOCAL NO. 15.**

Agreement to be in effect from September 9, 1935, to September 9, 1936. Parties to meet 30 days before expiration to renew or revise the agreement.

Only union members to be employed, if available. Firms who are parties to this agreement may use the union label.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one-half.

Wages: at the beginning of each season, representatives of the union to meet the firm to adjust the wages of those who are entitled to such adjustment.

In the slack season, work in the shop to be divided as equally as possible.

No worker to be discharged without sufficient cause nor until there is an opportunity of a joint investigation. The decision of the Arbitration Board made up of representatives of each party and an impartial chairman to be final and binding.

A strike in one establishment over the interpretation of this agreement and over the employment of non-union workers is reported on page 1090 of this issue and resulted in a supplementary agreement for this firm providing for increased wages for some workers, with a minimum of \$11 per week for female employees after six months service with the employer. Overtime over 44 hours in the week to be paid at time and one-quarter. Experienced workers to be secured through the union, if available, or if not and they are engaged from outside the union they must join it. The employers may however engage inexperienced workers directly.

### Construction: Buildings and Structures

**KINGSTON, ONTARIO.—CERTAIN CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL NO. 249.**

Agreement to be in effect from July 1, 1935, to March 1, 1936, and thereafter from year to year until notice of change given by either party.

The business agent of the union to have access to the job, with the permission of the superintendent.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime to be mutually agreed on: work on Sundays and holidays, double time.

Wages for journeymen carpenters: 75 cents per hour. If a 40 hour week is later agreed on, wages to be raised to 85 cents per hour.

A joint arbitration board to be formed for the settlement of disputes.

**TORONTO, ONTARIO.—CERTAIN FIRMS AND THE INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL NO. 10.**

Agreement to be in effect from August 1, 1935, to May 1, 1936. Notice of any change or desire to renew agreement to be given 90 days before expiration date.

Only union members to be employed, if available.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime and work on Sundays and holidays, time and one-half, except Labour Day when only emergency work may be done and that at triple time.

Wages per hour: mechanics 75 cents; improvers 35 cents during first year, 45 cents during second year and 55 cents during third year.

One improver allowed to each mechanic in a shop. Improvers may not try mechanic's examination until they have been four years in the trade.

For work outside city, fare and board to be paid by employer.

No strike or lockout to occur except when of a general nature. Dispute to be referred to arbitration.

**VANCOUVER, B.C.—CUT STONE CONTRACTORS AND JOURNEYMEN STONECUTTERS ASSOCIATION.**

Agreement to be in effect from May 15, 1935, to May 15, 1937. Three months' notice to be given by either party of a change.

Hours: 8 per day, 5 days a week, a 40 hour week.

Wages for stonecutters: \$8 per day of 8 hours. Stonecutters sent out on the job to be paid 50 cents per day extra. Carvers to receive \$2 per day extra. Wages to be adjusted annually.

### **Transportation and Public Utilities: Water Transportation**

**SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCALS NOS. 273, 810 AND 1039 (3 AGREEMENTS).**

The agreement for Local 273 (longshoremen) is to be in effect from November 1, 1935, to October 31, 1936, and thereafter from year to year until notice. The agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1934, page 1150, January, 1934, page 74, March, 1933, page 332, December, 1931, page 1358, and December, 1930, page 1456, with the exception of the wage scale which is increased from 68 to 70 cents per hour for general cargo and from 78 to 80 cents per

hour for bulk cargoes, over the rates which came into effect a year ago.

The coal handlers' agreement (Local 810) is in effect for the same period as the above longshoremen's agreement. It is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1934, page 1150, and March, 1933, page 332, with the exception of certain changes in working conditions and with a wage increase over last year's rates from 72 cents to 80 cents per hour for day work and from 90 cents to \$1 per hour for night work.

The shipliners' agreement (Local 1039) is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1934, page 1150, and March, 1933, page 333, with the exception of an increase in wages from 59 to 65 cents per hour for day work and from 88 to 97½ cents per hour for night work.

### **Service: Recreational**

**TORONTO, ONTARIO.—CERTAIN THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL NO. 173.**

The agreement covering moving picture machine operators is in effect from September 1, 1935, to September 1, 1937, and is the same as the one previously in effect which was summarized in the LABOUR GAZETTE, November, 1934, page 1063.

### **Quebec Collective Labour Agreements Extension Act**

The following agreements and amendments to agreements in the Province of Quebec have recently been made obligatory by Orders in Council and the terms so made obligatory are summarized in the article beginning on page 1156 of this issue:—

Cloakmakers, Province of Quebec.

Barbers and Hairdressers, St. Johns and Iberville.

Barbers and Hairdressers, Quebec (Amendment).

Barbers and Hairdressers, Shawinigan and Grand'Mère (Amendment).

### **Industrial Standards Act of Ontario**

The following schedules have been made binding by Order in Council and the terms summarized in this issue in the article beginning on page 1158:—

Cloakmakers, Province of Ontario.

Bricklayers and Stonemasons, Windsor.

Carpenters, Windsor.

Plasterers, Windsor.

Common Labourers (building), Windsor.

Electricians, London.

Plumbers, London.

## COLLECTIVE LABOUR AGREEMENT EXTENSION ACT OF QUEBEC

### Agreements Recently made Obligatory and Further Applications

**R**ECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the same industry or business and in the same district, by Orders in Council, of two agreements which are summarized below, a correction to an Order in Council previously passed and Orders in Council amending previous orders, which are also noted below. Notices of application for changes in agreements already in effect under Orders in Council have appeared in the *Quebec Official Gazette* as follows: glove makers throughout the Province and harbour workers at Montreal in the issue of November 16; shoe workers throughout the Province, bakers and bakers' deliverymen at Quebec in the issue of November 23.

The text of the Collective Labour Agreement Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been ap-

proved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements, have been summarized instead of being printed in full.

**WOMEN'S CLOAK AND SUIT INDUSTRY, PROVINCE OF QUEBEC.**—An Order in Council, approved November 7 and published in the *Quebec Official Gazette*, November 9, makes obligatory the terms of an agreement between The Association of Manufacturers of Cloaks, Suits and Ladies' Garments, of the City of Montreal, known as "The Manufacturers' Council and representing certain manufacturers who are named in the agreement, and The International Ladies' Garment workers Union and the Montreal Joint Council of the Cloak, Suit and Dressmakers' Union.

The territorial jurisdiction comprises the whole Province of Quebec.

The industrial jurisdiction consists of the manufacture of women's cloaks, coats and suits of all materials and of separate skirts (not a part of a suit) made of woollen materials of a minimum specified weight, except that the manufacture of cloaks, coats and suits made for children up to the age of 14 years, if they are made by the same method as clothing for the two sexes and if made by a manufacturer, contractor or jobber not principally engaged in the production of cloaks, coats and suits for women, and if not made to evade the conditions of the agreement, are not covered by this agreement.

The agreement is in effect from November 18, 1935, to July 1, 1937, and shall be renewed automatically unless one of the parties gives notice of amending or cancelling it ninety days before the expiration date.

This agreement supersedes all individual agreements, but not the collective agreements now existing between the same parties, except that in no case may the wages paid be less nor the hours of work more than are fixed in this agreement.

Hours: until January 1, 1936, 8 per day, 4 on Saturdays, a 44 hour week; from and after January 1, 1936, 8 per day on the first five days of the week, no work on Saturdays, a 40 hour week. It is however provided that the 40 hour week and the wage rates provided for same shall go into effect only when and if they become legally effective in the Province of Ontario (see, page 1158).

Provision is made for the maximum amount of overtime allowed during the busy seasons and the elimination of overtime in the slack seasons with certain exceptions.

Definitions of the different classes of workers are given in the agreement.

Minimum wages per hour: fully skilled cutters—until December 31, 1935, 77 cents, from and

after January 1, 1936, 80 cents; semi-skilled cutters—until December 31, 1935, 50 cents, from and after January 1, 1936, 55 cents; trimmers—until December 31, 1935, 55 cents, from and after January 1, 1936, 60 cents; fur tailors—until December 31, 1935, 60 cents, from and after January 1, 1936, 65 cents; assistant fur tailors—until December 31, 1935, 40 cents, from and after January 1, 1936, 44 cents; button sewers and general hands and examiners—until December 31, 1935, 31 cents, from and after January 1, 1936, 34 cents.

The following classes of workers may work on a piece-work basis, piece rates to be computed to yield at least the following rates: jacket, coat and reefer operators, top pressers and machine pressers—until December 31, 1935, 75 cents, from January 1, 1936, 80 cents; under pressers—until December 31, 1935, 68 cents, from January 1, 1936, 75 cents; semi-skilled operators—until December 31, 1935, 50 cents, from January 1, 1936, 55 cents; piece pressers—until December 31, 1935, 42 cents, from January 1, 1936, 45 cents; machine basters, hand basters and special machine operators—until December 31, 1935, 40 cents, from January 1, 1936, 44 cents; lining makers, finishers and skirt makers—until December 31, 1935, 38 cents, from January 1, 1936, 42 cents. For female operators it is provided that skilled female operators be paid a minimum of 20 per cent below the skilled male operators' minimum, that female semi-skilled operators be paid a minimum of 10 per cent below the semi-skilled male operators' minimum. It is however provided that the wages or remuneration of any female operator of equal productivity or performing the same operation on piece-work basis as a male operator be equal to that payable to the male operator, and that the minimum scale for female section operators be the same as that of male section operators. Employers paying higher weekly wage rates or piece rates than those specified in the agreement are prohibited from reducing them during the existence of this agreement. No reduction to be made in the weekly rates of pay for week work because of reduction of hours provided by this agreement. The Board of Examiners to determine a special rate under the minimum for employees whose production is under normal.

Apprentices are limited to 5 per cent of the number employed in the factory. After three years in the trade, apprentices to be advanced into the next higher grade of their craft.

Wages for apprentice operators, pressers and cutters: beginners to start at \$7 per week, after 6 months \$9, after one year \$11, after 18 months \$14, after two years \$18, at end of 30 months \$20, at end of three years \$22.

Piece work prices may be fixed instead of week work rates providing the wages and hours fixed conform to those specified in the agreement and also that the rates fixed are equivalent to the rates for similar work in the majority of shops in the same zone. The Joint Committee to have the right whenever it deems any of the piece work prices fixed to be insufficient, to revise them.

No work to be given employees to be manufactured or worked on at home. No employer to make any individual agreement with any employee.

**BARBERS AND HAIRDRESSERS, ST. JOHNS AND IBERVILLE.**—An Order in Council, approved November 7 and published in the *Quebec*

*Official Gazette*, November 9, makes obligatory the terms of an agreement between Le Syndicat Professionnel des Maîtres-Barbiers et Coiffeurs de Saint-Jean et d'Iberville (The Professional Union of Master Barbers and Hairdressers of St. Johns and Iberville) and Le Syndicat Professionnel des Employés Barbiers et Coiffeurs de Saint-Jean et d'Iberville (The Professional Union of Employed Barbers and Hairdressers of St. Johns and Iberville).

The territorial jurisdiction comprises the city of St. Johns, the town of Iberville and the counties of St. Johns and Iberville and the village of Napierville.

The agreement is in effect from November 9, 1935, to November 8, 1938, and until a new agreement comes into effect. With the consent of the two parties, the Joint Committee may make any modification in the interest of the trade.

Hours: for barbers and barber hairdressers for men 56½ per week; for male and female hairdressers for ladies, 67 per week.

Minimum wage rates for regular time: for male barbers and hairdressers, \$13 per week plus 50 per cent of all receipts in excess of \$20 made by the employee in the week; female hairdressers \$7 per week, but in no case may female employees be paid less than the rates fixed by the Women's Minimum Wage Board. Extra employees to be paid 25 cents per hour plus 50 per cent of any receipts over \$5 made by the employee during the day. No employer to have the right to reduce the wages of an employee receiving more than the minimum rate at the time the agreement signed. For employees who work by the job, minimum rates are fixed for each piece of work. Any agreement made with the object of reducing the rate either per hour, job or contract to be null. Journeymen who due to advanced age or infirmity cannot give regular competent service may have their wage scale reduced by the Joint Committee.

Not more than one apprentice allowed in each parlour. Apprenticeship to consist of two years in a barber shop approved by the Joint Committee, and the apprentice must follow during these two years a course in hygiene for barbers according to the conditions imposed by the Joint Committee.

Wages per week for apprentices: after six months \$5, after one year \$7.50, after 18 months \$10.

**FURNITURE WORKERS, PROVINCE OF QUEBEC.**—In the original Order in Council which was summarized in the last issue of the *LABOUR GAZETTE*, among the articles listed whose manufacture comes under the agreement is the term "woodenware goods." This term has now been deleted by a correction which was published in the *Quebec Official Gazette*, November 23.

**BARBERS AND HAIRDRESSERS, QUEBEC.**—An Order in Council, approved November 7 and published in the *Quebec Official Gazette*, November 9, amends the original Order in Council (*LABOUR GAZETTE*, July, page 631) by

the addition of a number of master barbers and hairdressers to the parties and by extending the territorial jurisdiction to include the area within a radius of 20 miles of the city limits. The agreement is to be in effect until May 1, 1936, and shall be renewed automatically unless either party gives notice of change or of cancelling the agreement. Certain changes are made in the job rates.

**BARBERS AND HAIRDRESSERS, SHAWINIGAN AND GRAND'MÈRE.**—An Order in Council approved November 7 and published in the *Quebec Official Gazette*, November 9, amends the original Order in Council (*LABOUR GAZETTE*, August, page 732, amendment November, page 1065) by providing that ladies' hairdressers may work 6 hours longer per week, and by changing certain of the job work prices.

## INDUSTRIAL STANDARDS ACT OF ONTARIO

### Agreements Recently Approved by Orders in Council

**THE** Industrial Standards Act of Ontario, the text of which was printed in the *LABOUR GAZETTE*, June, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July issue of the *LABOUR GAZETTE*, summaries are given in this article of the schedules which have thus been approved.

**WOMEN'S CLOAK AND SUIT INDUSTRY, PROVINCE OF ONTARIO.**—An Order in Council dated October 5 and published in *The Ontario Gazette*, November 9, which was corrected by a later Order in Council dated November 9 and published in *The Ontario Gazette*, November 16, makes binding a schedule of wages and hours of labour on all those engaged in the cloak and suit industry throughout the whole Province of Ontario.

The schedule is in effect from November 18, 1935, to November 18, 1936.

The provisions relating to hours, overtime and wage rates (both weekly and piece rates, but not including apprentices' wages) are the same as in the Order in Council summarized in the preceding article in force under the *Quebec Collective Labour Agreements Extension Act*.

Regulations and wages for apprentices are not included in this agreement.

A Board to be formed by the Minister of Labour from the names suggested by the parties to the agreement and if the four thus selected cannot agree on a chairman, he will be appointed by the Minister. This Board may set lower wage rates for individual workers whose production is below normal.

This agreement is in no way to abrogate, prejudice or supersede any collective bargain or other agreement or arrangement between employers and employees in the industry, except that in all cases minimum wage rates and maximum hours provided in this schedule must be observed.

This schedule was only to become effective if the same wages and hours conditions were made effective in Quebec (see page 1156).

**BRICKLAYERS AND STONEMASONS, WINDSOR.**—An Order in Council dated November 14 and published in *The Ontario Gazette*, November 16, makes obligatory the terms of a schedule on all those engaged in the bricklaying and stonemasonry industry in a zone which includes the City of Windsor and the surrounding district which is defined in the Order in Council.

The schedule is in effect from November 26, 1935, to August 31, 1936.

Hours: 8 per day, with no work on Saturdays, a 40 hour week. When the second and third shifts equal 66½ per cent of the regular shift, 8 hours pay for seven hours work. Employees who may be required for emergencies or in connection with pouring of concrete on Saturdays to be permitted to work and to be paid straight time for morning and double time for Saturday afternoon and evening.

Overtime and all work on Sundays and six specified holidays, double time.

Wage rate for bricklayers and stonemasons: 90 cents per hour. Work contracted for and accepted prior to October 21, 1935, of which due notice has been given to the Board on or before November 30, 1935, may be completed

at a rate to be approved by the Board. The Board may set a rate less than the above for aged or handicapped workers.

Apprentices to be governed by the Ontario Apprenticeship Act.

**PLASTERERS, WINDSOR.**—An Order in Council dated November 14 and published in *The Ontario Gazette*, November 16, makes obligatory the terms of a schedule on all those engaged in plain and ornamental plastering in interior work or exterior work in a zone which includes the City of Windsor and the surrounding district which is defined in the Order in Council.

The schedule is in effect from November 26, 1935, to August 31, 1936.

The terms of this schedule are similar to those summarized above for the bricklaying and stonemasonry trade in Windsor, with the following differences:

The wage rate is the same, 90 cents, but all work contracted for prior to October 22, 1935, of which due notice has been given to the Board on or before November 30, 1935, may be completed at a rate set by the Board.

In case of emergency, consent may be given to work Saturday or nights by arrangement with the Board.

Overtime: time and one-half; Sundays and holidays, double time.

**CARPENTERS, WINDSOR.**—An Order in Council dated November 14 and published in *The Ontario Gazette*, November 16, makes binding the terms of a schedule on all those engaged in the carpentry trade, on building and construction work, in a zone which includes the City of Windsor and the surrounding district which is defined in the Order in Council.

The schedule is in effect from November 26, 1935, to August 31, 1936.

The terms of this schedule are similar to those summarized above for the bricklaying and stonemasonry trade in Windsor, with the following differences:

When work cannot be done during the day, it may be done as a night shift of not more than 8 hours, straight time.

Overtime: time and one-half for the first hour and double time thereafter; Sundays and holidays, double time.

Wages rate for carpenters and joiners: 80 cents per hour. All work contracted for and accepted prior to October 22, 1935, of which due notice has been given to the Board on or before November 30, 1935, may be completed at a rate approved by the Board.

**COMMON LABOURERS, WINDSOR.**—An Order in Council, dated November 14, and published in *The Ontario Gazette*, November 16, makes obligatory the terms of a schedule of wages and hours of labour on all those engaged as common labourers on construction work.

The schedule is in effect from November 26, 1935, to October 21, 1936.

Hours: 48 per week.

Work on Sundays and six specified holidays, double time.

Wage rate for common labourers on building and construction work: 50 cents per hour. Work contracted for and accepted prior to October 21, 1935, of which due notice has been given to the Board on or before November 30, 1935, may be completed at a rate to be approved by the Board. The Board may set a rate less than the above minimum rate for aged or handicapped workers.

**ELECTRICIANS, LONDON.**—An Order in Council, dated November 26, and published in *The Ontario Gazette*, November 30, makes binding the terms of a schedule of wages and hours of labour on all those engaged in the electrical repair and construction industry in a zone which includes the City of London and the surrounding district which is defined in the Order in Council.

The schedule is in effect from December 10, 1935, to November 5, 1936.

The schedule applies to all electricians engaged in the trade but does not include those working on the assembling, testing, inspecting, rebuilding, and repairing of any electrical motors or household appliances when done in electrical repair shops.

Hours: 8 per day, no work on Saturdays, a 40 hour week. The Board may permit employees who may be required for emergencies on Saturdays to work for straight time in the morning and double time in the afternoon and evening.

Overtime: time and one-half from 5 p.m. to 10 p.m.; thereafter double time. Work on Sundays and eight specified holidays, double time.

Wage rate for journeymen electricians: 80 cents per hour. The Board may set a rate less than this for aged or handicapped workers. Work contracted for and accepted prior to November 5, 1935, of which due notice has been given to the Board on or before December 4, 1935, may be completed at a rate to be approved by the Board.

Apprentices to be governed by the Ontario Apprenticeship Act. One apprentice allowed to every three journeymen in a shop.

**PLUMBERS, LONDON.**—An Order in Council, dated November 26, and published in *The Ontario Gazette*, November 30, makes binding the terms of a schedule of wages and hours of labour on all those engaged in the plumbing, steamfitting and hot water heating, gasfitting and the installation of all pipe work and fittings, but not including sprinkler fitting in a zone which includes the city of London and the surrounding district which is defined in the Order in Council.

The schedule is in effect from December 10, 1935, to November 5, 1936.

Hours: 8 per day, no work on Saturdays, a 40 hour week. However if men are required for emergency work, the setting of sleeves and inserts on Saturday morning it can be done at straight time, with a minimum of two hours' pay at straight time. In finishing up a repair job on regular working days, if to finish will not take more than one hour's time, it will be done at the regular time.

Overtime: time and one-half; Saturdays (not otherwise provided for) Sundays and eight specified holidays, double time.

Minimum wage rate for journeymen: 80 cents per hour; for fifth year junior mechanics, 55 cents. All work contracted for and accepted prior to November 5, 1935, of which due notice has been given to the Board on or before December 4, 1935, may be completed at a rate to be approved by the Board. The Board may

set a rate less than the regular minimum rate for aged or handicapped workers.

Apprentices to be employed in accordance with the Ontario Apprenticeship Act. Only one junior mechanic allowed to any shop in each branch of the trade except when there are more than five journeymen plumbers or five journeymen steamfitters employed when the ratio allowed is two junior mechanics to six journeymen, three to eleven journeymen and four to sixteen journeymen.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1935

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE upward movement in the cost of the weekly family budget in terms of retail prices was continued during the month, due chiefly to the higher cost of foods, while the Dominion Bureau of Statistics' index number of wholesale prices was slightly lower.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$8.04 at the beginning of November as compared with \$7.93 for October; \$7.58 for November, 1934; \$11.75 for November, 1929; \$11.08 for November, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.96 for November, 1914. The most important advances during the month occurred in the cost of eggs, butter and bread, while flour, lard, cheese and milk also showed small increases. The prices of beef, mutton, fresh pork, bacon, prunes and sugar were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$16.54 at the beginning of November as compared with \$16.42 for October; \$16.03 for November, 1934; \$15.41 for June, 1933 (the low point in recent years); \$22.03 for November, 1929; \$21.24 for November, 1926; \$21.60 for November, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.36 for November, 1914. Fuel was slightly higher, due chiefly to increased prices for anthracite coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, which has shown a continued upward movement since August, was slightly lower for November at 72.7 as compared with 73.1 for October and 71.5 for July. The decline was due chiefly to decreases in the Vegetable Products group and the Animal Products group, in the former because of lower prices for grains, flour and milled products which more than offset substantial increases in the prices of fruits and vegetables, and in the latter because of declines in the prices of hides and skins, live

stock and meats. Comparative figures for earlier dates are: 71.1 for November, 1934; 95.7 for November, 1929; 97.7 for November, 1926; 98.3 for November, 1921; 164.3 for May, 1920 (the post-war peak); and 67.2 for November, 1914.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, there being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively

(Continued on page 1168)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

birch. p Six-roomed houses not extensively occupied by workmen but some at \$35-\$50, according to condition and conveniences. r Mining company houses in district \$5-\$10 per month; others, five and six rooms, \$10-\$35 s Delivered from mines.

(Continued from page 1160)

large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show

the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

With exception of veal which advanced slightly in the average, meat prices generally showed a downward tendency. Beef prices continued to lower levels in most localities, sirloin steak being down in the average from 23·7 cents per pound in October to 22·7 cents in November, round steak from 19·4 cents per pound to 18·5 cents, rib roast from 17·3 cents per pound to 16·9 cents and shoulder roast from 12·7 cents per pound to 12·3 cents. Mutton was lower at an average price of 20·1 cents per pound in November as compared with 20·8 cents in October. Fresh pork was also lower averaging 22 cents per pound in November and 22·7 cents in October, decreases being more pronounced in Ontario than in the other provinces. Breakfast bacon declined in the average from 31·8 cents per pound in October to 31·2 cents in November and boiled ham from 53·6 cents per pound to 52·3 cents. Lard again advanced in the average from 18 cents per pound in October to 18·3 cents in November.

Egg prices were higher in practically all localities, fresh being up from an average price of 35·8 cents per dozen in October to 41·5

\*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

cents in November and cooking from 30.1 cents per dozen to 33.4 cents. Milk was again slightly higher at 10.3 cents per quart as compared with 10.2 cents in October. The price of butter continued to advance in all cities, dairy being up from 24.5 cents per pound in October to 24.9 cents in November and creamery from 27.1 cents per pound to 28.6 cents. Cheese advanced  $\frac{1}{2}$  cent per pound to 28.6 cents. The price of bread which has been unchanged in the average since April, rose from 5.9 cents per pound in October to 6 cents in November. Flour was again fractionally higher at 3.5 cents per pound. Potatoes were practically unchanged at \$1.08 per ninety pounds. Prunes declined  $\frac{1}{2}$  cents per pound in the average to 11.6 cents. Sugar reflected a small general decrease at an average price of 6.2 cents per pound. Anthracite coal averaged higher in November at \$14.76 per ton as compared with \$14.58 in October, increases being reported from many cities.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$15; Windsor,

\$16.50; Charlottetown, \$13.40; Moncton, \$16; Saint John, \$13.50; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$13.25; Montreal, \$14.25; Hull, \$16.25; Ottawa, \$16.25; Kingston, \$14.50; Belleville, \$14.50; Peterborough, \$16.50; Oshawa, \$14.75; Toronto, \$14.75; St. Catharines, \$14.50; Hamilton, \$14.50; Brantford, \$17; Galt, \$16.50; Windsor, \$12.50; Sudbury, \$17.50; Cobalt, \$17.75; Timmins, \$18; Sault Ste. Marie, \$14.50; Port Arthur, \$17; Fort William, \$17; Winnipeg, \$19.50.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The price of wheat moved downward during the month due in a large measure to unusually low European demand. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 85.7 cents per bushel in November as compared with 90.8 cents in October. In coarse grains, oats declined from 34 cents per bushel to 31.9 cents

and rye from 42.2 cents per bushel to 41.1 cents. Barley and flax showed little change. Flour at Montreal declined 10 cents per barrel to \$5.70. Granulated sugar at Montreal was unchanged at \$4.71 per cwt. The price of Ceylon rubber at New York rose from 12.9 cents per pound to 13.3 cents. In livestock, choice steers at Toronto declined from \$6.01 per hundred pounds to \$5.80 but advanced at Winnipeg from \$4.44 per hundred pounds to \$4.74. Veal calves at Toronto were up from \$8.56 per hundred pounds to \$8.97 and at Winnipeg from \$5.88 to \$6.18. Lambs also averaged higher, the price at Toronto rising from \$7.06 per hundred pounds to \$7.74 and at Winnipeg from \$5.82 to \$6.68. Bacon hogs showed a substantial decline at both Toronto and Winnipeg, the price in the former market

falling from \$8.94 per hundred pounds to \$7.99 and in the latter from \$7.92 to \$7.16. Eggs at Montreal rose from 40.3 cents per dozen to 43.5 cents and at Toronto from 39.4 cents per dozen to 42.5 cents. Storage holdings of butter were about 13 per cent lower the beginning of November than at October 1st. At Montreal the price of creamery prints rose from 26.3 cents per pound to 27.4 cents and at Toronto from 25.5 cents per pound to 27.2 cents. Raw cotton at New York averaged higher at 12.1 cents per pound as compared with 11.3 cents in October. Raw silk was 10 cents per pound higher at \$2.25 and raw wool was 1 to 2 cents per pound higher at a price range of 18-19 cents according to grade. In non-ferrous metals electrolytic copper declined from \$9.54 per hundred pounds to \$9.41.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the October issue of the LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1930=100, was 91.1 for October, an increase of 1.7 per cent for the month. In every one of the eleven groups an increase was recorded, the larger increases occurring in cereals, non-ferrous metals and textiles.

The *Statist* index number, on the base 1867-1877=100, was 85.8 at the end of October, an increase of 0.8 per cent for the month. Except for a rise of 2.9 per cent in textiles, the changes in all groups were small. The only decrease was one of 1.5 per cent in animal food.

**COST OF LIVING.**—The Ministry of Labour's index number, on the base July 1914=100, was 147 at the beginning of November, an advance of 1.4 per cent for the month due to higher food prices, chiefly prices of eggs, butter and bread, also in bacon and cheese, while fish was a little cheaper.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base of July 1914=100 (gold index) was 71 for October, an advance of one point for the month. Foods, on the whole were unchanged, but all three groups of industrial materials were

higher, the chief increase being in the textile group.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 102.8 for October, an increase of 0.5 per cent for the month. Among the sixteen groups, five were unchanged from the September level, while the other eleven groups all registered increases, among which rubber advanced 7.5 per cent and non-ferrous metals 4 per cent.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 122.8 for October, a decrease of 0.5 per cent for the month, due entirely to lower food prices, as there were very slight increases in rent, in heat and light and in clothing.

### Italy

**WHOLESALE PRICES.**—The Milan Provincial Council of Corporate Economy index number, on the base 1913=100, was 337.39 for September, an advance of 2.5 per cent for the month with increases recorded in every group except chemical products which were slightly reduced.

### United States

**WHOLESALE PRICES.**—*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the sum total of the prices per pound of 96 commodities of common consumption was \$10.2834 at November 1, an advance of 1.1 per cent for the month. Breadstuffs, livestock, provisions and fruits all showed declines, chemicals and drugs were un-

changed, but the other eight groups all advanced.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the cost *per capita* of a year's supply of commodities in wholesale markets, was \$178.614 at November 1, an advance of 0.6 per cent for the month. This is the highest figure reached for five and one-half years or since April 1, 1930.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Alleged illegal disbursement of compensation

Action was taken before the Ontario Supreme Court for alleged illegal division of a pension by the provincial Workmen's Compensation Board.

The plaintiff was the recipient of compensation under the Workmen's Compensation Act, R.S.O. 1927, c. 179. Before the Police Magistrate at Sault Ste. Marie on June 8, 1929, he was charged under s. 242(3) of the Criminal Code, and was found guilty and was ordered to pay the sum of \$35 per month for the maintenance of his wife and children.

Sometime later the plaintiff was again summoned under the provisions of the Deserted Wives' and Children's Maintenance Act, R.S.O. 1927, c. 184, and under such proceedings was directed to pay the sum of \$15 per month for the maintenance of his wife and children.

Copies of both orders were delivered to the defendant Board and, acting under powers conferred upon the Board by s. 47a (b) of the Workmen's Compensation Act, R.S.O. 1927, c. 179, as enacted by 1928 (Ont.), c. 26, s. 2, the Board diverted, not the sum of \$15, but the sum of \$35 per month for the maintenance of his wife and children.

The plaintiff contends that the first order was under the provisions of the Criminal Code was not made by a Court of competent jurisdiction as is required by sec. 47a (b) of the Workmen's Compensation Act.

The plaintiff commenced the action, claiming "damages for illegally diverting part of the plaintiff's pension or in the alternative for an accounting as to the amount of the plaintiff's pension diverted to the plaintiff's wife or family and for payment to the plaintiff of the amount so diverted, with interest."

In the opinion of Hon. Justice Hope of the Supreme Court, the order of the magistrate, purporting to be made under the authority of the Criminal Code is not one made by a court of competent jurisdiction. He also expressed astonishment "that the Board has

COST OF LIVING.—The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 139.1 for October, a very slight decrease from the September level due to lower food prices, although clothing and fuel and light showed advances.

followed the course it has in the light of the subsequent maintenance order for \$15, and contended that "if this order requires variation by way of increasing the amount, it can be properly varied on a further application." However, he considered that the "action as framed is undoubtedly in tort and such action is not maintainable against the Crown."

In dismissing the action (without costs) the Court held that a support order of a Magistrate under the Deserted Wives' and Children's Maintenance Act is not one of a 'court of competent jurisdiction' within the meaning of s. 47a of the Ontario Workmen's Compensation Act, as would warrant the Compensation Board to honour it and apply compensation pensions in payment of it. But the Board, being an agency of the Crown, is not subject to an action in tort for the illegal diversion of the pensions; nor is such action of the Board subject to review by the Courts by virtue of ss. 12 and 67 of the Act.

*Nadeau v. Workmen's Compensation Board*, Ontario Supreme Court (1935) 4, *Dominion Law Reports*, 442.

### Claim for wages under Collective Labour Agreements Extension Act

A worker employed on construction of a conduit for the City of Montreal claimed arrears of wages to the amount of \$28.65 for 286½ hours of work. While employed he was paid and accepted a rate of 25 cents an hour, which was 10 cents an hour less than the rate set by the wage schedule of the building trades under the Collective Labour Agreements Extension Act.

Action was instituted in the Circuit Court for the recovery of the difference and the judge held that a person engaged to work as labourer on the construction of an underground conduit for electric lines in the City of Montreal is entitled to 35 cents per hour as provided by the Collective Labour Agreement for the building trades.

The Court, therefore, ordered the defendant to pay the plaintiff the sum of \$28.65, with interest from November 29, 1934, and costs.

*Sekel vs. Kelley* (1935), 73 *Rapports Judiciaires de Québec*, Cour Supérieure, 396.

#### **Wage Claim under British Columbia Male Minimum Wage Act Sustained**

An employee in the golf club department of a retail leather goods establishment at Vancouver took action to recover wages under the British Columbia Minimum Wage Act, administered by the Board of Industrial Relations.

The company, while operating a wholesale and retail leather business also manufactured and repaired golf clubs as a subsidiary line. It was in this activity in which the employee was engaged. He claimed that his employer's

business came under the classification of "mercantile industry" within the meaning of the Act, and that by a Board order effective August 10, 1934, minimum wages of \$12.75 per week were established for every employee in that industry. The plaintiff further claimed that between October 5, 1934, and April 5, 1935, the company only paid him \$6 per week, whereas under the Board order he was entitled to \$12.75 per week. The plaintiff instituted action before a county court judge for the balance, namely \$174.37.

The county court judge sustained the plaintiff's claim whereupon the defendant company carried the case to the British Columbia Court of Appeal. The appeal was dismissed.

*Stevenson v. British Columbia Leather Company*, British Columbia Court of Appeal (1935) 4, *Dominion Law Reports*, 143.
